"Suppose, for example, this farmer decides to bring into the neighborhood another custom thresherman, a competitor of the thresheman living in the neighborhood. This makes the local thresherman angry and causes neighborhood quarrels; but not only that, when a competing machine enters the neighborhood, the local thresher will pull back into the neighborhood. This means that there will not be help enough to man both machines, and both will have to run short handed, which is expensive business for all concerned. I have seen three threshing machines in one neighborhood, all within a mile of each other, not being run efficiently because there were not men enough to help.

"When threshing from the shock with the modern large threshing machine it takes anywhere from 16 to 24 men to keep the machine running to capacity. It is not hard for one to figure that this is very expensive business for the farmer, tb say nothing of the labor on the part of the housewife to feed such an army of men."

---

JOBBERS should take notice of the fact that a used car year always means a big accessory year. This point is brought out very clearly in an article in The Jack Pot, house organ of the Elite Mfg. Co., which follows in part:

During the closing year of the war a new car was a mighty difficult thing to buy. The war's demand on the car builder has now eased up considerably. Still, it will be some time before the automobile manufacturers can switch their machinery over from war work to regular production. The automobile industry—third largest in the country—has no fear of a collapse in 1919, and you can easily understand why, when it is considered that there are right now ten buyers for every car that can possibly be built in 1919. As a result of high wages, unlimited overtime, and accumulations of Liberty Bonds, and War Savings Stamps, a new class of auto owners has sprung up. From the cotton fields of the south, where the colored race is buying Hudsons, Cadillacs, etc., to the Pittsburg munitions worker who rides to work daily in his own Packard; from the ship yards and canneries of the Northwest to the powder mills of New Jersey and Delaware, the workers are driving to work in their own automobiles.

Where does this affect you, Mr. Jobber?

Only about 25 per cent of this class will be able to secure a new car. As they have determined on owning a machine this will not stop them. They will buy used cars. Aha! This is where you come in, for whoever heard of finding a complete kit of tools in a used car? Further to swell your bank account, the man who now owns a one or two-year-old car is going to paint and fix it up to run till he is able

See to it that your dealers use their local papers and follow up their newspaper advertising with clean attractive letters mailed direct to the homes of the business men, farmers, mechanics, etc., who now own cars and those who may buy cars this spring, calling attention to their complete stocks and inviting them to come in and browze around. A clever window trim will top off this work just right.

Then you do your part. Buy now, so that you may be sure of a complete stock when your dealer's orders roll in. And let your dealers know you have enough confidence in the U. S. A. to go ahead and buy your stocks.

---

### Brunswick-Balke Collender Changes

H. G. Vanderhoef has been promoted to general sales manager of the hard rubber and electric storage battery jar department of the Brunswick-Balke-Collender Co., Chicago, Ill. Sam J. Turnes, advertising manager, becomes general sales manager of the tire department, to succeed John W. Maguire, who has resigned to engage in another line.

---

### Firestone Expand

Stockholders of the Firestone Tire & Rubber Co., Akron, O., have been asked to vote on an increase in capitalization from $15,000,000 to $75,000,000, of which two-thirds is to be preferred and one-third common stock. Ten million in preferred will be sold at once to enlarge the plant, officials state.

### Toledo Girls Win Cup at Y. W. C. A. Industrial Convention

The accompanying picture shows the loving cup presented to the Toledo delegation of girls who attended the Y. W. C. A. convention on Industrial and Mercantile Clubs of Ohio and West Virginia held this year at Western College, Oxford, Ohio.

CUP WON BY TOLEDO GIRLS AT Y. W C. A. INDUSTRIAL CONVENTION

Of the twenty different delegations present, the Toledo girls had the honor of carrying off the cup presented each year by the Self Government Committee. It signifies that the winners were the best disciplined group of girls at the meeting. In other words, that they observed the rules and regulations to the letter.

Fifteen girls represented the Toledo branch of the Y. W. C. A. at the meeting, among them, six from the factory of the Champion Spark Plug Company.

### Former Aviation Officers Design New Light Car

Sidney Waldon, formerly vice-president of the Packard Motor Car Co., and later colonel in the Aviation Section, and E. H. Sherbondy, former experimental engineer of the Air Service, have taken an office in Detroit, where they are designing a light-weight car embodying many advanced engineering ideas. It is not expected that the car will be on the market until next summer.

### Midland Tire Will Expand

Directors of the Midland Tire Co., Cleveland, have decided to increase the capacity of the plant. Two shifts of men now are working and a third shift is to be added soon. The plant is turning out 250 tires a day and soon will start making inner tubes.

The Midland company took over the McClurg Rubber Co. in 1916, and is continuing to make the McClurg tire.

### Fruehauf Expands

A five-acre factory site has been purchased by the Fruehauf Trailer Co., Detroit, just east of its present location on Gratiot Avenue. A new plant will be erected shortly, President Fruehauf announced. It is planned also to invrease the capital stock from $100,000 to $250,000.

## The Duke of Dealers

Doing things by Halves is the shiftless way. It never brings Success. If you are so afflicted there is one consolation—the best Half of the year is at hand.

The annual epidemic of Spring Fever disappeared with the Flu. Vacation days and sunburnt necks are fading. The peak of the Summer is behind us. And Palm Beach suits are selling at Half-price, clearly discerning the first suggestion of early Fall.

Many a ball game has been jerked out of the oven in the Last Half of the 9th. Many a Gridiron victory has been garnered in the Closing Half of the contest. And it is painful and needless to recall that the late War was heroically won after the Foe had piled up an alarming advantage in the First Half of the squabble.

If up to date you have failed to reach the mark you set in January—get busy! Bring on your expeditionary force of Reserve Energy. Trot out your wrecking crew and win the game before the final frame. Get on. Then score.

The law of averages is as infallible in Selling Automobiles as in war or baseball. Your opponent cannot win continuously unless you let him scare you into Half-hearted endeavor.

Look at N. Bonaparte and some of the fast stuff he put over. Why this kid from Corsica had all of Europe humbugged until he took an order at Waterloo too big to fill. Every nation within fighting distance had been his Prospect. Every flag his bath-towel.

Wellington hadn't made a Sale since the appearance of his latest models; the Belgians had failed to take an order since the Auto Show; the Dutch were turning back carload shipments to the factory and old Blucher, always late for demonstrations, was away behind on his drawing account.

Suddenly the boys got together at a Dealers' Meeting and gave the Corporal an awful dusting.

If you have been pressed or oppressed by Competition it's time to do a little Dusting. If the car you sell is not predominating in your territory it is the fault of your Salesmen and Yourself. Competition is just as impregnable as you admit it to be. Wellington proved that and Foch confirmed it.

If you were trimmed in the First Half of 1919 make the remaining Half a Waterloo for your business rivals.

Arm your Salesmen for the big campaign. Instill them with the firm belief that their Car, their Organization and their Ability is Superior to any in the field.

Be the Duke of Dealers and ship Competition to St. Helena!—From *The Punch* (Maxwell-Chalmers House Organ).

### Bickel Becomes Branch Manager of Bearing Service

The Bearing Service Company, of Detroit, Michigan, has announced the appointment of E. W. Bickel as manager of the company's branch in St. Louis. Previous to his appointment to the St. Louis branch management, Mr. Bickel was traveling representative for the company in the Indianapolis territory.

### Practical Book Catolog

The Norman W. Henley Pub. Co., 2 West 45th street, New York City, has brought out its 1919 Practical Book catalog. Automobile books and charts published by the company are described in detail.

# Where the strength of Wood carries the dead weight of metal

A metal-boom, in order to have the same strength as a wood-boom, must be twice as heavy.

And even then, the hidden and undetectable flaws of metal might cause sudden collapse and disaster.

So the wood-boom is still supreme—just as the WOOD Wheel remains superior to any other type of wheel.

For WOOD Wheels alone combine the necessary strength with that lightness and that resiliency which are so vital to the perfect performance of your truck.

And the combination of those qualities—unique in WOOD Wheels—results in longer life of the truck and its parts, lower running-costs, and the possibility of considerably increasing your pay-load.

AUTOMOTIVE WOOD WHEEL MANUFACTURERS' ASSOCIATION

# PIERCE GOVERNORS

## Just as Important as Steel Springs or Rubber Tires

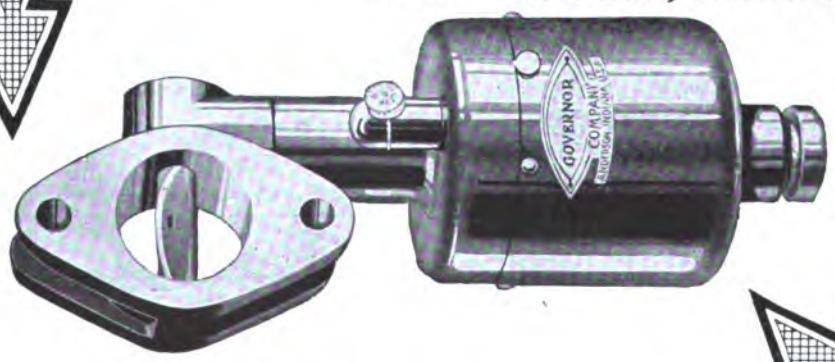
The purpose of springs, rubber tires and governors is to avoid vibration — the most destructive element known in mechanics.

Fast driving of trucks, with their stiff springs and solid tires, is just as disastrous as driving at the proper speed without springs or tires. Furthermore, speeding is the cause of 76 per cent of all truck accidents.

Pierce Governors positively stop this abuse, increasing the life and efficiency of any truck and cutting maintenance costs in half.

That's only ONE of the reasons why 93 truck manufacturers have made Pierce Governors standard equipment.

## The Pierce Governor Company
### Anderson, Indiana



*World's Largest Governor Builders*

THE building of a motor truck designed in its entirety to uphold the reputation of its makers in the hardest service a commercial vehicle can be called upon to perform is a worthy challenge to any manufacturer.

Ten years' experience had given us the proper background, a study of the best commercial vehicles in use and a vivid comprehension of the requirements furnished our designers and engineers the material to work with.

The first step in the solution of any problem is to know that there is a problem, then to find out what the problem is. From our constant contact with truck users we are fully aware that the problem to be solved was how to design and build a motor truck strictly commercial in its ability to yield long service, strictly commercial in its dependability, and strictly commercial from the standpoint of simplicity and accessability; moreover, such a motor truck construction should necessarily feature positive lubrication to every working part, the power plant must have efficient cooling and the development of ample power at moderate speed with the use of low-grade fuel.

The policy of the **MARSHALL** Manufacturing Company is not to do things just to fit the ideas of the engineers, office force and the president of the company, but to think with the truck dealers, and truck drivers, who come daily in contact with the little troubles. We all must act together, think together. Toward this end we must have some common means of intercourse whereby we can have an exchange of ideas and opinions. We like to meet real truck people who can discuss our grievances and problems.

In the **MARSHALL** vehicle you will find every economy, greater strength, longer life and energy than most of the trucks of today. It is our aim to build every **MARSHALL** vehicle to please—built right to stay right.

***DEALERS:—***

**If your town or city has no MARSHALL dealer, wire for our Co-operative Selling Policy**

# MARSHALL MANUFACTURING CO.,

**780-782 North Milwaukee Avenue**

## The Eternal Triangle

There have been dramas and movies galore b the idea of the eternal triangle and each one p the disruption of a peaceful quiet home by the ance and persistent attentions of the inevitab party.

Regardless of whether or not the erring me the disrupted household be the husband or th the ultimate aim of the author is the eliminatio trouble-brewing third party, and the ultimat reunion of the originally peaceful family. Ot it would not be a good movie.

A. C. Burch, sales manager of the Clyde Ca pany, when being interviewed recently, gave a illustration of the labor and material situation as to the manufacture of motor trucks, which re the eternal triangle of modern fiction. Mr. Burc

"There are three angles of the present mate labor situation which remind me of the 'eternal t of modern fiction. The three angles are the hi of living, the cost of labor and the cost of mate

"First, the workmen find the cost of living that they demand higher wages which they get l means or other. The manufacturers of various als are then forced to increase their prices c finished product to make up for the extra cost o Then it works back around so that it costs r produce food products and up again goes the hi of living.

"After wrangling among themselves, the thr tions find themselves in exactly the same situa before, and go through the whole process agai the result that prices of everything from a too to a locomotive are going up.

"It was anticipated by many that after the wa of motor trucks would decline, but much to th prise there was no drop, nor do I believe there If there is any change at all it will go up rath down, and if the eternal triangle keeps up w wrangling there is no doubt but that truck pric go up, for there are two determining factors wh the price of motor trucks, and they are the cost terial and the cost of labor. If these two costs c to advance there is only one thing for the truck facturer to do, and that is become a part of the himself.

"But, as in the movies, it must turn out all ri never was there as much money in circulation, n great prosperity in every line of business, or i social strata, and it is certain that this prosper continue until conditions gradually adjust the and we arrive at the proper balance between the factions of the triangle."

## Keystone Re-elects

Directors of the Keystone Tire & Rubber C York City, were re-elected at the annual stockh meeting as follows: L. Walter Lissberger, Joel Sydney Bernheim, Nathan J. Miller, Julius Licht Benjamin Lissberger and Walter Loewenthal. rectors elected the following: President, L. Walt berger; vice-president, Sydney Bernheim; tr Joel Jacobs; secretary, Walter Loewenthal.

J. A. Massie, for several years sales manage Hoyt Electrical Instrument Works, Penacook, has retired from active service with the compa will retain his interest in the Burton-Rogers Co has been made the sales department for the with M. T. Rogers taking over Mr. Massie's Mr. Massie will take a rest for some time.

The Nelson Motor Truck Company, Saginaw, Mich., announces changes of construction along slightly heavier lines, making possible an increase in the rating of the Jumbo model D trucks from 4,000 to 5,000 pounds. Several equipment improvements are also announced, including installation of a new lubricating system, and the chassis price has been increased from $2,500 to $2,700.

---

The Detroit Pressed Steel Co., Detroit, has taken oven the Carlton Avenue plant of the Detroit Shell Co., as an addition to its present plant. This will provide larger quarters for the division which manufactures Disteel wheels.

---

The American Motor Truck Co., Newark, Ohio, is erecting a new concrete building to provide enlarged capacity for its administrative department.

---

Work is progressing rapidly on the new concrete factory of the Monarch Rubber Co. at Hartville, Ohio. The new plant will increase the capacity from 175 to 700 tires a day.

---

At the regular monthly meeting of the board of directors of the Stewart Motor Corp., Buffalo, N. Y., a quarterly dividend of 2 per cent. on preferred and 2½ per cent. on common stock was passed.

---

SKF Industries, Inc., 165 Broadway, New York City, announces the establishment of a Chicago District office, in charge of Mr. John B. Castino, at No. 1314 Marquette Building, Chicago.

---

The Owen Tire & Rubber Co., Cleveland, is planning to increase its factory capacity in order to catch up on orders.

---

Manufacture of the Owen Magnetic at the Cleveland plants of the Baker R. & L. Co. will be given up, according to a recent announcement and undertaken by the International Fabricating Co., at Wilkes-Barre, Pa. The details of the new arrangement were made public by R. M. Owen, of the Owen Magnetic Car Corp., designer and builder of the car. The announcement revealed that the Owen company had been entirely divorced from the Baker corporation and that its production in the future would be carried on independently from that of the electric cars of Baker.

---

### DuPont to Make Car

The duPont Motor Mfg. Corp., Wilmington, Del., has been formed with E. Paul duPont as president, to build motor cars. This concern has no connection with what are generally known as "duPont interests" and which control General Motors. E. Paul duPont is associated with the Ball Grain Explosive Co., of which Alfred I. duPont is president, and is president of the Delaware Marine Motors Co. here. Arthur M. Maris, vice-president and general manager of the duPont Motor Mfg. Corp., was with the Biddle Motor Car Co. of Philadelphia until he went to war in 1917. John A. Pierson, chief engineer, was formerly with the Wright-Martin Co.

The first car is to be a four-cylinder, in which it is said the best foreign and domestic ideas will be embodied. It is hoped to have it ready for the next New York show. A six-cylinder may follow.

### Templar Enlarges Plant

The Templar Motor Car Co., Cleveland, Ohio, is increasing its plant and building up its passenger car business. H. W. Anderson, sales manager, states that about 1,800 cars will be built this year and plans for a 10,000 production in 1920 are being made. Anderson states that the company has about six acres under roof, and plans are being drawn for additional buildings. One of the plants just finished is the enameling building.

---

### Three Makers Form New Organization

A $5,000,000 passenger car and truck company has been formed at Jackson, Mich., through the merger of the Jackson Motor & Manufacturing Co., Jackson Automobile Co., and the Four-Wheel Drive Truck Corp., of Chicago and Port Jefferson, L. I. The new company will be known as the Jackson Motors Corp. It will manufacture both cars and trucks, planning to produce during the next 12 months 4,000 automobiles and 1,200 four-wheel-drive trucks of 3½-ton capacity.

The concern will occupy the present plant of the Jackson Automobile Co., and will employ about 1,000 men. The proposed passenger car to be turned out will be of the 6-cylinder type. The company is now operating on a contract with the General Motors Corp. to finish 10,000 coupé and sedan bodies involving a production of 40 bodies daily.

The officers of the new organization are: President, H. A. Matthews, Jackson, Mich.; vice-president, W. W. Sterling, Boston; secretary, Carl L. V. Exselsen, Chicago; treasurer, F. O. Evans, Chicago.

---

### A Lesson Learned From War

"Insufficient transportation did more to retard the rapid and efficient entrance of the United States into war than could a legion of Huns," says M. B. Hoagland, sales manager of the Signal Motor Truck Company, Detroit, in pointing out that we should take every possible advantage of our experience in wartime.

"We have facts and figures which show that about 80 per cent. of the output of motor trucks during war time were used in war work or related war activities.

"The United States Government has recognized the importance of the motor truck, both for military and so-called domestic uses. War Department Order No. 38, established the Motor Transport Service for war trucks. The Highways Transport Committee, serving as part of the National Council of Defense, was organized to divert all possible traffic to the highways.

"Every truck put into service brings the manufacturer nearer his market, brings the farmer nearer the consumer, brings the finished order nearer the shipping point, facilitates rapid filling of orders, restores gaps in organizations occasioned by deficiencies of labor, material and transportation.

"It is only in times of emergency that great Generals are produced; the same in business—it takes an emergency to bring out the real ability of an executive. And while motor truck transportation had already made wonderful strides, it remained for the emergency of war to indelibly impress upon the world the vital importance of this means of transportation."

---

### Name New Heads for All-American

Paul Klein-exel was elected president and general manager of the All-American Truck Co., Chicago, at a recent directors' meeting, replacing R. H. Spear, resigned. Otto Bruenauer was made vice-president in charge of sales and engineering, and R. J. Sutton, vice-president in charge of manufacturing.

*Buffalo, N. Y.—A new Prest-O-Lite charging plant.*

# Convenient Producing Plants

## *The Backbone of Prest-O-Lite Service*

NATION-WIDE Prest-O-Lite Service brings straight to the user's hands a single cylinder of highest-temperature gas—or hundreds of cylinders—

Such a Service must have a backbone strong enough to carry the tremendous load of national demand, flexible enough to meet the ever-changing needs of any one of an army of users.

## 40 Plants and Warehouses Supply

Prest-O-Lite

**DISSOLVED ACETYLENE**

Wherever you may be located, however large or small your requirements, there is an efficient Prest-O-Lite *producing* plant near—ready to serve you quickly and well.

**THE PREST-O-LITE COMPANY, Inc., General Offices 30 East 42nd Street, New York**
**Kohl Building, San Francisco**
***In Canada—Prest-O-Lite Co. of Canada, Limited, Toronto***

### Universal Ammeter

The Universal ammeter, offered by the Roller-Smith Co., 233 Broadway, New York City, is designed especially for use with electric systems installed on old cars not originally so equipped, or to replace damaged or unsatisfactory instruments already installed. It can

be used on any make or tvpe of system, no matter what the voltage is. The instrument is of the flush type and is finished in black. The diameter of the body is 2 inches. It is furnished with a complete set of mounting screws, nuts and washers.

---

### Aluminite Piston

Aluminite pistons are offered in different sizes and types to fit all makes of engines by the Green Engineering Co., Dayton, Ohio. The company states the pistons are made of an aluminum alloy of sufficient

strength to withstand all strains and of sufficient hardness to give good bearing surfaces. In the formula of the alloy and in the design of the piston the feature of expansion, which is greater than that of iron, has been successfully dealt with, it is stated. The piston is provided with ribs which are independent of the piston wall, as will be seen in the illustration.

### Woodworth Auto Lock

The Woodworth auto lock consists of a heavy steel chain having links 2 inches wide made of ½ inch steel with a Yale tumbler lock for locking the ends together around the tire and rim. The Chain is covered with leather where it comes in contact with the paint. It is recommended that the Chain be used on the right front wheel.

This Lock does not prevent the car from being moved in case of fire as is required by the city ordinances, it is stated, but effectually prevents stealing, for it causes such a bumping that the car cannot be run except very slowly and the chain makes such a clattering sound that the attention of the police would immediately be called to it.

In an emergency the lock can be used as a mud hook.

---

### Testing Outfit for Liberty Spark Plug Dealers

Casey Hudson Co., Chicago, makers of Liberty spark plugs, is offering its dealers a very compact and useful testing outfit. It tests spark plugs, automobile lamps,

horns, Ford coils, etc., and is useful in a score of ways around a garage or accessory store. The particular reason for offering this testing outfit is to demonstrate the firing efficiency of the Liberty spark plug. Inside the porcelain of this plug, in a vacuum, is a spark gap intensifier, which, it is stated, increases the strength of the spark to such an extent that it fires through oil or carbon.

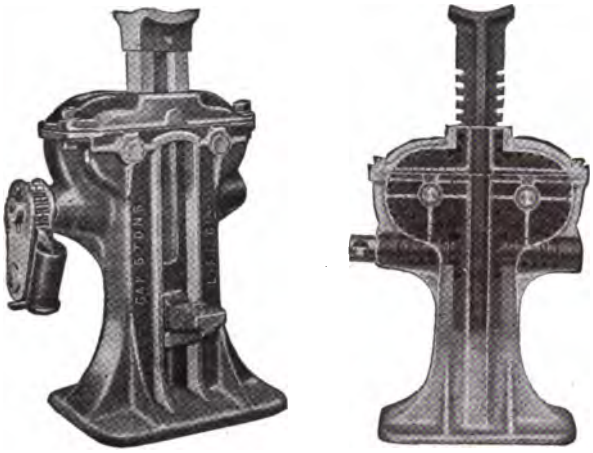
### Rees Double Worm Drive Jack

A new application of the worm drive principle is being made by the Iron City Products Co., Pittsburgh, Pa., in its line of Rees double worm drive lifting jacks. In these jacks, instead of there being a single worm gear pinioned to a lifting bar, there is employed the

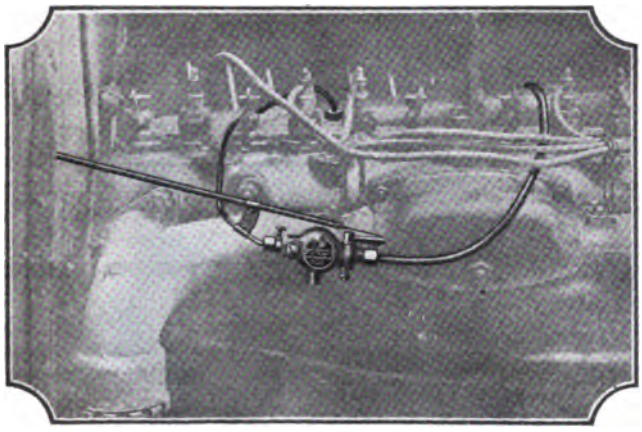


"double worm" principle, in which a right hand and a left hand worm are cut on the worm shaft which meshes with right and left hand worm gears. These gears carry heavy pinions between which the lifting bar, having a double set of teeth on either side, is raised or lowered by the double action of the component sets of gearing, with extremely small effort and without loss of friction due to unbalanced thrusts on the worm shaft or lifting bar.

Simplicity and strength mark the construction of the jacks. There are only four working parts in the litting mechanism, all of rugged proportions and there are no small parts to get out of order.

### Automatic Steam Carbureter

The Automatic Steam Carburetor makes live steam, mixes it with the heated air of the exhaust pipe by means



of an automatic air valve, and injects this combination into the intake manifold between the gasoline carburetor and the engine. The steam and hot air mix the gasoline into a perfect vapor, it is stated. The moisture laden mixture is carried into the cylinder where it is said to soften up the carbon deposit and the following explosion carries it out of the exhaust pipe. The device is furnished with an automatic air valve to regulate the amount of air to suit any size of carburetor. Once adjusted its action is automatic. The device is made by the Automatic Steam Carburetor Co., 2488 Milwaukee avenue, Chicago, Ill.

### Greyhound Cord Tires

The Ideal Tire & Rubber Co., Cleveland, Ohio, has placed a new cord tire on the market known as the Grey-

hound. The tread is attractive in appearance as will be seen from the accompanying illustration. These tires are made in all sizes and guaranteed by the company for 10,000 miles.

### R & S Cab

The importance of protecting the motor truck driver during bad weather by equipping the truck with a cab is not realized by many. Nobody can do his best work under unfavorable conditions, and it stands to reason that time will be wasted and money lost when a driver has to operate his truck while exposed to rain or snow, or sweltering in the sun. When the driver is protected

at all times, on the other hand, he can continue his trip in spite of weather conditions.

For the above reason the General Woodwork Co., 1225 Budd St., Cincinnati, Ohio, claims its R & S cab for trucks is a necessity rather than a luxury. The cab comfortably seats three men and is of rigid construction, the sides being swelled and the body curved from back to front. All openings are of the drop sash type. The door is suspended on ball bearing rollers running on double tracks and can be removed quickly when desired.

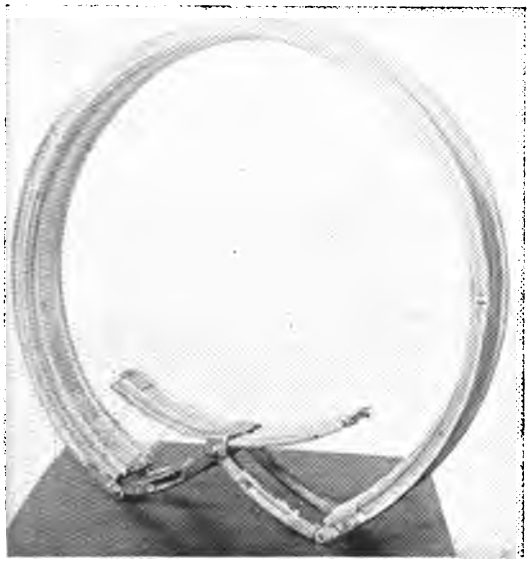
### Automatic Rim

The Automatic Rim Co., Cleveland, Ohio, is placing on the market a new type of automobile rim which, it is claimed, has many advantages over the rims now in use The design is exceedingly simple. In order to change an automobile tire no tool is necessary when this rim is used. The tire is placed on the rim and a slight pressure of the foot on the patented arrangement fixes the tire firmly in place with no possibility of coming loose, it is stated.



There are no locks, bolts, nuts, springs or rings on the rim and it is stated the tire cannot stick. It is designed for use on all passenger cars and trucks using pneumatic tires.

---

### "Handy" Volt-Ammeter

The "Handy" automobile type volt-ammeter for electric starting and lighting systems is offered by the Roller-Smith Co., 233 Broadway, New York City. The case is drawn brass and the base close grained wood

so the instrument can be laid on a battery without "shorting" it. The binding posts have non-removable tops. Dimensions of the instrument are 4 by 5 by 2 inches and the weight is 2 pounds 8 ounces.

### Duplex Compression Tester

Casey Hudson Co., Chicago, Ill., is bringing out a new accessory for testing cylinder compression. The Duplex cylinder compression tester, as it is called, is

made to fit any cylinder using a half-inch or seven-eighths spark plug. It is used with a Schrader or Twitchell tire gauge. By taking out the spark plug and inserting the tester, and turning the motor by hand with a swinging stroke, the compression is registered. All cylinders can be tested quickly, and the weak cylinder, if there is one, instantly detected. The experienced mechanic can find out through the use of the tester if valves need regrinding, if piston rings do not fit tight, or if gaskets leak compression.

---

### Steward Visible Gas Filter

Dirt in the gasoline, which is carried through the fuel line to the carburetor, clogging up the needle valve, is a

frequent cause of engine trouble. The Steward visible gas fitter, offered by the Automotive Material Co., 20 East Jackson Boulevard, Chicago, Ill., is designed especially to overcome this trouble by catching all the dirt before it enters the vacuum tank and carburetor, a fine brass cloth screen, letting nothing through but clean, filtered gasoline, which overflows through a glass receptacle. The receptacle is made of glass in order to make it easy to see when the filter needs cleaning. The device is attachd to the top of the vacuum tank where it is accessible for cleaning. It can be attached in about three minutes with the same fittings provided with the tank.

### Duesenberg in New Willys Corporation

Announcement that the Duesenberg Motors Corp. will be one of the subsidaries of the new Willys Corp., the formation of which to contain the holdings of John N. Willys was made public recently, has just been made by officials of the Duesenberg company. The announcement, although brief, indicates that the proposed six-cylinder Willys car, already designed by the Willys-Overland interests, will be produced at the Duesenberg plant.

The plant of the Duesenberg company is located at Elizabeth, N. J., with general offices in New York City. It has been a subsidiary corporation of the American Can Co. No details of the financing involved in the transfer were announced, except that the Duesenberg company was completely taken over by the Willys corporation.

Production of the Willys Six in a factory outside of the Toledo plant of the Willys-Overland Co. already had been forecast, but its location had not been given out previously. It is believed production will be under way shortly and that the car soon will be placed on the market.

Confirmation also has been obtained that the Electric Auto Lite Co., of Toledo and the New Process Gear Corp., of Syracuse, N. Y., also will be units of the Willys corporation.

### Same Week for 1920 Car and Truck Shows

The 1920 passenger car and truck shows, held simultaneously, but in widely separated buildings will constitute the annual winter's exhibitions for both New York and Chicago. This radical departure from the plans of last year were announced recentlyl by officers of the National Automobile Chamber of Commerce, the organization that will supervise again the showings after a lapse of two years.

The exhibitions will be held under the following schedules:

New York January 3 to 10. Passenger cars and accessories at the Grand Central Palace. Commercial cars and accessories at the Eighth Coast Artillery Armory.

Chicago, January 24 to 31. Passenger cars and accessories at the Coliseum and First Regiment Armory. Commercial cars and accessories at the International Amphitheater.

### E. Edelman & Co. to Build $250,000 Factory

E. Edelman & Co., Chicago, Ill., manufacturers of automobile accessories, have purchased from the Chicago Title and Trust Company a total of about 160,000 square feet at the southwest corner of Crawford and Shubert avenues for a reported consideration of $80,000. The property has a frontage of 217 feet on Crawford avenue and an average depth of 700 feet on Shubert avenue, with switch track connection with the St. Paul track available. Plans have been prepared for improvements costing in the neighborhood of $250,000, but it is stated work will not begin until more favorable building conditions prevail. In connection with the proposed improvements, Mr. Bowes has negotiated a bond issue loan of $225,000, ten years, at 6 per cent.

### Lerch Superintendent of India Tire & Rubber

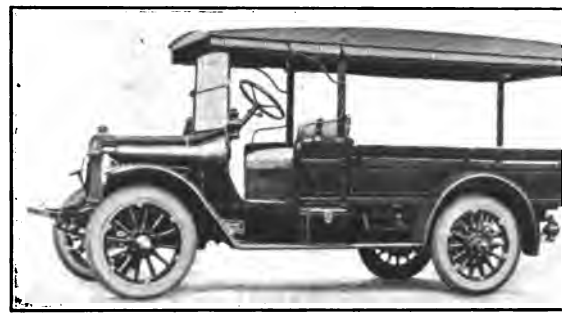
William G. Lerch has been made superintendent of the India Tire and Rubber Co. He was for nine years assistant superintendent of the Miller Rubber Co.

### Milton in Duesenberg Wins Elgin Race

The Elgin race held at Elgin, Ill., on August won by Milton in an eight-cylinder Duesenberg average speed of 73.9 m. p. h. for the 302 mile ton finished 25 minutes ahead of Sarles in a Special. Others finishing the race were Schill Mercer, third; Vail, in a Philbrin, fourth; Hitl Roamer, fifth; Harvey, in a Peugeot, sixth, and in an Oldfield, seventh. Lack of fast competitio latter half of the race prevented the establishme new record.

### New Model 11 Stewart Truck

Many improvements are to be found in the new A three-quarter ton truck offered by the Stewart Corp., Buffalo, N. Y. The loading space has b creased 6 inches and an electric starting and system installed. The cowl has been improv



MODEL II STEWART TRUCK

heavier springs and axles are used. The price o is but $100 more than the old model.

The engine is of the monobloc type and has c with a bore of 3⅛ inches and a stroke of 4½ A combined force feed and splash oiling system with a plunger pump and direct acting oil leve The carburetor is a Zenith and ignition is furni an Eisemann high-tension magneto with fixed s Dyneto electric starter with Bendix drive and a mann generator are used. A three-speed select ing gear transmission, dry plate clutch and gear rear axle are other features. The truck wheelbase of 110 inches and the wheels are p with demountable rims carrying 32 by 4-inch pn tires.

### Fulton Truck Dealers Meet

At a meeting of the Midwest dealers and dist of the Fulton Motor Truck Co., of Farmingda and New York City, held recently in the Englis of the Blackstone Hotel, Chicago, there were from the factory, Carl H. Page, vice-president Kraham, sales manager; C. M. Strieby, adv manager, and supervisors,; Geo. O. Pound a Harris. Members of the dealers' organization company who were present, included L. W. Detroit; M. R. Sanborne, Kansas City; J. M. Omaha, Neb.; Jack Wolfley, St. Joseph, Mo., an Rose, Chicago, and the five Chicago retail sale

During two days of this, the first convention middle West for the Fulton Company, the deal ferred with Mr. Page, Mr. Kraham and with M by, from whom they secured first-hand knowl conditions from every standpoint.

### Loyal Truck Moves

The Loyal Motor Truck Co., Erie, Pa., has to 217-218 Marine Bank Building.

# Garford Announces New 1¼ Ton Truck

The Garford Motor Truck Company, of Lima, Ohio, announces the addition of a ton-and-a-quarter truck to its already extensive line. It is to be known officially as Model 25.

This latest Garford development is described as having ample wheelbase and body space. Provision has been made for the installation of electric lights and an electric starter.

The engine, of 22 horsepower, S. A. E. rating, has four cylinders 3¾ by 5⅛ inches, cast in one block, with heads and valve chambers integral. The valves are large and ample water jacketing is provided. With the valve location on the right side and the carburetor on the left, the gas passes through a water-jacketed section of the cylinder.

The engine is of sturdy design, employing a heavy crank shaft of the three bearing type, and cast iron upper and lower crankcases. The flywheel is enclosed in a housing integral with the crankcase.

The pistons of gray iron are provided with three concentric, tested compression rings.

The timing train is limited to three gears. This makes for quietness of operation. The magneto drive shaft is extended forward of the gear panel to drive the centrifugal water pump. When electrical equipment is required the magneto is driven in tandem with the generator, thereby eliminating the necessity of chains for this unit. The timing gears, which operate in oil, are helical in form and of very broad face.

The crank shaft and four long rod bearings are of the bronze-shell, babbitt-lined type. The upper rod bearings are hard bronze.

The oiling is of the constant level splash system. A gear pump driven by the cam shaft circulates oil through a steel tube system to the main shaft bearings, the overflow oiling the piston and cylinder. Lower rod bearings are oiled by splashers dipping into troughs filled by a feed from the gear pump.

Ignition both on the standard and the electrically equipped models is by straight, high-tension magneto. The magneto is controlled from the steering column. The spark plugs are located over the inlet valves.

Carburetion is obtained through a Stromberg one-inch float-feed carburetor. The throttle control is by foot acceleration as well as by hand throttle from the steering column.

The clutch is of the multiple dry-disc, ball-bearing type enclosed in a housing attached to the flywheel case. The transmission is a three-speed selective type with all gears and shafts constructed of 3½ per cent nickel steel, double heat-treated. The shafts are mounted on roller bearings throughout. The gear and shaft rods are on top the transmission case. As in all other Garford models the case is supported at three points.

The design of the Model 25 is characterized by its heavy shafts and large bearings. It provides for direct attachment of a power tire pump.

The front axle, of Garford design, is manufactured in its entirety in the Garford plant. It embodies a single piece drop-forging for the load carrying member and nickel steel knuckles.

The housing of the worm-drive rear axle is of one piece design. The axle shafts are 2⅝ inches in diameter at the bearing and have a splined fit in the differential. Timken bearings are used both at the wheels and differential.

The differential is of the bevel type. Combined with the worm-carrier it may be removed from the axle as a unit.

There are two independent sets of brakes operating on the rear wheels.

Radiator is of the heavy truck pattern. Upper and lower water tanks of cast iron are bolted to the vertical, finned tube, copper core. The radiator is mounted on a cushion suspension.

Steering is by screw and nut—an irreversible combination.

Front and rear springs are of the semi-elliptic pattern with leaves of chrome Vanadium steel.

The frame of 7/32-inch stock has a depth of 5 inches and a width of 2½ inches. It is of pressed steel construction and has six pressed-steel, channel-section cross members.

The standard tire equipment is of the solid pressed on type. The front tires are 36 by 3½ inches; the rear 36 by 4 inches. Pneumatic tires, which are particularly adapted to this new model, come as extra equipment.

A full set of tools is included in the price of the chassis, which is quoted at $1,890.

---

### Army Will Retain Ten Types of Cars

The Motor Transport Corps has announced that it will retain for use ten types of cars, trucks and trailers-which, however, will not be rated for the present as army standards. None of these vehicles will be placed in the surplus equipment list.

A statement by Brigadier General Drake gives the retained classes as follows:

Type 1—Passenger cars: Medium, open, Dodge; medium, closed, Dodge; heavy, open, Cadillac; heavy, closed, Cadillac.

Type 2—Light delivery truck: ½-ton light delivery, Dodge; ¾-ton, White; ¾-ton G. M. C.; 1-ton, White, Aebo.

Type 3—1½ and 2-ton trucks; White, Garford, Packard.

Type 4—3 and 4-ton trucks; Standardized "B"; Riker; Mack, 3½-ton trucks; F. W. D.

Type 5—5-ton trucks, or over; Mack, 5½-ton trucks; Mack, Special Engineer.

Type 6—Motorcycles: Harley-Davidson.

Type 7—Ambulances: G. M. C.

Type 8—Trailers, cargo: Trailers, ¾-ton, tank, water, 180 gallons; trailers, ¾-ton, ration and spare parts; trailer, 1½-ton, 2-wheel, light aviation; trailers, 1½-ton, 4-wheel, cargo; trailers, 1½-ton, 4-wheel, special bodies; trailers, 3-ton, gun and caisson; trailers, 4-ton, 4-wheel, cargo; trailers, 4-ton, 4-wheel, special bodies; trailers, 5-ton, tire press; trailers, 10-ton, portable crane; trailers, 10-ton, tank corps with ramp.

Type 9—Trailers, kitchen: Trailers, 1½-ton, 2-wheel, kitchen, A and B type.

Type 10—Trailers, machine shop: Trailers, 4-ton, 4-wheel, machine shop, spare parts.

Bicycles—Westfield.

---

### Kissel Increases Facilities

The Kissel Motor Car Co., Hartford, Wis., is equipping its body shop, used for several years as a storehouse, with new machinery for wood and metal work. A force of 175 to 200 body workers will be added. The body shop, built four years ago, has long been overcrowded.

---

The Ward Leonard Electric Company, Mount Vernon, N. Y., announce the removal of the office of its Philadelphia representative, William Miller Tompkins, from the Commonwealth Building to the Bourse Building, Machinery Exhibit, Philadelphia.

# THE ELECTRIC STORAGE BATTERY CO.

## The *Giant* Plant Behind The *Giant* Battery

Just as the "Exide" Starting and Lighting Battery is recognized as the *giant* battery, so is the Electric Storage Battery Company known as the *giant* among storage battery builders.

**Upon the performance of every**

# "Exide" Starting & Lighting Battery

"The Giant that Lives in a Box"

rests the reputation of the largest maker of storage batteries in the world.

Motorists throughout America realize what that means—just what it stands for in assured quality and dependability! They also realize that when they buy an "Exide" they get a battery whose every feature of construction is based on a battery building experience of over thirty-one years.

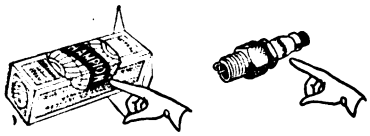
# Champion Dependable Spark Plugs

## There Is No Substitute For Champion Dependability

THE experience of over 240 manufacturers who equip their products at their factories with Champion Spark Plugs together with the experience of millions of owners of all types of cars, furnish you the safest guide when purchasing.

The great resisting power of our famous No. "3450" Insulator, together with our patented copper-asbestos gasket construction, and coupled with extreme care in manufacture, close inspection and rigid production tests, enable Champion Spark Plugs to stand up and keep going better and longer.

Now is the time for dealers to make sure their stock of Champion Spark Plugs is complete. Go over *your* stock to-day.



*Avoid substitutes by making sure the name CHAMPION is on the Insulator and the world trade-mark on the box.*

**Champion Spark Plug Company, Toledo, Ohio**

*Champion Spark Plug Company, of Canada, Limited, Windsor, Ontario*

# It's Easier to Sell Eveready Mazda

Just say "Eveready" to a motorist and you've clinched a sale. He's seen Eveready products advertised everywhere—he's used them, too, and *knows* how good they are.

And "Mazda" quality is world-known, of course.

So—when you say, "It's an EVEREADY MAZDA," to the customer who wants a bulb for his car, you've said the utmost about it—a thirty minute convincing sales talk in thirty seconds.

That's why these lamps stream across the counters of Eveready Mazda dealers.

Then too, the Eveready Mazda Auto Lamp Cabinet—the *new* all-steel fixture—pushes the sales over even faster.

If motorists come into your shop—no matter what for—you've a real chance to corral a lot of extra sales with a stock of Eveready Mazda Auto Lamps.

Let us tell you all about it—how other dealers are sales-building with this line. Write today for our proposition.

# An Ideal Battery Charger for Alternating Current

The 6-amp., 75 volt Tungar Rectifier will charge any combination of 3, 4, 5, 6 up to 30 cells at 6 or 7 amperes or less from alternating current.

It is a practical device demonstrated by actual service. It equips the garage for efficient battery charging at a much lower cost than any other reliable device of similar capacity. The Tungar Rectifier allows a good profit on battery charging.

The Tungar fastens to the wall thus taking up no floor space. It uses alternating current at a cost of but si · cents an hour for ten 3-cell batteries. It is self-starting, requiring no attend ant.

Fool proof, trouble proof and simple to operate, the Tungar Rectifier charges all sizes of storage batteries up to thirty cells.

# UNIVERSAL

## THE HEART OF YOUR STARTING AND LIGHTING SYSTEM

**Garage owners, service station and supply men—in fact, everyone who owns an automobile, should investigate**

## UNIVERSAL BATTERIES

**The Heart of Any Good Automobile**

are of the highest type. There is a complete battery for every popular make of car, and a repair part for every standard make of battery, which insures you the advantage of having all replacement and repair parts delivered promptly.

## UNIVERSAL BATTERY SERVICE

means other things, too, besides the prompt, efficient delivery of superior batteries. It means that we can quickly supply as well all other parts — plates, terminals, connectors, separators, etc. It means a saving of time and money for you.

Get acquainted with this complete, comprehensive service. Write for our interesting catalog and price list. A post card will bring it to you.

**Universal Battery Company**

**3436 South La Salle St.**

**Chicago, Illinois**

A Spectacular "Spike" Test.
A sales demonstration of electrical energy strong enough to melt steel.

# Two Homely Spikes Sell Mac-Lar for You

No automobile owner can resist the revelation of the "Spike" Test. He knows that an amperage which will burn steel is ample for his needs.

The only tools needed to make the test are two pliers and two 20-penny spikes. Demonstrate this strength in your own garage. Hold one spike, with the pliers, to each terminal. Touch the free ends of the spikes. Mac-Lar's strength will do the rest.

### *This Raw Strength Guaranteed for Eighteen Months*

A written pledge to this effect protects each owner.

Mac-Lar keeps this punch because of three special advantages, combined only in this battery. (1) Extremely hard plates which insure long life, (2) 25% extra capacity for the same plate area, and a higher momentary discharge rate than any soft plate battery, (3) unusual recharging efficiency.

### *Mac-Lar Replacement Is Universal*

It fits 99% of the automobiles in use today.

It replaces more than 51 combinations of other batteries.

Universal terminals are supplied.

Four standard models, supplied in a 6-Volt and a 12-Volt shape, make this possible.

Anyone can install Mac-Lar. No tool other than a blow torch is required.

The six-volt battery retails for $25; the 12-volt battery for $36.

The Mac-Lar Agency appeals to dealers who do not want to invest in large service equipment, organization, etc. A letter or a wire will bring you a copy of the Agency Plan, a definite proposition setting forth the money-making possibilities of the Mac-Lar Master battery in your territory.

**Mac-Lar Battery Company Inc., Detroit, U. S. A.**

# Willard STORAGE BATTERY

Willard Threaded Rubber Insulation

## Two Years Ago and Today

*The story of a remarkable storage battery invention and what it is doing for Motorists*

In the fall of 1917 readers of national magazines read about a new Willard, a Still Better Willard, a Willard with an entirely new idea in battery construction—Threaded Rubber Insulation.

The Still Better Willard was not an experiment—for two years before the announcement a car builder put it on 35,000 cars. Many of those first Willard Batteries with Threaded Rubber Insulation are still in use after four years.

***What is the Secret of Threaded Rubber Success?***

Insulation had always been the big problem with any storage battery. Ordinary materials wore out before the battery plates did. Re-insulation was bound to come sooner or later, and when insulation began to break down the plates were injured.

But Willard, for the first time found a practical way to use *rubber*, the one ideal insulating material, by piercing each rubber insulator with 196,000 tiny threads to permit passage of the electrolyte.

You ought to be posted on batteries and battery insulation, so that when you need a new battery you'll be sure of the best your money can buy.

*Get the booklets "The Wick of the Willard" and "A Mark with a Meaning for You" from the nearest Willard Service Station.*

# ist Price of Storage Batteries for Cars From 1912 to 1919

## REVISED MONTHLY

**TO USE THIS TABLE.**—These prices are consumers prices of standard batteries, F.O.B. Home Office. Freight or express charges will have to be added. Weight of battery is given purpose. Look in Electrical Specifications Department for name and year and model of car: Find the serial number under the battery desired; look in this table for that serial and you will find the battery that will fit that car. Be sure and give the type number and order, or part number, in ordering. Do not pay any attention to serial number, as created by us to enable you to find the right battery quickly. Prices here given are taken from the latest price lists we have been able to obtain from manufacturers, and will mitted to manufacturers each month for revision. This compilation is for the benefit of the trade. We have used every care to give the latest, authentic information, but we guarantee the correctness of these prices and cannot be held liable for same.

### Coast to Coast Service of Prest-O-Lite Increased

Twenty-three additional Service Stations have been appointed by the Prest-O-Lite Company, Inc., of New York. The stations appointed are: J. G. Currington, Macon, Ga.; Monon Auto Supply Co., Monon, Ind.; W. C. Long, Peru, Ind.; Lee Bond Motor Company, Panora, Iowa; Dixon Tire & Battery Sta., Great Bend, Kans.; Cull Ebling Company, Hopkinsville, Ky.; General Automobile Co., New Orleans, La.; Gloucester Garage Co., Gloucester, Mass.; Ivens & Frank, Sturgis, Mich.; Electric Serv. & Tire Co., Faribault, Minn.; Crescent Battery Company, Greenwood, Miss.; Schafer's Battery & Tire Sta., Scott's Bluff, Neb.; Auto Storage Battery Co., W. New York, N. J.; Fostoria Battery Company, Fostoria, Ohio; Garrett & McElwee, Charlotte, N. C.; Cline & Paterson Storage Battery Service Sta., Delaware, Ohio; John L. Wetherill, Chester, Pa.; W. L. Paul & Sons, Beaufort, N. C.; Goodman Hughes Garage Co., Union, S. C.; Electric Storage Battery & Ignition Co., Spokane, Wash.; Burge Tire & Battery Co., Tupelo, Miss.; Cox & Spice, Charlotte, Mich.; Penn. Automobile Company, Lancaster, Pa.

### Stutz to Expand

Directors of the Stutz Motor Car Co. of America have decided to call a stockholders' meeting to vote on their recommendation that the capital be increased by 25,000 shares of no par value, and that these be sold; present stockholders having the first opportunity to purchase, at $100 a share.

H. F. Harris has been appointed general manager of the Bethlehem Motors Corp., Allentown, Pa.

Clarence M. Baldwin, who served on the Motor Transport Advisory Committee of the National War Work Council of the Y. M. C. A. during the war, left the committee when its work decreased and rejoined the Packard Motor Car Co. in Brooklyn.

R. B. Bowman, for a number of years western representative of the White Co., and more recently connected with the Denby Motor Truck Co., has been appointed central sales manager of the Standard Motor Truck Co., Detroit.

### Louisiana and Mississippi Dealers Organize

George D. Wray of Shreveport, La., was elected president of the new Louisiana-Mississippi Automotive Trade Association, organized recently at New Orleans. M. R. Adams of Meridian, Miss., was named first vice-president; Ginder Abbott of New Orleans, second vice-president; T. L. Huber of Lake Charles, third vice-president, and A. H. Borden of New Orleans, fourth vice-president. Jackson, Miss., was chosen as the next convention city.

### Tilden Made Director of Ajax Rubber

The Board of Directors of the Ajax Rubber Company, Inc., at a meeting held on August 19, 1919, elected Averill Tilden, a prominent Chicago banker, as a director, to succeed Mr. H. L. McClaren, resigned.

At the same meeting a resolution was passed to issue 36,000 shares of capital stock completing the total authorized capital of 200,000 shares and to offer this stock for subscription to stockholders at $70.00 per share.

This action was decided by the directors in order to provide $2,500,000 additional working capital for the purpose of increasing its manufacturing facilities to take care of the demand made upon it for Ajax casings and tubes.

The company contemplates the construction of a new factory, and while the location has not definitely been decided, it is probable that this factory will be built in the middle West.

The directors have also declared the usual quarterly dividend of One Dollar and Fifty Cents, payable September 15, 1919, to stockholders of record at the close of business, August 30, 1919.

*The B. F. Goodrich Rubber Co. Call attention to their More Mileage Adjustment as follows:*

# FABRIC TIRES - - 6,000 Miles
# SILVERTOWN CORDS 8,000 Miles

Fix these new Goodrich Adjustment figures firmly in your mind—6,000 miles for Fabrics and 8,000 miles for Silvertowns—instead of 3,500 and 5,000 respectively heretofore in force.

This new adjustment stands back of all Goodrich Tires, including tires already purchased and in the hands of user and dealer. Goodrich Tires in actual usage on road and pavement are today unfolding such matchless mileage, regularly in excess of adjustment basis that Goodrich knows it has the strongest, most durable tires that the rubber industry has produced.

The Goodrich Adjustment Mileage is increased because Goodrich knows the mileage in its tires, and you can supply your trade confident that with fair and square usage a Goodrich Fabric will render at least 6,000 miles and a Silvertown Cord at least 8,000.

We maintain Branches in over a hundred cities and towns. Get in touch with your nearest Goodrich Branch for further information.

THE B. F. GOODRICH RUBBER COMPANY
AKRON, OHIO

# GOODRICH TIRES

*Best in the Long Run*

# List-Prices of all Makes of Tires and Tubes

## REVISED MONTHLY

**EXPLANATION:—Under each size we have placed the list price of not only Casings, but also Tubes. The letters to the left of the line show the Type of Tread and Color of Tubes. P means Plain Tread; N. S. Non-Skid; G. T. Gray Tubes; B. T., Brown Tubes; R. T., Red Tubes; When price is given without letter or sign it means that the tire is manufactured in Clincher, Quick Detachable Clincher, and Straight Side or Dunlop types. When a C appears with the price it means that the tire is made in Clincher type only; when Q, in Quick Detachable only; when D, in Dunlop or Straight Side only; when †, in both Clincher and Quick Detachable; when *, in both Quick Detachable and Dunlop or Straight Side; when §, in both Clincher and Dunlop or Straight Side.**

**This compilation is for the benefit of the trade. We have used every care to give the latest authentic information, but we do not guarantee the absolute correctness of these prices and cannot be held liable for same. The Ferguson Publishing Co.**

# THE McGRAW PROPOSITION

*to*

# DISTRIBUTORS

***The values offered in the McGraw proposition are very definite. They are:***

1. **QUALITY OF TIRE**
2. **STABILITY OF MAKER**
3. **SERVICE FACILITIES**
4. **A COMPLETE LINE**
5. **PRICES AND PROFITS**

**Quality of Tire**

No effort or expense is spared to produce "the best tires that can be made from the best materials than can be bought." The McGraw inspection of raw materials is the most thorough in the industry. The entire plant is concentrated upon making quality goods.

**The Maker**

The Company is one of the "old established." Its tire experience goes back a full decade. Few makers have its financial strength. None have a better record of fair treatment. The plant is among the largest in the country. It has a steady capacity of 5000 tires per day.

**Service Facilities**

Branch facilities and service stations are established in trade centers and are being constantly extended to give distributors quick service.

**Complete Line**

McGraw Tires offer a well rounded opportunity for business expansion. They meet every need of cars and trucks. They include a fabric tire, a cord tire, a giant pneumatic, and solids in both Regular profile and the McGraw "HiTread." These are made in one quality only—**The Best.**

The McGraw HiTread deserves special mention. It combines all the advantages of 30% more rubber between rim and pavement than in the ordinary tire, with a sturdiness unexcelled by any type of tread.

**Prices and Profits**

McGraw distributors make money. They sell a product equal to the best, at a margin of profit which has always been attractive.

# THE McGRAW TIRE & RUBBER CO.

*Manufacturers of McGraw Cord and Fabric Tires, Regular and HiTread Truck Tires, Inner Tubes*

**CLEVELAND, OHIO**

*Factories:* EAST PALESTINE, OHIO

*Branches:*

**New York Chicago Cleveland Kansas City Atlanta Minneapolis Des Moines Dallas**
**Baltimore Boston Denver Memphis Detroit Indianapolis**

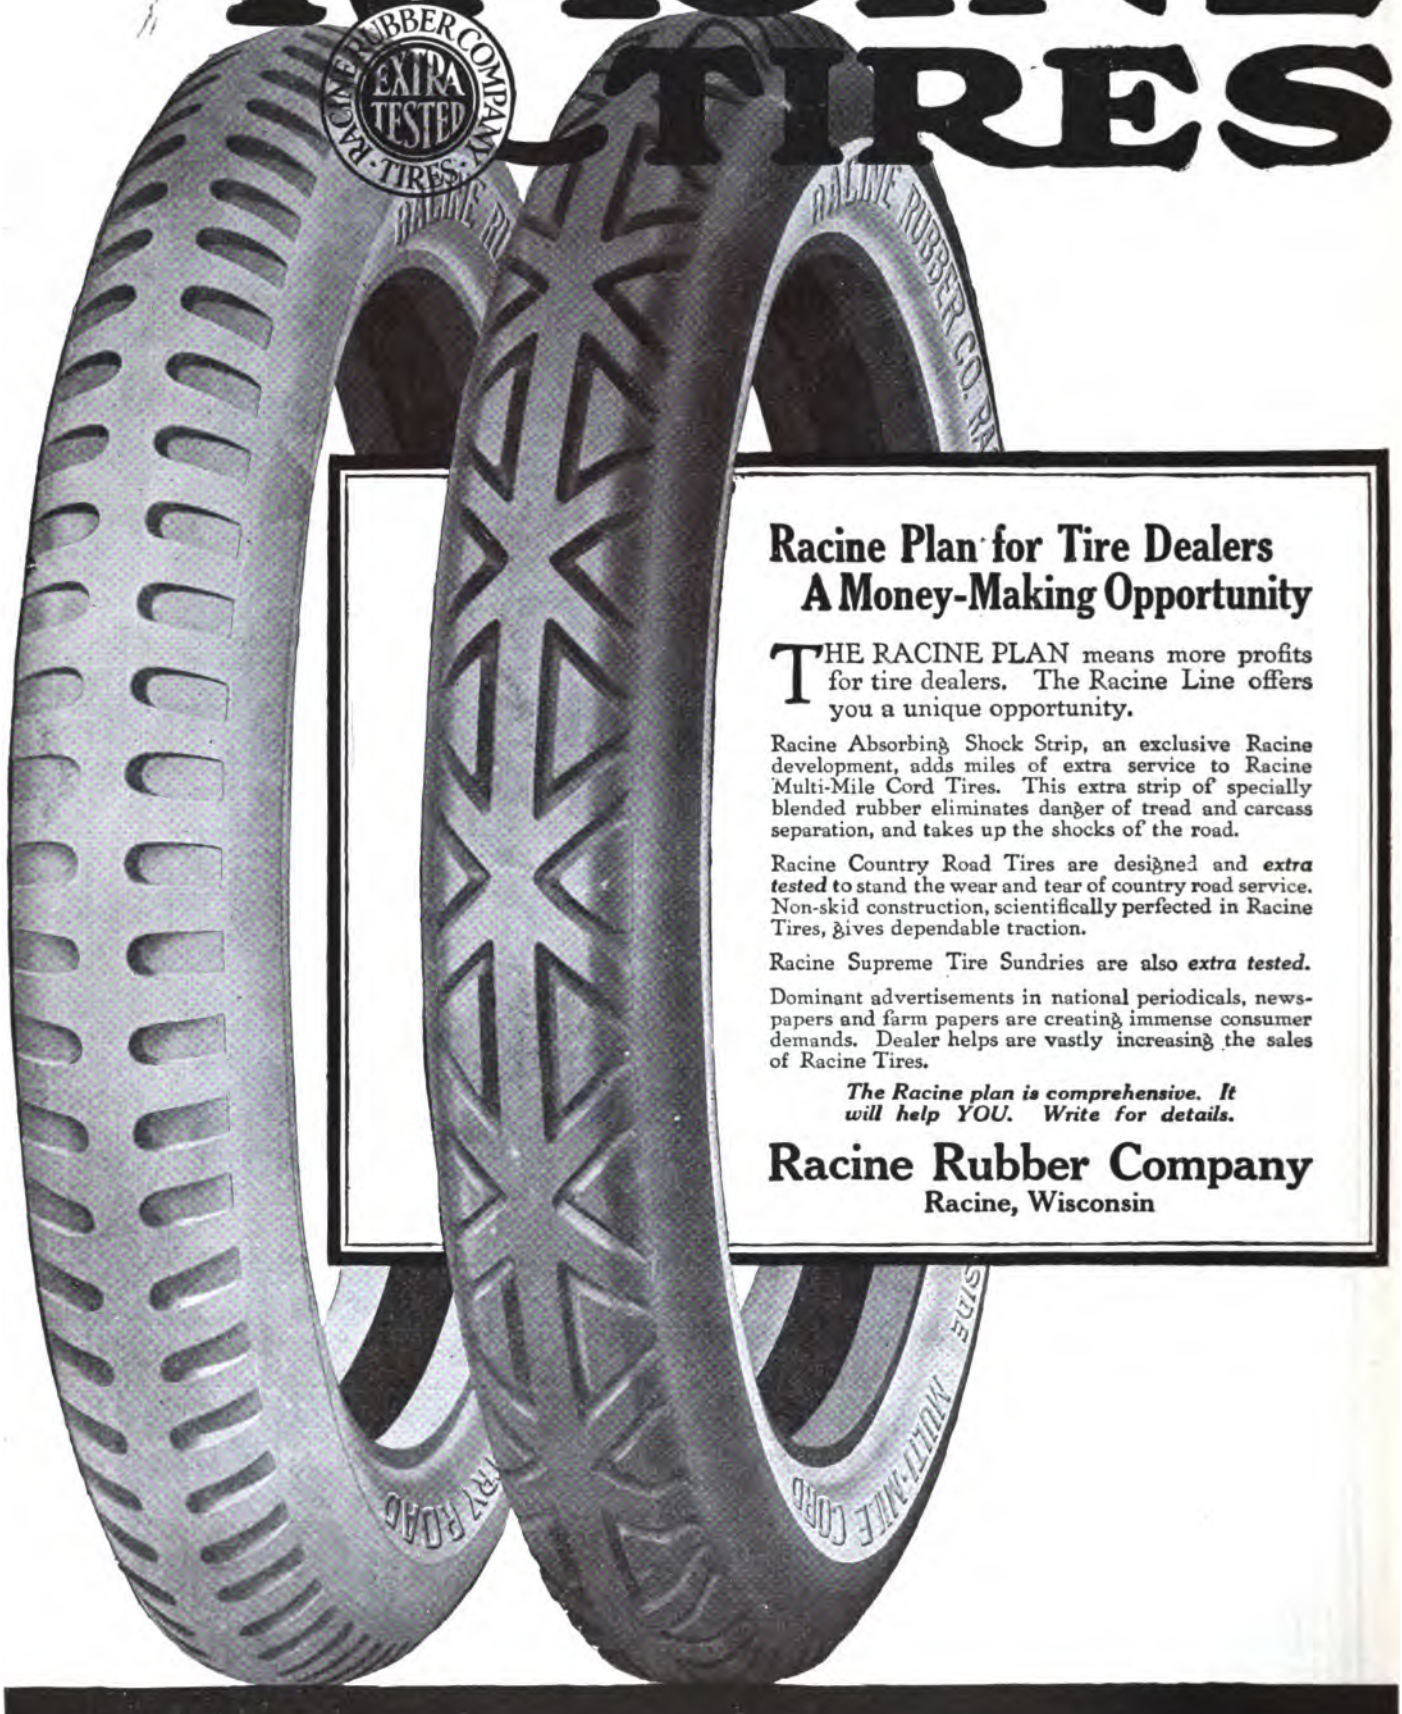
# RACINE TIRES



## Racine Plan for Tire Dealers A Money-Making Opportunity

THE RACINE PLAN means more profits for tire dealers. The Racine Line offers you a unique opportunity.

Racine Absorbing Shock Strip, an exclusive Racine development, adds miles of extra service to Racine Multi-Mile Cord Tires. This extra strip of specially blended rubber eliminates danger of tread and carcass separation, and takes up the shocks of the road.

Racine Country Road Tires are designed and ***extra tested*** to stand the wear and tear of country road service. Non-skid construction, scientifically perfected in Racine Tires, gives dependable traction.

Racine Supreme Tire Sundries are also ***extra tested.***

Dominant advertisements in national periodicals, newspapers and farm papers are creating immense consumer demands. Dealer helps are vastly increasing the sales of Racine Tires.

***The Racine plan is comprehensive. It will help YOU. Write for details.***

**Racine Rubber Company**
**Racine, Wisconsin**

# AJAX TIRES

**JUDGED by any standard, Ajax Tires more than measure up. Thousands of dealers agree that Ajax Tires have built successful money-making business for them. They have profited by the splendid reputation Ajax Tires enjoy—and their profits will continue, for that good reputation is founded on the fact that Ajax Tires yield *real* service.**

## AJAX DEALER'S FRANCHISE

**The Ajax Dealer's Franchise puts the tire dealer on a better business basis. It is an in-writing agreement by which zone protection and sales co-operation are assured. The Franchised dealer receives the benefit of the great Ajax National Advertising Campaign in The Saturday Evening Post, the Literary Digest, the Farm Journal and the leading state farm papers.**

**Remember—Ajax Tires are the tires careful buyers choose.** 97% of our entire output is sold, through Ajax dealers, to individual car owners. 97% Owner's Choice! It's a record to be proud of. And Ajax Tires are featured by Ajax Shoulders of Strength—those supple buttresses of rubber that brace both sides of the Ajax tread. They give more strength where strength is needed—more wear—longer life.

The Ajax opportunity is inviting. Write for complete details.

# FEDERAL
## Double Cable Base Tires

## Exclusive Sales Advantages

AS CAR owners expect more from tires, Federal dealers sell more tires. The public is rapidly learning that the Federal exclusive Double-Cable-Base means more mileage and greater economy.

Dealers who want to make money out of this fact should write us.

---

THE FEDERAL RUBBER CO. OF ILLINOIS. Factories, Cudahy, Wis.

*Manufacturers of Federal Automobile Tires, Tubes and Sundries, Motorcycle, Bicycle and Carriage Tires, Rubber Heels, Fibre Soles, Horse Shoe Pads, Rubber Matting and Mechanical Rubber Goods.*

# DREADNAUGHT TIRES

STAMINA—That is the word—stamina, the inbuilt capacity to endure. It is this enviable quality which empowers DREADNAUGHT TIRES to yield mileage in excess of the popular guarantee.

## 6000 MILES GUARANTEED

*Manufactured by*

**THE DREADNAUGHT TIRE & RUBBER Co**
BALTIMORE, MARYLAND

DEALERS who consider that they are entitled to share in the benefits of selling DREADNAUGHT TIRES are invited to wire or write for terms.

CHARLES F. U. KELLY, Inc., *Sales Department,* 1834 B'way, New York

# BILTWELL TIRES

"MASTER OF THE ROAD"

## LONG SERVICE
of
## BILTWELL TIRES
**Lies in**

— the rich quality of materials used.

— the expert workmanship incorporated in their manufacture.

— the fact that they are extra well reinforced where stresses are applied.

— and the fact that the last word in rubber-making machinery is used in their construction.

*Some attractive territory is still available for the man who wants the best.*

**THE BILTWELL TIRE & RUBBER CO.**

**MADE AT AKRON**

# GLOBE CORDS

## GUARANTEED 8000 MILES

**FABRIC TIRES 6000 MILES**

# Economy through Quality

Hand-made Globe Tires—Cord or Fabric—cost about 10% more to make than ordinary tires, but they give the user about 50% more miles. Figured on a mileage basis, Globe Tires are the most economical of all.

*To responsible dealers only: If Globe Tires are not represented in your city or town, write us promptly for our exclusive proposition.*

## GLOBE RUBBER TIRE MANUFACTURING CO.

*Executive Offices:* 1851 Broadway, New York
*Factories:* Trenton, N. J.

NEW YORK BRANCH: 1851 Broadway
CHICAGO BRANCH: 2029 S. Michigan Ave.
PHILADELPHIA BRANCH: 804 N. Broad St.
BOSTON BRANCH: 679 Beacon St.

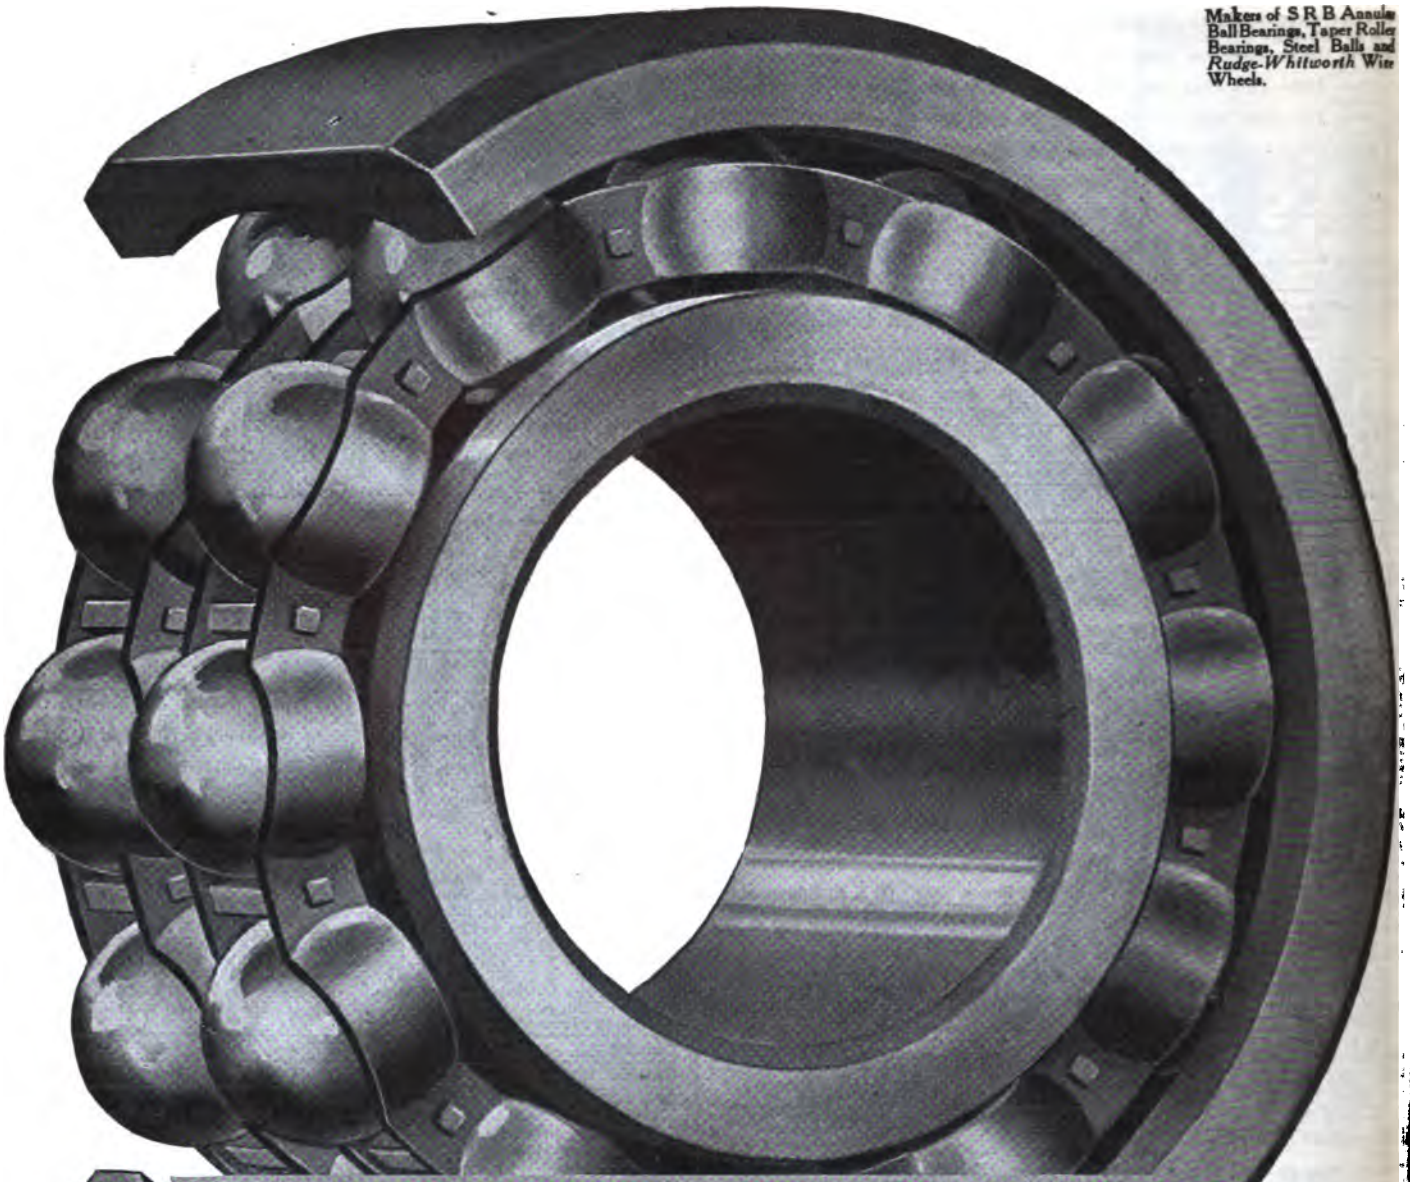
Makers of S R B Annular Ball Bearings, Taper Roller Bearings, Steel Balls and *Rudge-Whitworth* Wire Wheels.



SRB

## *Standard Bearings will withstand greater overloading*

The design allows for more balls than any other bearing, making possible a smoother and more even distribution of the load.

This standard principle of load distribution, backed by exacting selection of materials, and by scrupulous accuracy of workmanship, has produced a bearing of much greater strength and longer life.

**STANDARD ROLLER BEARING CO.**
**PHILADELPHIA, U. S. A.**

# GURNEY

## The Radio-Thrust Bearing

Anyone familiar with the most elementary principles of mechanics understands how the combination of two forces exerted in different directions is a simple and single force acting in one direction. The idea of inclining the load line of the ball into the general direction of the line of force thru which the actual load is received is the elementary idea that is involved. It is so simple and so obvious that it seems strange and almost unaccountable that its validity and the propriety of its application should ever have been questioned.

But this idea is today accepted with a favor as general as was the condemnation with which it was received ten years ago. Nearly every manufacturer of ball bearings is today making some sort of a bearing of this type. The original bearing of this type, the Gurney Radio-Thrust Bearing, has always differed from all other angular contact or combination bearings in that the idea is carried out more completely.

P. W. Gurney Jr.

(Model 210)—(A) Tim, 5550-5520; (B) Tim, 5351-5320; (G & H) Hy, 26480; (J) 310; (K) Hy, 26669; (AA) 211; (BB) Hy, 27988; (DD) 309; (EE) 308.
1919 (3½-5 Ton)—(F) Hy, 47893: (G & H) Hy, 26480: (K) Hy, 26669.

**DENMO—1917-18 (10 1¼ Ton)**—(D) Bower, 309N: (E) Bower, 306N (Jackshaft), 306N
1918 (12 ¼ Ton)—(D) Bower, 308N: (E) Bower, 306AL (Jackshaft), 306AL.

**DETROIT (Electric)—1913 (Mods. 35, 36, 37, 39, 40 & 42)**—(A) Tim, 342-3320; (B) Tim, 235-2320; (D & E) 210.
1914 (Mods. 46, 47, 48)—(A) Tim, 342-3320; (B) Tim, 235-2320; (D & E) Tim, 365-; 363; (I) 709U; (L) 209; (M) 307.

**DETROITER—1917 (Mod. 6-45)**—Tim. Brgs.; (A) 257-2520; )B) 235-2320; (D) 415T-412A; (A) Ann, 209; (G) 288-284; (H) 355-3520; (J) 334-3320; Ann, 207; (K) 258-2520; Ann, 407; (O) Ann, 205; (BB) Ann, 307.

**DIAMOND ARROW—1909-10**—Tim. Brgs.; (A) 3357-3320; (B) 3151-3120; (D & E) 355-3520; (G & H) 375-3720; (J) 256-2520; (K) 337-3320.

**DIAMOND T—1913 (Pleas.)**—Tim. Brgs.; (A) 415-412; (B) 316-312; (D & E) 365-363; (G & H) 375-3720; (J) 256-2520; (K) 415-412; (AA) 337-3320; (BB) 335-3320 (DD & EE) 316-312.
1914 (J 1½ Ton)—Tim Brgs.; (A) 3750-3720; (B) 3360-3320; (D & E) 5553-5520; (G & H) 559-552; (J & K) 539-532; (AA & BB) 337-3320; (DD & EE) 335-3320.
1915 (J 1½ Ton)—Tim. Brgs.: (A) 3750-3720; (B) 3360-3320; (D) 4553-4520; (E)

**DILE—1915 (Mod. A)**—(F) 306; (G & H) 207; (J) 0205; (K) 0206; (AA) 206; (BB) 205; (DD & EE) 205.

**DIXIE FLYER—1917** (Flyer)—(D & E) Bower, 209AL: (G) Bower, 209A.

**DIXIE—1916-17-18**—(G & H) Hy, 26216.

**DISBROW—1917** (Louis Disbrow)—(DD & EE) Hy, 17799.

**DOANE (Truck)—1917 (2½-Ton)**—Tim Brgs.; (A) 4550-4520; (B) 4361-4320; (D) 5550-5520; (E) 5351-5320; (G & H) 3955-3920; (J) 435-4320; (K) 336-3320; (AA) 337-3320; (BB, DD & EE) 335-3320.
1917 (6 Ton)—Tim. Brgs.; (A) 6356-6321; (B) 5355-5320; (D) 6550-6521; (E) 6354-6321; (G & H) 5756-5720; (J & K) 5356-5320; (AA & BB) 440-4320; (DD & EE) 415-412.

**DODGE (All Years)**—(A) Tim, 256-2530; (B) Tim, 1751-1730; (D & E) Tim, 288-284; (G & H) Tim, 365-363; (J) Tim, 255-2530; (K) Tim, 3191-3120; (O) 304; (Q) 304; (AA) 207; (BB) 308.

**DORRIS—1912 (Mod. 35)**—Tim. Brgs.; (A) 337-3 20; (B) 315-312; (D & E) 365363 (G & H) 375-3720; (J) 256-2520; (K) 415-412; AA & BB) 335-3320; (DD & EE) 316-312.
1912 (1-Ton Del.)—Tim. Brgs.; (A) 337-3320; (B) 315-312; (D & E) 365-363; (G) 375-3720; (H) 456-4520; (J) 336-3320; (K) 435-4320; (AA & BB) 335-3320; (DD & EE) 316-312.
1913-14 (Mods. 35, 1-14)—Tim. Brgs.; (A) 337-3320; (B) 315-312; (D & E) 365-363; (G) 375-3720; (H) 456-4520; (J) 317-312; (K) 440-4320; (AA & BB) 335-3320; (DD & EE) 316-312.
1913 (Lt. Del.)—Tim. Brgs.; (A) 337-3320; (B) 315-312; (D & E) 375-3720; (G) 456-4520; (H) 559-552; (J) 439-4320; (K) 539-532; (AA & BB) 335-3320; (DD & EE) 316-312.
1913 (1½ Ton)—Tim. Brgs.; (A) 3750-3720; (B) 3360-3320; (C) 341-3320; (D) 5563-5520; (E) 4365-4320; (G & H) 375-3720; (J) 256-2520; (K) 415-412; (AA & BB) 335-3320; (DD & EE) 316-312.
1914 (1-Ton Del.)—Tim. Brgs.; (A) 415-412; (B) 316-312; (D & E) 375-3720; (G) 456-454; (H) 559-552; (J) 439-4320; (K) 539-532; (AA & BB) 335-3320; (DD & EE) 316-312.
1914 (2-Ton)—Tim. Brgs.; (A) 4550-4520; (B) 4361-4320; (C) 443-4320; (D) 5550-5520; (E) 5355-5320; (G) 375-3720; (H) 395-3920; (AA & BB) 335-3320; (DD & EE) 316-312.
1915 (1-Ton Del.)—Tim. Brgs.; (A) 337-3320; (B) 315-312; (D & E) 375-3720; (G) 456-454; (H) 559-552; (J) 439-4230; (K) 539-532; (AA & BB) 335-3320; (DD & EE) 316-312.
1915 (1-A-4)—Tim. Brgs.; (A) 337-3320; (B) 315-312; (D & E) 365-363; (G) 375-3720; (H) 456-4520; (J) 317-312; (K) 440-4320; (AA & BB) 335-3320; (DD & EE) 316-312.
1915 (2-Ton)—Tim. Brgs.; (A) 4550-4520; (B) 4361-4320; (C) 443B-4320; (D) 5550-5520; (E) 5355-5320; (G & H)375-3720; (J) 256-2520; (K) 415-412; (AA & BB) 335-3320; (DD & EE) 316-312.
1916 (1-B-6) 1917 (1-B-6-¼ Ton)—Tim. Brgs.; (A) 415-412; (B) 316-312; (D & E) 365-363; (G) 375-3720; (H) 456-4520; (J) 317-312; (K) 440-4320; (Q) Ann, 1205; (AA) 337-3320; (BB) 335-3320; (DD & EE) 316-312. (Main Shaft Front on 1916 B-6) uses Tim, 335-3320.
1916-17 (1-B-W)—Tim. Brgs.; (A) 4558-4520; (B) 3360-3320; (C) 341B-3320; (D & E) 5553-5520; (G & H) 559C-552; (J & K) 539C-532; (Q) Ann, 1205; (AA & BB) 335-3320; (DD & EE) 316-312. 1917 Model uses Tim, 337-3320 on Main Shaft Front.

**DORT—1915-16-17-18-19 (5-5A, 9, 11)**—(D & E) Hy, 16395; (G & H) Hy, 162270 (J) Tim, 319-312; (K) Tim, 348-332; (AA) 207; (BB) 305.

**DREDNOT—1914 (Mod. A-13)**—Tim. Brgs.; (A) 5550-5520; (B) 5351-5320; (C) 5354-5320; (D) 6356-6321; (E) 5355-5320.
1915 (Mod. 9)—Tim. Brgs.; (A) 4550-4520; (B) 4361-4320; (C) 443B-4320; (D & E) 5553-5520; (G & H) 559C-552; (J & K) 539C-532.
1915 (Mod. G)—Tim. Brgs.; (A) 4558-4520; (B) 4360-4320; (C) 341B-3320; (D & E) 5553-5520; (G & H) 559C-552; (J & K) 539C-532.

**DREXEL—1917 (Mod. R.)**—(D & E) Bower, 208A.

**DRIGGS SEABURY—1912-13 (4-5 Ton)**—(D) Tim, 6451-6420; (E) Tim, 6354-6321.
1912-13-14 (2 Ton)—Tim. Brgs.; (A) 4550-4520; (B) 4364-4320; (D) 5554-5520; (E) 5355-5320.
1913-14 (3 Ton)—Tim. Brgs.; (A) 4550-4520; (B) 4364-4320; (D) 6358-6321; (E) 5565-5520.
1912-13 (7-Ton)—Tim. Brgs.; (A) 6452-6420; (B) 5355-5320; (D) 6552-6521; (E) 6350-6321.

**DUPLEX—1916 (Mod. C-B)**—(AA & BB) Tim, 357-353; (DD & EE) 339-333.
(2 Ton)—(A & D) Bower, 3762T: (B & E) Bower, 3362T: (G & H) Bower, 458T: (J) Bower, 4359T: (K) Bower, 335T.
(3-Ton)—(A) 311N; (B) 310N; (J) Bower, 355T; (K) Bower, 4359T.
1916 (Mod. D)—(A & D) Bower, 311N; (B & E) 310N; (G & H) Bower, 456T; (J) Bower, 335T; () Bower 4359T; (O) 205; Jack Shaft Hy, 19200.
1917 (Mod. E)—(A & D) Bower, 311N; (B & E) Bower, 310N; (G & H) Rower, 456T; (J) Bower, 335T; (K) Bower, 4359T; (O) ND. 205 Jack Shaft Hy, 19200.
1917 (Mod. EL)—(A & D) Bower, 311N; (B & E) Bower, 310N; (G & H) Bower. 456T; (J) Bower, 335T; (K) Bower, 4359T; Intermediate Rear Drive Shaft SK.F, 1309; (O) 205; Jack Shaft Hy, 19200.
1918-19 (Mod. E & EL)—(A & D) Bower, 311N; (B & E) Bower, 310N; Bower 456T; (J) Tim, 335-3320; (K) Tim, 4368-4320; (O) 205, Brgs. 2 Bowers 4355T, Jack Shaft Hy. 19200.
1918 (D 3½ Ton)—(A & D) Bower, 311N: (B & E) Bower, 310N: (G & H) Bo (J) Bower, 4359T: (K) Bower, 335T: Jack Shaft, Bower, 310NDT

**DUROCAR—1911 (Mod. D-30)**—Tim. Brgs.; (A) 3357-3320; (B) 3151-3120; & H) 375-3720; (J) 336-3320; (K) 435-4320.

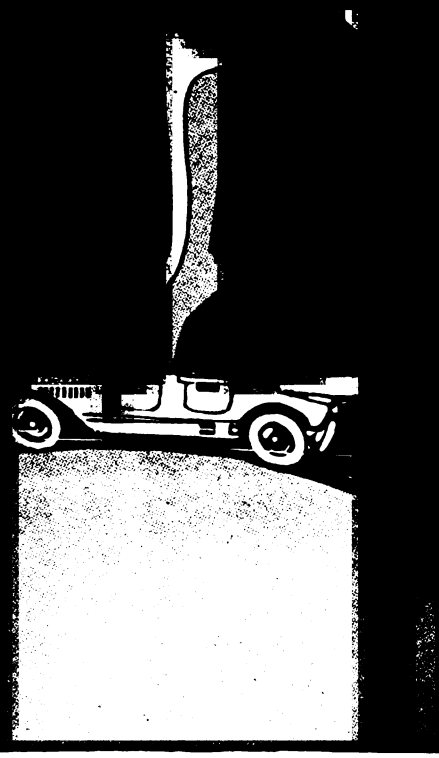
# ZENITH



**In the air, or on the highway**—the ZENITH maintains the unparalleled record of consistent service.

Ask any man who has been, or is, in the air service of the United States and he will tell you that with his ZENITH equipped plane the airman never has to worry about his carburetion.

Ask any owner of a ZENITH equipped truck or passenger car and he will tell you that the ZENITH gives a remarkable freedom from carburetor trouble, requiring no adjustment or attention; that it economizes fuel; that it gives the full power and speed essential to owner satisfaction.

Ask a ZENITH dealer for a demontration.

"NORMA"
PRECISION
BALL BEARINGS
(PATENTED)

Nothing will more completely stop a car, truck, tractor or power boat — than the failure of a magneto bearing. Nothing will more certainly limit its service, than the failure of a bearing in its lighting generator. Is not serviceability — then — a vital essential in these small bearings?

Manufacturers of magnetos and lighting generators who place serviceability before price, standardize on "NORMA" Bearings because their experience has proved that "NORMA" serviceability fortifies that of their own design.

**Be SURE. See that Your Electrical Apparatus is "NORMA" Equipped.**

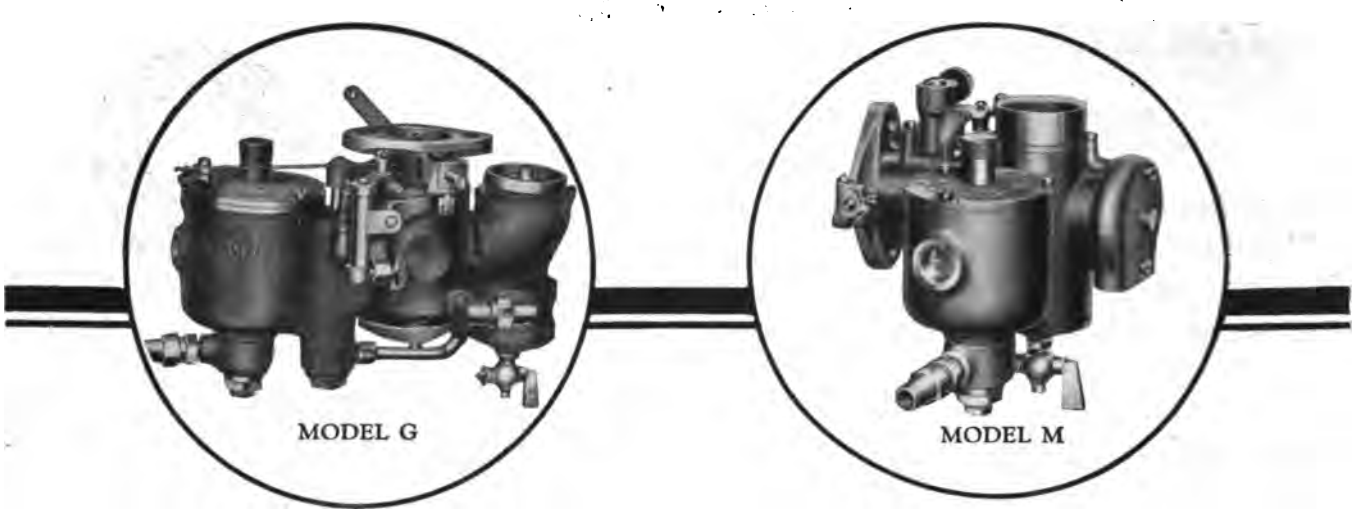
# The Response of a Motor Depends on Its Carburetor



Regardless of the good features designed in your motor, its results depend on the carburetor.

With a Rayfield carburetor your motor will throttle down until it barely turns. It will pick up quickly to maximum speed. This wonderful flexibility enables the motor to take the car over the biggest hill from five to ten miles an hour faster than any other carburetor. No changes in adjustments are necessary for this performance.

Repeated tests by leading automotive engineers have proved Rayfield responsiveness time after time. This is the reason Rayfields are now standard equipment on so many of America's fine cars.

Such a good carburetor naturally costs more. Engineers know, however, that results in car performance with added owner satisfaction more than justify the expenditure.

# How it Helps the Dealer to Increase Tire Mileage

## The Reputation of a Tire Depends on the Service it Renders and the Success of the Dealer Depends on the Reputation of the Tire He Sells

THAT tires are the most expensive item in upkeep of an automobile is a fact well known to both the dealer and owner. Every dealer knows that a good tire should run something like 15,000 miles. yet it is probable that the average tire hardly gives one-third of this service. This is largely due to lack of proper care. The reputation of any make of tire largely depends upon the service it will give, and the success of the tire dealer depends on reputation of the tire he sells. For this reason it is advantageous for every dealer to impart to owners as much information as possible on the care of tires.

Most tires are not kept properly inflated. This does not mean that they never are inflated to the proper pressure. On the contrary, when a tire is pumped up most owners now see to it that the proper pressure is reached. But, unfortunately, after going through such an operation they usually forget all about the tire until it becomes noticeably soft again. This means that a considerable proportion of the time the tire is being operated while it is too soft. The necessity of frequently testing tires to see if they carry the proper pressure, or else of equipping the tire with a device for warning the operator when the pressure has fallen below a certain point, should be impressed upon every owner.

The necessity of repairing small cuts as soon as they appear should also be brought to the attention of the owner. Small cuts admit dirt and water which eat into the fabric and cause sand pockets and blowouts. Tire fabric is usually made of Sea Island cotton. This cotton is very strong and has been found to be extremely satisfactory for this purpose, but water will rot it in time, and once the fabric is destroyed a blowout is sure to occur. So long as the rubber tread remains intact the water will never reach this fabric, but once a cut does occur it must receive immediate attention. There are a number of rubber compounds of a dough-like consistency which can be used to stop up small cuts. The dealer should bring this fact to the attention of the owner and tell him how in a few minutes' time a great deal of tire trouble can be done away with. The method of repairing such cuts is usually to spread the cut open with any convenient tool such as a screwdriver, apply a little cement and after it has dried to a sticky consistency force in the dough-like rubber compound until the cut is filled. Next time the car is operated the heat generated will assist in sort of vulcanizing the repair and making a sound job.

In the case of larger cuts, of course, the vulcanizer must be resorted to. Many owners do not realize the importance of carrying a small portable vulcanizer on their car so that fairly large cuts in the tread can be repaired as soon as they appear. The dealer should get after every owner who does not possess such an outfit and sell him one. It is a simple matter for the automobilist to learn to use these small vulcanizers. All he has to do is clean the cut with a little gasoline, fill it with scraps of raw rubber, attach the vulcanizer and subject the patch to a heat of about 265 degrees Fahr. for about 15 minutes. In the case of a large cut, of course, it is necessary to bring the tire to a repair station equipped with large vulcanizers and skilled workmen.

With regard to tubes, almost every motorist is familiar with the ordinary patch which is applied with cement, also with the type of patch which already has cement on it and merely has to be dipped in gasoline before applying. In most cases these patches will last a long time if the tube is well cleaned and the surface roughened with a piece of sand paper before applying, but if a really permanent job is wanted the puncture should be vulcanized. There are many small vulcanizers especially designed for repairing tubes on the market and the dealer should acquaint the owner with this fact.

One type of vulcanizer which is particularly convenient for repairing tubes comes with special patches provided with an inflammable chemical on the back. After the patch is clamped to the tube the chemical is lighted and burns the correct time to vulcanize the patch to the tube.

# Piez Surveys the Industrial Situati

## An Address by Charles Piez, President of the Link Belt Co., Delivere at "Our Country First" Conference Held in Chicago Under Illinois Manufacturers Association

DURING the most prosperous period in our history, with the highest wages ever paid, with abundant opportunities for employment, with a universal public acknowledgment of labor's rights to a fuller and better life, and with an administration and a congress most responsive to labor's demands, we are confronted with a spirit of unrest which threatens the foundation of our social and political, as well as our industrial, structure.

The Great War brought with it such an enormous demand for labor that privileges and concessions that had been the subject of controversy for a generation, were granted without hesitation, simply to insure that continuity of industrial processes necessary to victory. For it was victory we were after, even though we had to sacrifice industrial efficiency—yes, the very industrial system itself, to win it.

Our problem was output regardless of cost, and we got it at the sacrifice of those safeguards and restrictions which competition usually imposes on the management of business. Is it strange that with the unlimited opportunities opened up to labor by the war, it should have become conscious of its political power and its economic strength? Is it strange that with the unlimited opportunities opened up to labor by the war, it should have become conscious of its political power and its economic strength? Is it strange that labor should decline to surrender any advantage gained by the war, but should press for the control of industry itself?

If the Plumb Plan is any gauge, then nationalizing the railroads, nationalizing the mines and the industries, does not mean Government ownership and operation in the ordinary acceptance of the word, but purchase out of public funds, with an absolute surrender on the part of the public of every form of control and direction to the employes, without power of revocation. I am referring to the Plumb Plan as a symptom rather than as a possibility, but it shows the character of the malady. And when organized employes of the railroads tie up traffic in four States, and subject the public to loss and discomfort merely for the purpose of influencing a decision in a trolley strike with which the Railroad Administration was in nowise affiliated, it indicates that popular government, if its representatives lack courage, can be absolutely under the domination of an organized, selfish and unscrupulous minority.

I commend the President of the United States, and the Railroad Administration, highly for the sound and courageous attitude taken in the Southwestern railroad strike. But I regret that his position was coupled with a promise to raise wages if the administration's efforts to reduce the cost of living proved futile. If the high cost of living is due to profiteering by merchants, manufacturers, employes, farmers or workers, then the Government ought to be able to reduce it. But if, as is more likely, investigation proves that the high cost of living is due to economic causes beyond the control of this nation, to world-wide reduction of ou a point far below present world demands, will be unwise, to say the least, to meet th tion by a general wage increase, unless that i is justified by a corresponding increase in eff output. For if our premise is correct, then t way out of the difficulty is to produce more a sume less. Nothing else will do.

The railway organizations have evidently doned the fairness and consideration of actior characterized them for years, and have forgott the control of great power carries with it corr ing responsibilities. The railway employes, r ter what their number, or their power, are perior to the public and its government, and along the lines suggested by the Illinois M turers' Association, and covered in our reso should be incorporated in pending railway tion to protect the public from the results of abuse of the great powers now resting in the of these organizations.

I am opposed to government by coercion, by and intimidation, because it is subversive of th lar will. I am opposed to the general strik unAmerican instrument of labor oppression, l it attempts to win its point, not by its merit, putting an entire community to such inconve trouble and loss that the public will insist on a ment rather than submit to further pressure.

Certainly such procedure has no place in ocracy, and it will have no place if Mayor H methods at Seattle be used as a precedent.

New terms have crept into our language tha with them a threat and a menace. Bolshevi dictatorship of the proletariat, the direct ac the Soviet, the solidarity of labor. They foreign origin and receive but scant hospitalit American born workmen. I have no fear th shevism will take root here, but I do feel th the American born workman subordinates too readily to the domination of his union l and that he is working on the theory that loy the union, and not loyalty to the public inte his first duty.

The union is supposed to be a form of dem controlled by the will of the majority; but th few cases, indeed, in which the free and unres views of the majority prevail. Meetings are to the same plays and tricks as political me and rumors of packed meetings, coercion, in tion, and other misuses of power, are by no rare.

The meeting hall of the Boilermakers' Ur Seattle is reported to hold nine hundred men membership of this Union is said to be fifteer sand. The vote to strike was taken last Jan a late hour by men present in the hall, so majority of approximately six percent of the bership, determined the policy and action of th ninety-four percent. And such is the loyalty,

Digitized by Google

it, of the members, that the ninety-four percent :pted the vote as binding, although private polls several large groups showed a large majority inst the strike. I believe there is no doubt that Seattle strike was decided upon and enforced by inority; that it was not the result of a free regis- ion of the will of the majority, ion. Members of Unions will learn sooner or r that it is through such action as that, that idence in their responsibility to carry out an :ement is lost, and that unionization of industrial :esses is looked upon as a step toward business oralization and ruin, by many employers.

is to the interest of the sane rank and file of unions to see to it that pledges and agreements :ept in both spirit and letter; that methods and tices like systematic reduction of output be dis- ed, so that public sympathy, which heretofore been unstintingly given to the aims and aspira- s of labor organizations, be not forfeited through ig and harmful methods.

ie unsettled conditions incident to the war, and general desire on the part of labor to get a large e of the profits of industry, have resulted in : marked reductions of output. I have it on authority, in two of the large cities of the coun- and we may assume this condition to be fairly ral, that while formerly from 1,500 to 2,500 com- brick laid in the wall per day, depending upon :ind of work engaged in, represented a fair day's : for a bricklayer, today it is impossible to obtain : than from 500 to 1,000 brick laid under the : conditions. While this reduction has taken : over a number of years, the heaviest shrinkage itput has occurred during the past year and a

And this reduction in efficiency is by no means ned to bricklayers, but is characteristic of some ie other building trades as well.

ie complete unionization of the clothing industry :ing accompanied by an abolition of the piece system and by a reduction in the daily output worker as well. Is it not timely to suggest a nal investigation to determine to what extent duction of average output has tended to raise price of certain commodities?

ith such evidence as this before us, can we doubt moment that the insistence on the continuance ie "open shop" principle in industry is made in ublic interest?

eater production, greater thrift, and frugality he most effective factors in reducing prices, but :ased production cannot be achieved unless :s be based on output instead of on hours :ed.

ie last two years have witnessed a wide exten- of the 8-hour day, and if that has carried with corresponding reduction in output, and a pro- onate increase in pay per hour, a very consider- increase in cost of commodities is accounted for. recognize, of course, that the objection of cer- unions to piece work is well justified because ist abuses of this method of wage payment, but : can be no question of the fairness and sound- of paying a man for the amount of work turned providing the unit or piece rate of compensation rly and equitably determined, and its perman- guaranteed. To meet the present urgent de- for increased production we can hardly leave the individual operator to determine what out- fair day's work shall represent; for we will sink inevitably to the capacity of the least experienced and least ambitious, for our standard.

Wages based on output, under safeguards that will correct and prevent abuses, should be accepted by organized labor in industries where this practice has been discarded.

There is no doubt that a considerable part of industrial unrest, and its companion, industrial shirking, grew out of the exaggerated notions of profits which the intense industrial activity during the war was supposed to yield. No account was, of course, taken of the outlay for buildings and special equipment which had to be paid for out of profits, nor of the heavy inroads which federal taxes made on the gross return. During the Seattle strike, agitators stated in open meetings that the largest ship yard in Seattle was earning $60 per man per day, out of which the man received $6.00. The statement was, I was told, widely accepted as representing the exact situation, and yet the facts were these: The yard employed 15,000 men, who, according to the statement, earned for the yard the small sum of $810,000 profit per day, or $250,000,000.00 per year. This represented over four times the total annual output of the yard, and more than two and a half times the value of the contracts held by it. Publicity of the facts is not a bad remedy to apply in such a case.

Another and not an inconsiderable part of present day unrest is due to the nonfulfillment of expectations growing out of the winning of the war. It was predicted that Victory would bring in a new order of things, new social conditions, new relations between employers and employes in industry. Statements of this character were largely idealistic, and referred to an extension of rights and privileges to the downtrodden races of Europe, rather than to any promise of an increase in material advantages to our own citizens. But many people built high hopes on this rhetorical groundwork, and there is naturally keen disappointment that the armistice was not followed by an immediate improvement in the status and income of the individual. This was to be expected. To change from the excitement, the intense interest and the stimulus of war, to the commonplace and comparatively humdrum conditions of peace, required a mental readjustment of our people that could not be accomplished without manifestations of discontent and distrust. It will take time to complete the change, but in the meantime we have a much more critical industrial body to placate and satisfy, and we must look for a remedy to allay unrest and convince the workers they are receiving their fair share of the profits of industry.

While this conference has not had the time to devote any considerable thought to the industrial problem, it may not be out of place to put before it certain reflections on some of the remedies which are today receiving either consideration or the test of applications.

Let us admit in the first place that the industrial problem is a complicated one that will yield to no particular formula, and that where there are so many suggested remedies there is probably no single and specific remedy.

The democratization of industry is glibly spoken of as one of the remedies, and the interpretation placed on this phrase ranges from the establishment of shop committees with authority in matters affecting the employment relations, to the complete control of the industry by the employees. I am not at all impressed with the idea that by democratizing

# A Man's Reason

***Men, too, Like the Columbia Six***

Ask any man who drives a Columbia Six and he will tell you that from a sound, practical, business-like standpoint the Columbia Six appeals to him because it is thoroughly reliable—built by a substantial organization and is wonderfully economical both in up-keep and depreciation.

Columbia dealers throughout the country tell us that they looked long for a car that would appeal on a business basis to a man as the Columbia Six does.

A Columbia sales agreement is a positive assurance of a growing business for years to come.

# Keeping Him "Sold"

Westinghouse values highly the opinion of the man who *rides* and the man who *reads*.

So not content with putting the highest quality into starting, lighting and ignition equipment, and furnishing service to the user, Westinghouse does still more.

In addition to its many selling forces that are founded on engineering ability, manufacturing experience and service, Westinghouse has another that is ever at work extending good will for the name "Westinghouse"—the force of advertising.

Westinghouse advertising is put every month before millions of motor car and motor truck owners or prospective buyers —which is one of the reasons why Westinghouse Equipment is so frequently "sold" before the car is sold.

*For your own protection and to keep valid the Westinghouse guarantee, use only Westinghouse repair parts, which can be obtained from authorized service stations in all parts of the country.*

**WESTINGHOUSE ELECTRIC & MANUFACTURING CO.**

NOTE THE WOOD WHEELS EVERYWHERE

# Where WOOD Wheels *only* could be used

Not only must field artillery wheels have the excessive strength to stand severe shock—

They must be *resilient*. They must take up all road vibrations.

The modern field howitzer has no spring suspension, no rubber tires. Its delicate mechanism while traveling is protected solely by the shock-absorbing qualities of its WOOD Wheels.

Wood, with its tough, fibrous texture, is the *only* material having all of the necessary qualifications for field artillery wheels.

WOOD Wheels are the logical wheels for trucks.

AUTOMOTIVE WOOD WHEEL MANUFACTURERS' ASSOCIATION
105 West Monroe Street Chicago, Ill.

**WOOD WHEELS for MOTOR VEHICLES**

# MANUFACTURERS' NOTES

A $500,000 factory will be built at Mount Clemens, Mich., by Henry Ford for the manufacture of automobile and tractor parts. It will get its power from the Clinton River. The Ford engineers are now at work locating a suitable site.

The Grinding Process Tool Co., Detroit, is the new name for the Dertoit Reamer Salvage Co. The company will re-manufacture machine tools of all characters. The capital stock has been increased.

The Packard Motor Car Co., Detroit, will erect two buildings to house its service department and its local salesroom. The service building will be L-shaped with a street frontage of 400 ft.

The General Motors Corp. will build a $100,000 warehouse and add additional office space at the General Motors Truck Co. plant at Pontiac. The warehouse is to be 80 by 300 ft. Office rooms will be secured by adding a second story to the present structure. This will provide 8000 sq. ft. more floor space and it will be used by the sales and engineering departments.

The Fuller & Johnson Mfg. Co., Madison, Wis., will build an addition which will cost about $125,000.

The Turner Advertising Co., Chicago., has changed its name to Johnson, Read & Co., 202 South State Street.

The Detroit Seamless Steel Tubes Co. has begun construction in Dertoit of a $3,000,000 plant on a 60-acre tract of land. The first unit will cost $1,000,000 and will be completed by Jan. 1, 1920. The plant proper will occupy a space of 350 x 700 ft.

The Detroit Pressed Steel Co., Detroit, is planning to take immediate possession of the Carlton Avenue plant of the Detroit Shell Co., which it has acquired as an addition to its Mt. Elliot Avenue factory.

The Kellogg Manufacturing Co., Rochester, N. Y., has increased its capital from $75,000 to $300,000 to provide for its increasing business.

The Victor Mfg. & Gasket Co., Chicago, has built a new plant, covering four acres of ground, which will more than treble its present capacity. The company also has plans for an 8-story, 100 x 300, warehouse and storeroom. Plans for an increase in capital to $1,000,000 are under way.

The J. E. F. Spark Plug Co. of Milwaukee has ed its corporate style to The Viktry Mfg. Co. name of the J. E. F. Sales Corp. has been chan Viktry Sales Co. The name of its principal p will be the Viktry Disc or V. D. spark plugs.

Nordyke & Marmon Co.'s new No. 3 plant at I apolis, consisting of a five-story body shop 600 ft a one-story final assembly building 900 ft. long power plant and other buildings, is being rush completion.

The Champion Brass Works, Coldwater, Mich add a line of automobile accessories to its normal facturing line. The concern will increase its stock from $15,000 to $75,000.

The Liberty Accessories Corporation of St. Mo., has increased its capital stock to $100,00 has purchased the plant of D. C. Gilliland Manuf ing Co. and will put a new line of specialties market in addition to the present line.

The Ramstack & Sons Mfg. Co., Milwaukee, is organized with a capital stock of $100,000 to ma ture the J. E. F. spark plug. The present plant J. E. F. Spark Plug Co. will be used by the new cern.

The organization of a new American compa handle automobile accessories in the foreign fiel been formed as the Overseas Motor Service with offices at 1760 Broadway, New York City.

The Giddings & Lewis Mfg. Co., Fon Du Lac, manufacturers of machine tools and special mach is establishing a new department for producing t transmission units.

The Kearney & Trecker Co., Milwaukee, manufacturers of machine tools, is erecting a addition, 40 x 480 ft., to provide for enlarged ca

S. A. Taylor has been appointed foreign repre tive of the Garford Motor Truck Co., Lima, O. is leaving on a trip to Africa and the Far East.

P. A. Doyle, formerly general sales manage the Ten Broeck Tire Co., St. Louis, has recentl signed to join the International India Rubber South Bend, Ind., as manager of its central di His headquarters will be at Kansas City, Mo.

Digitized by Google

The General Motors Corp. is planning to erect a dormitory building in Flint, Mich., for employees. The cost is estimated at about $2,500,000. It will be a seven-story building, occupying a full block, the building proper to be 280 x 214 ft.

---

The Carlisle Tire & Rubber Co., Carlisle, Pa., has opened a branch in Los Angeles, Cal., at 1003 So. Figueroa Street, which is in charge of R. C. Cooper, formerly connected with the Para Auto Tire Co., Chicago.

---

The Goodyear Tire & Rubber Co., Akron, has opened a branch in Little Rock, Ark., at 612 Louisiana Street. W. H. Ector is manager of the branch.

---

The Signal Electric Mfg. Co., Menominee, Mich., has been incorporated with $150,00 capital to take over the business of the Tideman Electric Mfg. Co. The Tideman company has established a new plant at Cairo, Ill.

---

The Norton Co. of Worcester, Mass., has opened a sales and stock room in Detroit at 73 West Congress Street.

---

The Parry Mfg. Co. and the Martine Truck and Body Corp., both of York, Pa., have been consolidated, the new company being called the Martin-Parry Corp. The change will in no way affect the company's method of doing business.

---

United Motors Service, with general offices in Detroit, has opened a branch in Buffalo at 1127-33 Main Street, where in addition to giving factory service on all motor car electrical equipment, it will also operate a special retail sales department.

---

J. H. McKeough has been appointed manager of the truck division of the Nash Motors Co., Kenosha, Wis. He succeeds L. F. Collins, who resigned to join the Memphis-Nash Motor Co.

---

The Peters Engineer Co., Philadelphia, is opening a factory branch of its welding and brazing service at 518 West 44th Street. Louis B. Lipschen & Co. are the metropolitan representatives.

---

Construction of an administration building for the Oakland Motor Car Co., Pontiac, Mich., to cost in the neighborhood of $250,000, will commence shortly, it is expected. It will be a four-story structure 384 x 54 ft.

---

The Advance Rubber Co., Brooklyn, N. Y., has opened a branch in Los Angeles, Cal., at 721 South Olive Street. Wm. J. Hartman is manager.

---

### Bacon Heads McGraw Sales

The McGraw Tire & Rubber Co. announces the appointment of H. M. Bacon as general sales manager, with headquarters at the company's main office in Cleveland, Ohio.

Mr. Bacon comes from the Diamond Rubber Co., where he has been in charge of sales since 1914. He is well known throughout the tire and motor car industry. After a long experience in the motor car fields, he joined the Diamond Rubber Co. in 1911 and became its sales head three years later.

### Fremont Motors to Make Cars and Trucks

The Fremont Motors Corp., Fremont, Ohio, has been organized with a capital stock of $2,000,000 for the manufacture of passenger cars and trucks. The company will specialize in the manufacture of a four-passenger car to sell at $1,285.

Manufacturing will be carried on at the plant of the Burford Motor Truck Co., which has been purchased by the new corporation. The manufacture of the present Burford truck will be continued. The first passenger cars will be manufactured in about 60 days.

Fred M. Guy, said to be the inventor of the rotary valve motor, will act as sales manager of the concern, while C. W. Whitmore, formerly of the Packard Motor Car Co., is in charge of factory management.

---

### "Why Magneto Ignition Makes a Good Engine Better"

A booklet entitled "Why Magneto Ignition Makes a Good Engine Better" has been brought out by the Magneto Manufacturers, 110 West 40th Street, New York City. The booklet tells why this association believes magneto ignition is superior to battery ignition. It contains 22 pages and is well illustrated.

---

### Coe Made Eastern Field Secretary of N. A. D. A.

Charles F. Coe of Boston has been appointed eastern field secretary of the National Automobile Dealers' Association. Coe is well known to the trade throughout New England and the northwest, having gained prominence in trade organization work. He was active in all the war "drives" and raised many thousand dollars in the various Liberty Loan campaigns.

---

### New York Registrations

Figures announced by the Secretary of State, covering the first six months' registration of motor vehicles in New York State show an addition of over 68,000 compared with the six months ended Aug. 1, 1918. Commercial cars have increased over 13,000, but motorcycles have decreased by over 4,700. On Aug. 1, 1919, New York State had a total motor vehicle registration of 504,771.

Comparative figures between Aug. 1, 1918 and Aug. 1, 1919, show an increase as follows:

In the first six months of 1918, the State automobile bureau collected $4,621,015, which is $607,136.50 less than so far this year. The last six months, as compared with all of last year, show an increase of 32,686 in passenger cars; 951 in omnibuses; 7767 in commercial cars, with a decrease of 585 in trailers.

Total receipts of the motor vehicle bureau on Aug. 1 this year amounted to $5,228,151.50, an advance of $282,854 over last year, when the receipts were $4,945,297.50.

---

### Zenith Tire Plant

The Zenith Tire & Rubber Co., Cleveland, will start construction of its new plant Jan. 1. The directors, at a recent meeting, voted to increase the capital stock from $10,000,000 to $20,000,000. The company will manufacture cord tires only. The Zenith company is made up of Cleveland, Akron and Washington men, with a backing of British and American capital.

### Marvel Cylinder Re-Boring Machine

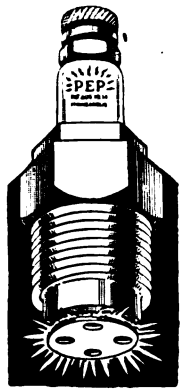
The Marvel No. 5 cylinder reboring machine is manufactured by the Marvel Machinery Co., Minneapolis, Minn. The machine is especially designed

to do extremely accurate work, and the working parts are automatic in action. An automatic stop is provided so that after the operator sets the machine he can do other work while reboring cylinders. A friction disc feed is used so that any desired feed from 26 threads to 120 threads to the inch can be secured either with the advance or return of the bar, which makes it possible for the operators to take a hurried roughing cut with a coarse feed and finish with a fine feed cut, thus producing a smooth cylinder wall. Each cutter is provided with a graduated scale to aid the operator to set it to the desired over-size in reboring. The machine will handle anything from a small motor cycle cylinder to a large tractor engine cylinder.

---

### Pep Spark Plug

The Pep Spark Plug, which is being placed on the market by the Pep Spark Plug Co., 932 McKnight



Bldg., Minneapolis, Minn., is provided with a disk electrode at its lower end, giving two inches of sparking surface. A ring of large, hot sparks all around the edge of the disk occurs as soon as the current passes through, and the disc protects the porcelain and prevents it from becoming fouled, it is stated.

### Black & Decker Lectroflater

An electric air compressor called the Lectroflater is being placed on the market by the Black & Decker Mfg Co., Baltimore, Md. It is of the self-contained unit type and the two-piece housing encloses the motor, the gear train and the compressor cylinder. End covers fastened with screws enclose the commutator and the brush rigging of the motor at one end and the gear train at the other. The compressor cylinder is fastened in the housing with machine screws through the flange on the cylinder head and that part of the housing enclosing the cylinder forms an air jacket for the cylinder.

In addition to being the frame in which the various parts of the machine are mounted, the housing completely encloses all these parts and forms one big air

jacket. A centrifugal fan on the armature shaft of the motor, draws air through the ports in the commutator end cover, circulates it through the motor and finally forces it around the compressor cylinder and out through the ports under the cylinder head.

The motor develops one-half horsepower and has a high starting torque. Both field and armature are built up of insulated laminations of high permeability.

The smallest size Lectroflater has a capacity of two cubic feet of free air per minute, which means that it will inflate a 34 by 4 tire from flat to 80 lbs. in about one and three-quarter minutes.

The entire machine with its high-speed motor is no bigger than the average slow-speed motor developing the same power, it is stated.

---

### "Klinch Linx"

"Klinch-Linx" are designed to replace one or any number of broken side links of tire chains. The links are simply slipped into place and clinched with a ham-

mer of pair of pliers. They can be used in an emergency to temporarily replace broken chain hooks. They are made by the American Auto Products Co., 1319 L Street, N. W., Washington, D. C.

# UNIVERSAL BATTERIES

*"The heart of any good starting and lighting system"*

Universal Starting and Lighting Batteries wear longer and give better satisfaction because they were built right in the beginning and are still right.

The original Universal Construction embraces all the modern ideas giving both strength and long life to a battery. No new processes can improve them. The plate is the real heart of the battery, and Universal time-tested plates are extra hard and yet porous, insuring exceptional endurance and capacity.

There is a complete **Universal** Battery for every popular make of car and a repair part for every standard make of battery.

Get acquainted with **Universal Battery Service,** a service that means prompt, efficient delivery of all batteries and repair parts.

**UNIVERSAL BATTERY COMPANY**
**3436 South La Salle Street**
**Chicago, Illinois**

DEALERS: We have an attractive proposition for you—an opportunity to increase your profits and to give superior service. Drop us a line today for details.

"Next Time Look for That Trade-Mark"

"Your battery has not gone to pieces, it has just naturally reached the point where any battery containing wood insulation in any form must be opened up and reinsulated.

"Don't blame the dealer or maker. You can't be sure of long life from ordinary insulation any more than you can get *cord-tire* service from an ordinary *fabric* tire.

"But next time get a battery with that circle trade-mark—a Willard with Threaded Rubber Insulation. It does not contain wood insulation in any form. It costs a little more, but it more than repays you in freedom from worry.

"With reasonable care these batteries simply go on giving perfect service until the plates are entirely worn out—and even we never realized what tough, long-lived plates a Willard has, till Willard Threaded Rubber Insulation gave them a real chance to show what they could do."

*Willard Service*

For more complete information call at nearest Willard Service Station.

*Wind a 24-hour clock and then hold your finger on the balance wheel (to stop it) say for six hours or days or weeks. When you release it, the clock will still run 24 hours.*

# A parallel to USL "Dry Charged" Storage Batteries

A PARALLEL in that the battery is first fully charged and given an *operating test* at the factory, making it ready to work.

Then the electrolyte is drawn off—and the battery sealed air tight. Now it *can't* work.

In this state, action cannot go on until the battery is unsealed and filled again with electrolyte; then regardless of the lapse of time between the finishing test at the factory and the day it's put in service, the battery delivers every hour of the work built into it at the start.

This USL "Dry-Charged" is the only method which makes it possible for the motorist to buy a battery that is perfected and tested at the factory; then held inactive, until ready for use. Not an hour of its service has been used; it's not shelf worn; it's as perfect as though placed on your car and driven away fresh from our testing rooms in Niagara Falls.

Before you buy your next battery let the *USL Service* man in your town tell you all about USL "Dry-Charged," USL machine-pasted plates and the USL 15-months guaranteed adjustment plan.

**U. S. Light & Heat Corporation, Niagara Falls, N. Y.**

USL TRADE MARK
U.S. LIGHT & HEAT CORPORATION

**FREE** *Our 50-cent Battery Book that answers every battery question. It's a book you can't afford to be without if you own or drive an automobile. It's free if you mention the make and model of your car.*

### The Man Who Sees Ahead

"I class men by the range of their vision. There are three classes: the man who looks backward, the man who looks at the present and the man who looks ahead," said M. B. Hoagland, sales manager of the Signal Motor Truck Co., in addressing a group of his salesmen recently.

"For the man who looks backward, there is little hope in business, for you will find that the same cobwebs are in his business that his grandfather allowed to collect.

"The man who looks at the present has some chance, for he is at least up-to-date, and being so is assured of a measure of success. He is posted on conditions as they are at present, and while there are no cobwebs around his office, the trouble is that the shutters are all drawn tight and not a gleam of the future percolates through.

"But the real man, the big man, the successful man, is the chap who looks at his business through a powerful telescope and sees it as it will be in the days after to-morrow. Instead of allowing his business to die out with the fading of the present day, he is planning on the demands and prospects of the future, so that, later on, the sun will come up and shine on an ever-increasing business.

---

C. E. Wilson, formerly of the Wesinghouse Electric & Manufacturing Co., has been made manager of the motor and equipment division of the Remey Electric Co., with complete supervision of engineering and sales.

---

John M. Pendleton has been appointed distributer for the Bessemer Motor Truck Co., Grove City, Pa., in New York State as far north as Schenectady; in New Jersey, north of Trenton; and in the entire states of Rhode Island and Massachusetts. He has opened headquarters under the name of the Bessemer Agency of New York, at 505 West Fifty-fifth Street, New York City.

---

H. L. McClaren, who recently resigned as president and general manager of the Ajax and Racine rubber companies, has become president and active general manager of the J. & D. Tire Co., Charlotte, N. C. He succeeds William F. Smith, who has resigned.

# Association Items

## AUTOMOBILE CALENDAR

ELLENSBURG, WASH.—Tractor Demonstration; W. L. Davis, County Agricultural Agent; October 15.

NEW YORK, N. Y.—Opening of International Farm Tractor & Implement Exchange, Grand Central Palace; October 15.

RALEIGH, N. C.—Car, Truck and Tractor Show; October 20-25.

SHREVEPOR, LA.—Car, Truck and Tractor Show; October 22-27.

CHICAGO, ILL.—Show, Auspices Automotive Equipment Association, Medina Temple; November 3-8.

DETROIT, MICH.—Annual Meeting, National Assn. of Motor Truck Sales Manager; Hotel Statler; November 7-8.

NEW YORK, N. Y.—Automobile Show, Hotel Commodore; November 16-23.

CLEVELAND, O.—Third Annual Convention, Ohio Auto Trades Assn.; December 3-5.

NEW YORK, N. Y.—Automobile Show, Auspices National Automobile Chamber of Commerce, Grand Central Palace; S. A. Miles, Manager; January 3-10.

NEW YORK, N. Y.—Commercial Car and Accessories Show, Eighth Coast Artillery Armory; January 3-10.

CHICAGO, ILL.—Automobile Show, Auspices National Automobile Chamber of Commerce, Coliseum; S. A. Miles, Manager; January 24-31.

CHICAGO, ILL.—Truck Show, Auspices National Automobile Chamber of Commerce, Drexel Pavilion; S. A. Miles, Manager; January 24-31.

KANSAS CITY, MO.—Fifth Annual, Kansas City Tractor Club; Guy H. Hall, Manager; February.

MANCHESTER, ENGLAND—North of England Motor Exhibition; February.

LOUISVILLE, KY.—Seventeenth Annual Convention, American Road Builders' Assn.; February 9-13.

LOUISVILLE, KY.—Meeting, Tenth American Good Roads Congress; February 9-13.

LOUISVILLE, KY.—Eleventh National Good Roads Show; February 9-13.

LOUISVILLE, KY.—Twelfth Annual Exhibition, Auspices Louisville Automobile Dealers' Assn., First Regiment Armory; February 23-28.

SAN FRANCISCO, CAL.—Seventh Annual Foreign Trade Convention; May 15-20.

# List-Prices of all Makes of Tires and Tubes

## REVISED MONTHLY

EXPLANATION:—Under each size we have placed the list price of not only Casings, but also Tubes. The letters to the left of the line show the Type of Tread and Color of Tubes. P means Plain Tread; N. S. Non-Skid; G. T Gray Tubes; B. T., Brown Tubes; R. T., Red Tubes; When price is given without letter or sign it means that the tire is manufactured in Clincher, Quick Detachable Clincher, and Straight Side or Dunlop types. When a C appears with the price it means that the tire is made in Clincher type only; when Q, in Quick Detachable only; when D, in Dunlop or Straight Side only; when †, in both Clincher and Quick Detachable; when *, in both Quick Detachable and Dunlop or Straight Side; when §, in both Clincher and Dunlop or Straight Side.

This compilation is for the benefit of the trade. We have used every care to give the latest authentic information, but we do not guarantee the absolute correctness of these prices and cannot be held liable for same. The Ferguson Publishing Co.

# Assured Mileage

IT isn't altogether what's put into tires that makes them dependable. As much rests upon *how* they are made.

Makers, for years, have been baffled by tires falling short in service, due to "buckles" and "mold pinches" arising during vulcanization.

In McGraw Tires, these structural defects are prevented, so far as humanly possible, by the Duplex Method. This process safeguards the casing during vulcanization. The fabric layers "set" smooth and even. No creases can form. The tire comes out of the molds a perfect structure. The user gets high and full mileage.

**The McGraw Dealers' franchise offers an unusual opportunity for profitable business. Write for details.**

# AJAX CORD

SUCCESS—spelled with a capital "S"—is being won by those tire dealers who sell the Ajax Cord. And by the word "success" we mean *real* success, in the fullest, biggest sense. Check up—yourself. Note the genuine prosperity of the Ajax Franchised Dealer in surrounding localities.

The Ajax Dealer's Franchise holds big money-making opportunity. Zone protection for dealers on the sale of the Ajax Cord (with the famous "Cleated Tread") and the Ajax Road King fabric tire, Ajax Tubes and Ajax H. Q. Tire Accessories.

A complete line of quality tire equipment, backed by high powered national and big city newspaper advertising.

# FEDERAL

## "Extra Gauge" Red Tube

### Extra Thickness Surplus Service

WHEN dealers recommend Federal EXTRA GAUGE Red Tubes they are really recommending extra miles of economical service.

Federal EXTRA GAUGE Red Tubes have a surplus thickness of pure, lively, durable rubber, They are built up in many layers, giving reinforced strength and freedom from porosity that especially adapts them for use with Cord or other over-size tires.

With extra thickness and superior strength, Federal EXTRA GUAGE Red Tubes combine greater resiliency that noticeably increases riding ease.

The use of Federal EXTRA GAUGE Red Tubes means genuine tire economy, because their longer life insures greater mileage and increased satisfactory service from casings.

**The Federal Rubber Company of Illinois**
**Factories, Cudahy, Wisconsin**

Manufacturers of Federal Automobile Tires, Tubes and Sundries, Motorcycle, Bicycle and Carriage Tires, Rubber Heels, Fibre Soles, Horse Shoe Pads, Rubber Matting and Mechanical Rubber Goods.

# BILTWELL TIRES

"MASTER OF THE ROAD"

## LONG SERVICE
of
## BILTWELL TIRES
**Lies in**

— the rich quality of materials used.

— the expert workmanship incorporated in their manufacture.

— the fact that they are extra well reinforced where stresses are applied.

— and the fact that the last word in rubber-making machinery is used in their construction.

*Some attractive territory is still available for the man who wants the best.*

**THE BILTWELL TIRE & RUBBER CO.**

**MADE AT AKRON**

# Announcing
# OVERSIZE GLOBE CORDS
# in Small Sizes
## GUARANTEED 8000 MILES

**$28.95**

**30 x 3½ Clincher Cord**

***Equivalent in every Measurement to 31 x 4 Fabric***

## FORD SIZE

*Also for*

**Overland Chevrolet Maxwell Briscoe Dort**

This is the only complete oversize 30 x 3½ cord tire. It enables the owners of small cars to enjoy the maximum of dependable service, riding comfort, and mileage economy that heretofore has been available only in tires of larger sizes for higher-priced cars.

These new oversize Cords are the satisfactory result of months of exhaustive test and experiment. The Globe Company, therefore, takes some little pride in making this unique announcement.

*Globe Tubes in Globe Tires make the ideal combination*

**$37.50**

**32x3½ Straight Side Cord**

***Equivalent in every Measurement to 33 x 4 Fabric***

## DODGE SIZE

*Also for*

**Crow-Elkhart Saxon Kline Patterson Studebaker 4 Elkar Allen Interstate Chevrolet Elgin Moon Nash Hackett**

Both these new tires are of the same high quality as all other hand-made, wrapped-tread, single-cure Globe Cords. They are made of the best materials, by skilled labor working carefully, by hand. They are made for a single purpose —to give the biggest possible mileage at the least cost per mile.

**Globe Rubber Tire Manufacturing Co.**
***Executive Offices:*** **1851 Broadway, New York**
***Factories:*** **Trenton, N. J.**

## EXCLUSIVE TERRITORY FOR DISTRIBUTORS

Distributors realize that the trend of the times is to cord tires.

The only tires made by this Company are cord tires. The only men who make them are cord tire specialists.

Distributors who are interested in obtaining the best the market affords should write or wire immediately for territory.

An extensive and intensive advertising campaign will be made in each territory where there is distribution.

*Write or wire today.*

**Syracuse Rubber Company, Inc.**
**Syracuse, New York**

*Built by Cord Tire Specialists*

## Trade Gossip

*(Continued from page 39)*

W. D. Bell, Detroit, Mich., who recently resigned from the Parker Rust Proof Co., is now connected with the Wilson Foundry Co., Pontiac, Mich.

C. C. Newburn has been appointed assistant sales manager of the Barker Motor Truck Co., Milwaukee, Wis. Before his connection nearly a year ago with the Barker company, he was connected with the sales department of Service, Diamond T. Corliss, Panhard and Traffic trucks, during a period of about twelve years.

Walter C. Cole, former secretary of the Detroit Board of Commerce, has returned from the army and joined the staff of the William M. Albee Co., Detroit, sales and advertising specialists for trucks and passenger car companies.

E. O. Floyd has been made general sales manager of the Rossendale-Reddaway Belting & Hose Co., of Newark, N. J.

Archer H. Harris has joined the Cleveland Rubber Corporation, Co., Cleveland, Ohio. He has been connected with the Firestone Tire & Rubber Co., B. F. Goodrich Co., Goodyear Tire & Rubber Co., and Republic Rubber Co.

E. T. Peterson, who was formerly district sales manager for the Commercial Car Unit Co. of Philadelphia, has recently become manager of the Buffalo branch of the Pennsylvania Rubber Co., Jeanette, Pa.

Louis J. McSweeney was recently elected vice-president of the newly formed Detroit Transmission Co. He has severed his connections with all other enterprises to devote his entire time to the new organization.

A. C. Merril has been appointed manager of the Boston branch of the Bearing Service Co.

F. G. Adams has been appointed manager of the Cleveland branch of the Bearing Service Co.

Charles A. Plumley, until recently commissioner of taxes in Vermont, has joined the legal department of the Firestone Tire & Rubber Co., Akron.

F. W. Warrington, assistant sales manager of the Denby Motor Truck Co., Detroit, is on an extended trip, during which he will study general business conditions in the West.

D. V. Halcomb, formerly field sales manager of the John Lauson Mfg. Co., has been made general sales manager of General Tractors, Inc.

E. C. Guthard will take charge of the Edgar C. Guthard Co., Chicago, manufacturer of Billmont wrenches. He disposed of his interest in the Northwestern Auto Supply Co., Billings, Mont., which he organized in 1914 to his father.

E. M. Ewald, who recently returned from averseas, will be manager of the wholesale finance department of the Continental Guaranty Corp., New York City.

The resignation of Frederick C. Gilbert, vice-president and director of the Timken-Detroit Axle Co., was accepted at a recent meeting of the Board of Directors.

Arthur H. Blanchard has been appointed professor of highway engineering at the University of Michigan, to occupy the chair recently established.

Leroy Rhodes has been appointed engineer in charge of farm machinery and farm buildings in the University of Nebraska department of agricultural engineering. He returned recently from ten months' service as a lieutenant in the aviation section in France.

Charles Melhado, who has been with the Republic Motor Truck Co. for four years, has been appointed sales manager for South America and the West Indies. He has left on a trip through South and Central America.

H. H. Rice, former treasurer, was elected vice-president of the General Motors Corp. at a recent directors' meeting. M. L. Prensky was promoted from comptroller to treasurer and Frank Turner was made comptroller.

Wallace C. Hood has been appointed general sales manger of the Standard Motor Truck Co., Detroit. Hood held this same position with the Standard company four years ago. More recently he was sales manager of the King Motor Car Co.

W. J. Munro, assistant advertising manager of the General Motors Truck Co., has resigned to return to his position with the Green-Fulton-Cunningham Co., which handles the advertising of the G. M. C. truck.

George N. Peck will become president and general manager of the Moline Plow Co., Moline, Ill., on January 1, succeeding President Allen.

George H. Green, who since 1911 has been connected with the Fifth Avenue Coach Co., New York City, in the capacity of chief engineer, has been promoted to general manager of the concern which is now operating approximately 300 motor busses over the streets of this city.

Emlen S. Hare, vice-president of the Packard Motor Car Co., Detroit, has resigned. His career with the Packard company started as truck salesman in New York. He then became sales manager and later president. He resigned as president to become vice-president of the parent organization in Detroit.

H. G. Pederson, formerly with the Wright-Martin Aircraft Corp., has joined the General Motors of Canada, Ltd., Walkerville, Ont. He will be in the production department.

Paul LaCroix, general manager of the Rubay Co. plant, Cleveland, Ohio, has been elected vice-president of the company.

The Parker Tire & Rubber Co. of Indianapolis has opened its plant.

The Goodyear Tire & Rubber Co., Akron, Ohio, will build a distributing branch at Regina, Sask., Canada.

# ll and Roller Bearing Data for Cars and Trucks from 1909 to 1919.

## KEY

**T AXLE BEARINGS**
Wheel.
Wheel.
ng Knuckle Thrust.

**WHEEL BEARINGS**

Bearing.

**RENTIAL BEARING**
Hand.
Hand.

I—Thrust.

**DRIVE BEARINGS**
J—Pinion or Worm Shaft Front.
K—Pinion or Worm Shaft Rear.
L—Worm Spindle Thrust Front.
M—Worm Spindle Thrust Rear.
N—Universal Joint Propeller Shaft.

**CLUTCH BEARINGS**
O—Clutch Shaft Pilot.
P—Clutch Shaft Rear.
Q—Clutch Yoke or Throwout.
R—Clutch Spider.
S—Transmiss. Eng. Clutch Shaft.

**MOTOR BEARINGS**
T—Camshaft Front.
U—Camshaft Rear.
V—Camshaft Center.
W—Crankshaft Front.
X—Crankshaft Center.
Y—Crankshaft Rear.

**TRANSMISSION BEARINGS**
AA—Main Shaft Front.
BB—Main Shaft Rear.
CC—Spline Shaft Pilot.
DD—Counter Shaft Front.
EE—Counter Shaft Rear.
FF—Reverse Idler Gear.

**FAN BEARINGS**
GG—Hub Bearing.
HH—Water Pump Shaft Bearing.
J J—Air Pump Shaft Bearing.

**STEERING POST**
KK—Thrust Upper.
LL—Thrust Lower.

TO USE THIS TABLE—Look in the key for the particular bearing you desire; note the letters in front of the bearing; find the car the mediately follows the name of the car, follow it until you find the letters shown in the key—the number immediately following is the key the bearing that we have used, turn to the equivalent table at beginning of Bearing Section; the key number is in the first column; by across you can obtain the type number of any manufacturer you desire. Ball bearings of all makes are interchangeable—we, therefore, give umber. In some instances you will find as follows: 307 x 1 *Y*″; this means, 307 bearing with a special width, namely, 1 *Y*″ wide instead of width employed. Where the letters B, C, N, D or T appear after the bearing, that letter must be used in ordering, as it is part of the manu- designation number.

ller Bearings, we give the name of the manufacturer, followed by the number, as (Hy. 16727) meaning, Hyatt bearing No. 16727. Timken an be supplied in parts, being composed of cone and cup. The numbers given show the cone first, as (5351-5320), 5351 being the cone and 5320 Where Timken Bearings immediately follow name of car and model, and before any letter is used, it means that all bearings mentioned in l are Timken Rollers.

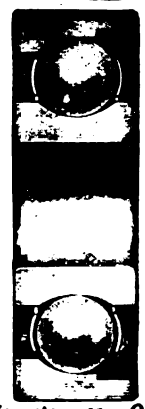
# FAFNIR

*Single Row Radial (Medium) 200 Series*

*Double Row Radial (Medium) 6200N Series*

*Double Row Radio Thrust (Medium) 8300 Series*



*Magneto or Open Type (Extra Light) 5100 Series*

## Fafnir Single Row Bearings Series 200, 300, 400.

Complete factory stock carried. These interchange with single row series of all standard makes.

## Fafnir Double Row Bearings Series 6200N, 6300N, 6400N.

Stocks carried of all most called for sizes. These bearings interchange with American width double row bearings.

## Fafnir Double Row Angular Contact Bearings 8200, 8300, 8400

These bearings have same dimensions as 6000N Series. They are designed to take exceptionally heavy thrust loads in addition to radial loads.

## Fafnir Magneto Type Bearings 5100, 5200, 5300 Series.

These bearings are largely used in magnetos and starting and lighting units.

### *Largest Assortment of Types and Sizes in America*

*Following is a list of distributors of Fafnir Ball Bearings. Substantial stocks are carried by all distributors and prompt and efficient service will be rendered by them on receipt of orders and inquiries.*

# Quality

## COMFORT - SAFETY ENDURANCE

NEW DEPARTURE Ball Bearings increase the enjoyment of the driver and passengers of a motor car.

No adjustments are possible or necessary.

Chrome alloy steels give New Departures a resilience that absorbs all stresses and shocks without endangering the proper functioning of the bearings.

New Departures are practically frictionless and outwear the car itself.

Engineering practice in America has established New Departures as an essential in the best motor cars.

**The New Departure Manufacturing Company, Bristol, Conn.**

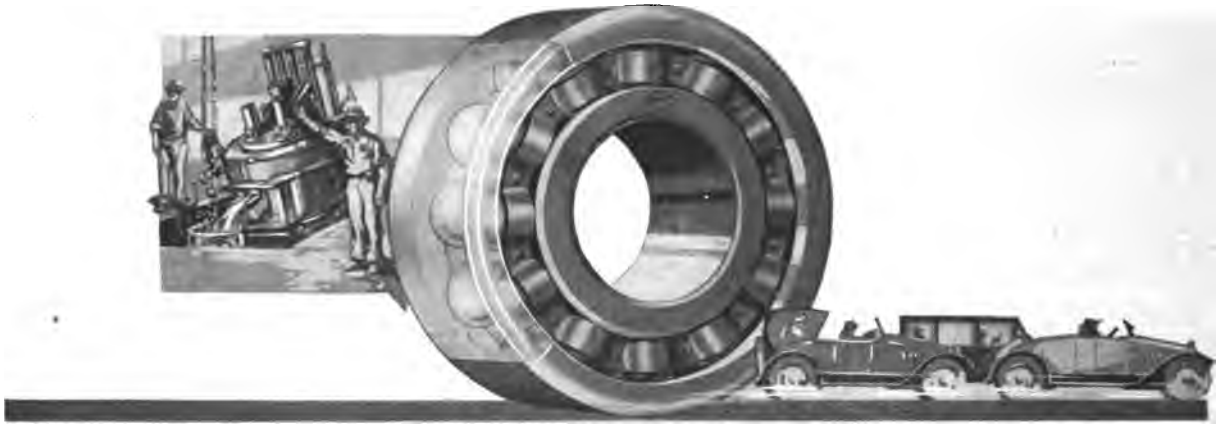
MR MARLIN-ROCKWELL INDUSTRIES

# Ball Bearing Quality Begins in the Crucible



AT the Braeburn Steel Company, near Pittsburgh, owned and operated by ourselves, we make the High-Chrome-High-Carbon Steel for

SRB

Single Row Double Row

## Annular Ball Bearings

THE difficulties and uncertainties of securing in the usual market a steady supply of bearing steel of unvarying highest quality to meet our growing requirements, determined us to purchase the Braeburn Steel Company, one of the pioneer tool steel mills of the country, which our records showed had furnished the best steel over a period of years. Now, after a year of standardization work, we have accomplished for ourselves what could not be done for us—adapted a single source of steel to our entire requirements, eliminating all variation from our exacting quality standard and insuring at all times regularity and adequacy of supply.

Thus in the manufacture of S R B bearings we safeguard and co-ordinate every step of manufacture from the raw metals to the superbly finished product that is called upon to function with unfailing reliability at the most critical load-carrying friction points in automobiles, trucks, tractors, and industrial machinery.

In our own mill we are able to specialize in our bearing steel as can not elsewhere be done, assuring a correctness and uniformity of method in the "heats" of the electric furnaces, the hammering and rolling of the ingots, and finally the all-important process of "annealing," for which especially designed furnaces have been provided.

The S R B mark on Ball Bearings or Taper Roller Bearings is proof of the most highly specialized products of their kind. You will find them in those motor cars, trucks and tractors whose names are instantly thought of as leaders in their respective fields.

*IN our operations at Braeburn we have provided amply increased capacity to continue to supply the many customers who have long depended on this mill for their High Speed and other grades of Tool and Special Steels*

*Fully Equipped Service Stations in Principal Cities*

# A LARGE BALL
## will carry more load than
## A small one

## BECAUSE

Every increase in ball diameter brings the curvature of the ball nearer to that of the surface on which it rolls. The slight natural deformation of the ball under compression makes a larger area of contact. This reduces the unit pressure, making safe the carrying of a greater load.

In Gurney Ball Bearings the method of assembly permits the largest possible balls and in addition the curvature of the raceways is such that it fits very closely the curvature of the balls. The load carrying capacity of each ball is thus made equivalent to the capacity of about 26 balls of the same size on a plane surface and is **one** of the reasons for the unusual carrying capacity of Gurney Ball Bearings.

# The Salesman Should Know How His Car Is Built

## Should Have a Good General Knowledge of Automobile Design and onstruction—This Will Enable Him to Put Up Strong Selling Arguments

*By EDWARD G. INGRAM*

the selling of motor cars part of the dealer's work consists of discussing the relative advan- s of different features of design and bringing in a clean and comprehensive manner the rea- why he believes the particular features incorpo- d in his car are most desirable. This necessarily ns that a really good automobile salesmen ıld have a good general knowledge of automo- design and construction. Passenger car sales- in particular will often be called upon to dis- the characteristics of their cars from the angle ıe engineer. Quite often salesmen are not at all rested in engineering, and fail to give this sub- the attention they should. This is a mistake, the salesman should be able to put up as strong ng arguments upon this subject as upon any r. The successful salesman is the one who ects no part of his education which will assist in his work.

ı building up a sales organization it is always to have one man who is a sales engineer. In tion to being called upon to talk to those cus- ers who wish to discuss the car from an en- ering standpoint, he can be used to educate the well-informed members of the organization.

considerable proportion of the automobile buy- public of today have some knowledge of auto- ile design and construction, imperfect as it may and if the salesman cannot talk intelligently on subject and give satisfactory answers to all ıtions, sales are sure to be lost.

any salesmen do not realize that in many cases ne type of construction possesses all of the antages of the others and none of the disadvan- s. Very often the engineer is forced to com- nise by taking into consideration the character ervice for which the car is being built and sing the type of construction which will come est to meeting the requirements.

or example, there is the much-talked-of subject alve location. Where the highest efficiency is red there can be no doubt that the overhead tion is the best. With this arrangement the e of the combustion chamber can be made more nearly ideal, and since the valves open directly into the cylinder, higher volumetric efficiency can be obtained. Owing to the necessity for rocker arms, however, this type of engine is apt to be more noisy in operation. The designer has to decide whether extreme efficiency or extreme silence is most desired by the class of buyers to which the car is to be sold.

Then there is the question of the number of forward speeds to be provided in the transmission. Theoretically the greater the number of gear changes provided the greater the efficiency obtained, but practically few people like to change gears any more than possible. The designer is therefore forced to provide as few forward speeds as possible without seriously affecting the performance of the car. Many factors have to be taken into consideration in connection with this. For example, if the engine has many cylinders and is extremely flexible, a three-speed transmission will usually be most satisfactory, while if only four cylinders are used and the car is rather heavy, compared to the size of the engine, a four-speed transmission may be required.

In the case of rear axles, the engineer has to decide between the semi-floating, three-quarter floating and full-floating types. The semi-floating type is lightest in weight and probably the cheapest to build. The full-floating design, on the other hand, is, theoretically speaking, the best, because all of the weight of the car is carried on the housing and the axle shafts have only to transmit the torque or turning effort to the wheels. Another advantage with this type is that if an axle shaft breaks the rear wheel will not come off. The three-quarter floating type is similar to the full-floating type except that lateral strains on the wheels are transmitted to and taken by the axle shafts. The three-quarter floating type also can probably be built slightly lighter than the full-floating type.

Cost considerations are also an important factor in deciding what type of construction should be used. This is particularly true in the case of low-

Digitized by Google

priced cars, for the designer must constantly keep the question of cost uppermost in his mind.

The thermo-syphon type of cooling system, for example, is cheaper to build than the pump type and works very well for moderate-sized cars provided with not too high-speed engines. But with larger and more costly cars provided with high-speed engines it usually is found more desirable to use the forced type of water circulation.

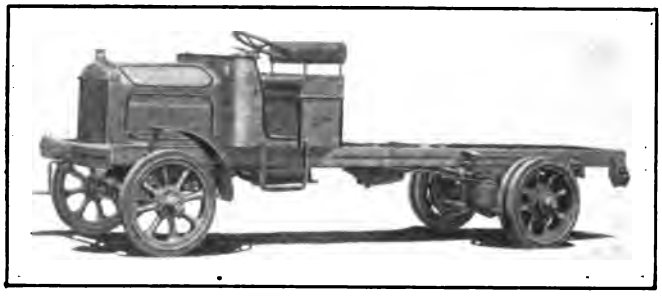
### Will Build Rolls-Royce in America

Plans were announced in New York for the formation of a corporation capitalized at $7,000,000 to manufacture Rolls-Royce cars in this country. The announcement was made by Aldred & Co., bankers at 24 Exchange Place, that they had agreed to finance the proposed corporation as a branch factory of the English firm of Rolls-Royce, Ltd. It will be financed entirely by American capital as, under present war acts, British capital cannot be transferred to other companies for industrial purposes.

The American company, however, will manufacture a chassis practically identical with that made in England. The Rolls-Royce aero engine, parts of which were built in America during the war, also will be constructed at the new factory, the location for which was not announced.

### New Garford 3½-Ton Truck

Another new model of truck is being placed on the market by the Garford Motor Truck Co., Lima, Ohio. Following the recent announcement of a 1½-ton truck the company now announces a 3½-ton model which differs from the former



NEW GARFORD 3½-TON TRUCK

3½-ton model in that the wheelbase is longer and the engine is placed forward of instead of under the seat.

This latest model is not intended to supplant the former 3½-ton truck. Both will be available, thus affording two 3½-ton models from which to select; the one being of the conventional long wheelbase type, the other being of the original Garford design with an extremely short wheelbase.

The general design of the new truck is similar to other Garford models. The four-cylinder engine has a bore of 4½ inches and a stroke of 6 inches. Timken axles are used, and the wheels are steel. Dual tires are used on the rear wheels, the dimensions being 36 x 5. The wheelbase is 132 inches.

### 2½-Ton Kankakee Truck

The Kankakee 2½-ton truck is manufactured by the Kankakee Automobile Co., Kankakee, Ill. A feature of this truck is that it is provided with a six-cylinder engine of continental manufacture, having a bore of 3½ inch and a stroke of 5¼ inch. Instead of the usual pressed steel, the frame is made almost entirely of rolled steel, channel section, that is, structural steel. The company states that after severe tests, it has come to the conclusion that this type of frame is superior. A Russel in-

2½-TON SIX-CYLINDER KANKAKEE TRUCK

ternal gear rear axle is used and the power or driving shafts are entirely independent of the dead, load-carrying axle. This makes it so that deflection of the load-carrying axle, due to heavy loads, will not cause any strain on the driving shafts. The driving shafts are located forward of the dead axle, thus shortening the length of the propeller shaft. Another advantage with this construction is that the direction of the driving pressure of the pinion teeth is almost directly downward. In other words, the power transmitted to the rear wheels of the truck tends to lift the weight of the truck and load off the wheel bearings. With the driving shafts behind the dead axle, the opposite conditions would prevail and the driving pressure of the pinion teeth would be added to the load on the wheel bearings.

The transmission is made by the Muncie Gear Works, and provides three speeds forward and one reverse. The clutch also is made by this company, being of the dry disc type. Solid tires are used as regular equipment, the front being 34 x 4 inches and the rear 34 x 6 inches. The price of the chassis is $2465. Bodies are built to order.

### New National Six Has Overhead Valves

An entirely new model of National has just been brought out by the National Motor Car & Vehicle Co., Indianapolis, Ind. The case is powered with a 3½ x 5½-inch, six-cylinder overhead valve engine, which develops 71 brake horsepower at 2600 r. p. m., this being the first time that an overhead valve engine has been used by the National company. Five body styles are offered, ranging in price from $3150 to $4250. The car weighs 3600 and has a wheelbase of 130 inches.

### Wallis Tractor Changes Name

The name of the Wallis Tractor Co., Racine, Wis., has been changed to J. I. Case Plow Works Co. It is understood that the tractors made are to be listed under the trade name "Wallis" and the implements under the name "Case."

# Lieut. Foy Arrives at San Francisco

## vers 7981 Miles in Making Ocean-to-Ocean Trip for Motor Record—Furnishes Data on Cost of Making Trip—Will Return by Southern Route

FTER having covered slightly less than 8000 miles, in making his ocean-to-ocean automo- trip for Motor Record, Lieut. Foy arrived in Francisco on the evening of September 23. left New York City on May 23, and spent 123 s on the trip, which has taken him through 16 erent states.

he car in which Lieut. Foy made the trip is a Buick Roadster, using McGraw fabric tires tubes as the equipment.

enerally speaking, the Lincoln Highway was route followed on the trip, though in a number ases side trips were taken to such places as eland, Ohio, Cincinnati, Ohio, Indianapolis, , Denver, Colorado, and, due to the Lincoln hway being in extremely poor condition be- en Salt Lake City, Utah, and San Francisco, fornia, a route through Idaho and northern ada was chosen for this portion of the trip. it. Foy reports the roads in very poor condition f the way west from Omaha, Nebraska. Con- rable sand was encountered, and in many places roads were badly cut up with ruts. In Nevada roads in many places are almost impassable, centers, an overabundance of dust, and deep being the cause of many disabled cars and en springs. The extremely poor condition of roads this year can be attributed to the large ber of touring parties who are on the road, also to a great extent to the fact that the ernment Motor Transport train of trucks which t west over the Lincoln Highway gave the roads sual wear, the heavy trucks with large tires cut- deep ruts in many places.

or the benefit of readers of Motor Record who wish to know of the performance of the car on a trip, a trip which for 8000 miles has given car and tires an unusually severe test, Lieut. has given us the following information and :

On my trip across the continent I covered 7981 s over some of the worst roads which I have seen. This was particularly true of the roads t of Cheyenne, Wyoming, where the roads were ad shape. In one place in Nevada it was neces- to take eight hours to make 32 miles. The in this particular spot was filled with ruts, ch were full of dust. It was impossible to see e holes, and the wheels of the machine would ply fall into them as one drove along. The best d that could be made was approximately five s per hour.

My Buick car stood the trip very well.

Most of the difficulty with the engine was caused he valves becoming overheated and warping. sometimes necessitated the renewal of a valve alve cage, but often meant simply a regrinding for some garage along the road. It was neces- to buy only one new spark plug on the whole . The radiator developed leaks twice on the , once in Ohio and once in Nevada. It was ssary to have it taken off and repaired in both s. The leaks were caused by severe jolting rough roads. No trouble at all was expe- ced with the rear end, transmission or running gear. The electrical system, both ignition and starting and lighting, worked perfectly throughout the whole trip. The breaker points in the timer were adjusted four times simply to take up the wear.

"McGraw fabric tires and red tubes were used during the whole trip. These tires gave very good satisfaction. The front tires covered the total distance, 7981 miles, without a puncture, New York air being in them on the arrival at the Pacific coast. This is exceptionally good mileage for a fabric tire when the extreme road conditions are considered. The rear tires showed very good wear, but were cut by sharp rocks, which had been placed on the highway as the roads were being repaired. Had it not been for these cuts, the rear tires would undoubtedly have given about 7000 miles.

"The following data is given with the view of showing the cost of operating a car of this class on cross-country work, and should be of value to the salesman who is traveling on the road, although ordinarily the road conditions would hardly be this severe. Prior to starting on this trip my car had been driven nearly 15,000 miles. The repair bill on a new car would naturally be much lower, but the figures on this car will give a general idea of what the cost of repairs would be on a car which has seen considerable service:

| | |
|---|---|
| Total number of miles run | 7981 |

GASOLINE DATA

| | |
|---|---|
| Total number of gallons used | 400 |
| Average price per gallon of gasoline | 24.8c |
| Gasoline average (miles per gallon) | 19.9 |

LUBRICATING OIL DATA

| | |
|---|---|
| Total number gallons used | 49 |
| Average price per gallons | 26.7c |
| Oil average (miles per gallons) | 163 |

TIRE DATA

| | |
|---|---|
| Total cost of tires | $248.10 |
| Number of miles traveled | 7981 |
| Tire cost per mile | 3.11c |

REPAIRS

| | |
|---|---|
| Overhaul | $45.55 |
| New valves and cages and regrinding | 17.15 |
| Radiator repairs | 14.50 |
| Front spring | 13.00 |
| Tire repairs | 4.75 |
| Fender repairs | 1.75 |
| Repair tire carrier | 6.50 |
| Oiling, greasing, miscellaneous adjusting | 15.65 |
| Total repairs | $118.85 |

TABLE SHOWING COST PER MILE

Depreciation *Not* Included

| | |
|---|---|
| Gasoline | 1.25c |
| Repairs and greasing | 1.49c |
| Oil | .16c |
| Tires | 3.10c |
| Total cost per mile | 6.00c |

Digitized by Google

"In addition to the above, 50c to $1.00 was charged for storage on the car left in a garage over night. This amounted to $71.50 for the 123 days spent on the transcontinental trip. This item, however, can hardly be charged to cost of operation of the car."

Lieut. Foy will spend a month or six weeks in California, and then will drive back to New York through Arizona, New Mexico, Texas and the south, keeping accurate figures on the cost of operating the car per mile. On the return trip he will use McGraw cord tires instead of McGraw fabric tires.

## National Automobile Shows to Be Greater Than Ever

With a record list of exhibitors, the National automobile shows to be held in New York and Chicago next winter, under the auspices of the National Automobile Chamber of Commerce, will undoubtedly be the greatest in the history of the industry. No less than 87 different makes of passenger cars will be displayed, while 60 makers of trucks have already secured space to exhibit their products. The displays of accessories will be greater than ever before, and at least a dozen new makes of cars will be shown for the first time.

The New York show will be held during the week of January 3d to 10th. Grand Central Palace will be utilized for passenger cars and accessories, while the Eighth Coast Artillery Armory, Kingsbridge Road and 194th Street, will house the motor trucks and sundries. Exhibitors can for the first time in the history of motor truck shows secure all the space they need, for the main hall of the Armory is 300 x 600 feet and is not obstructed with posts. A transportation conference will be held at the Armory during the show, at which experts on transportation matters will speak.

The following makes of passenger cars will be exhibited at both the New York and Chicago shows:

Allen, Amalgamated, American Beauty, Anderson, Apperson, Auburn, Biddle, Briscoe, Buick, Cadillac, Case, Chalmers, Chandler, Cole, Chevrolet, Cleveland, Columbia, Comet, Commonwealth, Crow-Elkhart, Davis, Detroit Electric, Dixie Flyer, Dodge Bros., Dorris, Dort, Elcar, Elgin, Essex, Fiat, Franklin, Grant, Haynes, Hollier, Holmes, Hudson, Hupmobile, Jackson, Jordon, King, Kissel Kar, Lach, Lexington, Liberty, McFarlan, Maibohm, Marmon, Maxwell, Mercer, Milburn Electric, Mitchell, Moline-Knight, Monitor, Moon, Nash, National, Oakland, Oldsmobile, Olympian, Overland, Owen-Magnetic, Packard, Paige, Paterson, Peerless, Pierce-Arrow, Premier, Reo, Roamer, Saxon, Sayers, Scripps-Booth, Standard, Stanley, Stearns-Knight, Stephens Six, Stevens-Duryea, Studebaker, Stutz, Templar, Velie, Westcott, Willys-Knight and Winton.

The Kline Kar will be exhibited at New York only, while the Pilot and Monroe will exhibit at Chicago only.

The following makes of motor trucks will be exhibited at both the New York and Chicago shows: Acason, Acme, American, Atterbury, Autocar, Bethlehem, Clydesdale, Defiance, Denby, Diamond T, Dodge Brothers, Dorris, Federal, Fulton, Garford, Indiana, International, Jackson, Kissel, Maccar, Master, Nash, Oldsmobile, Oneida, Overland, Packard, Paige, Pierce-Arrow, Reo, Rowe, Schacht, Selden, Standard, Stewart, Union, Velie, Vim, Walker, Walter and Wilson.

The following makes will exhibit at New York only: Brockway, Commerce, Corbitt, Four Wheel Drive, Kelly, Koehler, Nelson & LeMoon, Rainier, Sanford, Sterling and Ward.

The following makes will exhibit at Chicago only: All American, Armleder, Dependable, Gramm-Bernstein, Kalamazoo, Obenchain-Boyer and Service.

### Control of Premier Taken by Skelton

L. S. Skelton, formerly of Okmulgee, Okla., has become head of the Premier Motor Corp., Indianapolis, Ind., with the purchase of 65 per cent of the stock. He will assume the general management of the concern. The department heads, Skelton has announced, will be retained. The plant will be enlarged immediately, Skelton said. Quantity production on the new model Premier will be started soon. About 200 cars of this model have been practically completed.

### Delco Light Bought by General Motors

Purchase of the Domestic Engineering Co. by the General Motors Co. has just been announced here by W. C. Durant, president of the purchasing concern. The Domestic company is the manufacturer of "Delco Light" and farm lighting systems, and will be operated as a branch by the motors company. Extensive plant additions will be undertaken immediately so that capacity may be increased greatly.

### Overland in Big Lumber Deal

The Willys-Overland Co. has taken over the hardwood lumber supply of W. T. Hubbard, approximating 8,000,000 feet, for use in the manufacture of motor car bodies, according to news from Toledo, Ohio. An output of sedan and coupe bodies double that of any previous month will be turned out by the company. The price for the lumber was not given out. The present average price is 25 cents a foot.

### Lincoln Car to Be Announced

It is now stated that the Lincoln Motor Co., Detroit, will formally announce the new car which it proposes to manufacture about the middle of December. The company has virtually completed its organization and is ready to go ahead. This car was to be announced in September, but last minute minor changes caused the announcement to be delayed.

Dealers are confident that the new Lincoln car will be exhibited at the national shows in January. The big plant is now in operation and no visitors are permitted in the mechanical department.

### Cole Motor Car Co. Expands

To meet the increase in its business and to accommodate its production of cars to the demands of its distributer and dealer organization, the Cole Motor Co., Indianapolis, Ind., has embarked on a program of enlargement and expansion which, when completed early in 1920, will afford the company a factory more than twice the size of the present plant and permit of a production of 12,000 eight-cylinder cars in 1920.

# Must Study Chemistry of Combustion to Solve Fuel Problem

## ı Means of Controlling the Way in Which Fuel Molecules Break Down Is Found, Low Grade Fuels Can Be Used With Satisfaction*

*By C. F. KETTERING*
President of the Dayton Engineering Laboratories

HE fuel problem, as it exists today, divides itself into two general classes, one of which be;s to the automotive manufacturers and the :r belongs to the fuel manufacturers. However, ɔmplete solution in either case is impossible ıout the hearty co-operation of both industries. he internal combustion engine is essentially a nical device, and, until we begin to analyze the ditions which take place after the fuel starts to n in the cylinders, we shall be disappointed in result obtained after the things mentioned preısly have been done.

he one important thing in lower gravity fuels is fact that they give rise to the phenomenon comly known as the "knock," variously understood e "prematuring," and supposed to be brought ut by the deposit of carbon in the combustion mber. It has been conclusively demonstrated repeatedly checked, that the "knock" which ırs in a motor and supposed to be due to carbon, ıot caused by pre-ignition, but is produced by nature of the combustion, which, in turn, is trolled entirely by the molecular structure of fuel.

: is a well-known fact that gravity is in no e a measure of this knocking phenomena, as oils n the California crudes of very low gravity—familiarly known as "Twenty-seven Plus Fuel '—gives a great deal better satisfaction than a r gravity oil refined from Pennsylvania crudes. reason for this is that in the California crudes :e is a large percentage—roughly forty—of the alled cyclic compounds.

. great deal of work has been under the writer's ervision during the last three or four years in determination of what takes place when the vier fuels burn in a cylinder, and a few conclus have been arrived at, which may be briefly ressed as follows:

Vith lower gravity fuels it has been necessary to er the compression. Lowering the compression, urn, has facilitated the formation of carbon and ɔon, in turn, has aggravated the "knock." The ɜon is simply this: Increasing compressions re; in higher instantaneous temperatures, and the h instantaneous temperatures result in a type of ıbustion which makes possible an exceedingly id rise in pressure, this rise being of very short ation. Lowering the compression gets away n this, with the result that if the engine is run-g at low throttle, a precipitation of carbon in the ıbustion chamber is caused. This deposited carforms the best possible type of heat insulator permits, again, the temperatures of combustion ise above the critical point which had been elim-ɐd by reducing the compression.

'his discussion is mentioned here for the simple pose of showing that lowering compression is only a temporary remedy. Lowering compressions, increasing bores of cylinders only decreases the efficiency of the engine, and as long as the fuel burns so as to produce these abnormally high pressures we will have the "knock" trouble sooner or later.

It has been proved positively that certain things can be added to the fuel which would not necessarily increase its gravity, but which render the engine free from "knocks." These additions to the fuel can roughly be divided into two classes—the high percentage class and the low percentage class. By high percentage class we mean from twenty to forty per cent, and by low percentage class we mean from one-half to three per cent.

An example of the former is an introduction of benzol. Forty per cent benzol mixed with ordinary commercial kerosene makes an engine operate entirely satisfactorily, and if the engine in which this mixture is used is running at or near its full load no bad results will be experienced in the way of carbon deposits. An example of the latter case is that of iodine. One or two per cent of iodine added to ordinary kerosene will reduce its knock-producing property, to an entirely negligible point. It will permit the use of high compressions, result in cleaner combustion, and outside of difficulty in starting, makes a lower gravity fuel entirely practical.

The knock-producing ability of a fuel is not a function of its gravity, as might be gathered from the foregoing, as sulphuric ether, which is one of the lightest fuels that we have, is also one producing the most intense "knock." We have discussed this "knock" proposition as a preliminary thing so that the matter of the future fuel supplies might be better understood.

As oil men fully understand, about twenty per cent of crude is available as gasoline, twelve per cent as kerosene, approximately fifty per cent is gas and fuel oil, and the remainder lubricating oil and residue products. A large per cent of gas and fuel oil could be refined into a water white oil and this, were it not for its "knocking" tendencies as a fuel, is one of the most hopeful sources of increased supply. We also understand the extent to which oils are being cracked into gasoline.

It might be of interest to know that a fuel which will not "knock" under normal conditions will not produce abnormal rise in pressure, even though the fuel be fired far in advance of the normal point of ignition. So that a fuel, which would not "knock" normally, will not "knock," even though the engine is heated to the point at which pre-ignition will occur.

It is also definitely understood that the temperature of the cooling water in an engine may or may not greatly affect the temperature of the explosive mixture during the process of combustion, as the

tract from paper read before S. A. E.

Digitized by Google

thickness of cylinder walls, condition of carbon inside of the cylinders, etc., may be such that the engine, from external appearances, will be running perfectly cool, and yet the conditions inside of cylinders will be such as to bring the temperature of the mixture during combustion above the critical point at which the knock occurs.

Pressure and temperature have a tremendous effect upon the way in which compounds burn. It is well known that when smokeless powder is lighted in the open air by a match or cigar butt it will burn without any rapid rise in pressure, but if the products of this primary combustion be confined so that both temperature and pressure rise, the result is quite different, a tremendous pressure being developed.

From our experimental work it appears to us that reactions similar to the above take place when we burn the heavier molecules of our present-day fuels, that secondary compounds are produced during combustion, and that the rapid rise in pressure resulting from the combustion of the secondary compounds produces what is known as the "knock."

It is the writer's firm conviction that it is possible, as mentioned before, to refine a great deal more of our present crudes into motor fuel and to produce absolutely satisfactory results in engines of very much higher compressions than those now used if we can control the way in which the fuel molecules break down.

## Fordson Dealers Will Retain Control of Implement Distribution

While Fordson distributors will lose control of the tractor by July 31, 1920, they still will retain control of the distribution of all farm operative equipment approved by Henry Ford, according to news from Cleveland, Ohio. The Fordston tractor itself will be distributed through the Ford Motor Co. branch houses and will be handled as Ford product exclusively by Ford dealers, but the equipment lines will reach the dealers through the same channels of distribution they have in the past.

It is the purpose of the Ford organization to make its selling organization the strongest and most aggressive in the tractor field. At present about 4000 Ford dealers handle the Fordson tractor, but it is planned to have the remaining 4000 take it on within the next year. As these dealers will be expected to handle the approved equipment also, the result will be that 8000 new implement dealers will be going after business by the end of another year.

## Williams Made General Sales Manager of Mac-Lar

Mr. P. B. Williams has been appointed general sales manager of the Mac-Lar Battery Co., Inc., Detroit. For several years Mr. Williams has been well known in the battery business.

## Field Manufacturer Company Adding Large Addition

Field Manufacturing Co., Owosso, Mich., manufacturer of commercial truck bodies, is now adding a large addition to its present plant. The entire plant will be equipped with new and automatic machinery.

Plans are now being laid for the manufacture of at least 100,000 units during the season of 1920.

## Only Overland Model Will Be the Four

Production of the Overland 4, which is the only Overland model to be produced in the future, is now well under way at the plant of Willys-Overland, Inc., Toledo, Ohio. The Willys-Knight and Willys Six will be built by the newly-formed Willys Corp. in the former Duesenberg plant at Elizabeth, N. J.

The Overland 4 touring car and roadster will sell for $845, and the sedan for $1355. The price of the coupe will be $1225.

Only minor changes have been made in the Overland 4 as it appeared at the New York show in January, 1919. The chief feature of the car from

OVERLAND 4 TOURING CAR

a mechanical standpoint is the method of sprin suspension, which, with a wheel base of 100, give a spring base of 130 inches. The springs are vi tually of the cantilever type, but are set at a angle and project ahead of the front axle and b hind the rear axle, the overhang being 15 inches a each end. This makes it possible to build a ca weighing less than 2000 pounds with the maximu room for its occupants.

A unit power plant is used and the propell shaft is enclosed in a torque tube. The rear ax is of the three-quarter floating type, enclosed in malleable iron housing. There are no cross pie es between the rear end of the frame and the engi ne support, the frame consisting of two parallel si de members with heavily reinforced end pieces, to which the springs are attached. Thus it will be seen that flexibility is aimed at, rather than rigidity. The cylinder dimensions are 3⅜ by 4 inches, the block type of construction being used, with the valves all located on one side. A plate clutch is used, and the gearset is of the conventional three-speed forward and one reverse type. On the high gear the car is geared 4.5 to 1. Cooling is by thermo-syphon, and lubrication by the circulating splash system. The gasoline tank is located under the cowl and the fuel is fed by gravity to the Tillotson carbureter. Auto-Lite starting lighting and ignition is used. The wheels are provided with 30 x 3½-inch clincher tires.

## New Gray & Davis Catalog

Gray & Davis, Inc., Boston, Mass., have just brought out a new catalog of their product. It is in three colors and attractively gotten up.

## Set Dates for Nashville Show

Members of the Nashville Automobile Trade Association, Nashville, Tenn., have selected February 9 to 14 as the dates for their annual show this year. The association believes that this year's show will be one of the most successful ever held in the south, and elaborate plans are being worked out for original features.

SUBSCRIPTION RATES

United States and its Possessions, $3 a Year. Single Copies, 35 cents. Canada, Mexico, and Other Foreign Countries, $5 a Year. 20 Shillings.

Entered as Second Class Matter, July 17, 1917, at the Post Office at New York, New York, under the Act of March 3, 1879.

NOTICE TO ADVERTISERS

Insertion of new advertisements or change of copy cannot be guaranteed if received later than the 25th of the month preceding the date of publication.

IT IS well known that the vibration experienced with a four-cylinder engine after a fairly high speed is reached is not due to the fact that there is a longer interval between the explosion than where more cylinders are used, but is due to lack of perfect mechanical balance. Two of the pistons of a four-cylinder engine are always moving in the opposite direction from the other two. If at relative speed of the two sets of pistons was always the same at any point in the stroke, there would be no vibration, but owing to the angularity of the connecting rod, this is not quite the case. For this reason, a four-cylinder engine always vibrates, and this vibration increases as the square of the speed of revolutions, so that if the speed is doubled the vibration is four times as great.

It is often the case that there is more than one satisfactory solution to a problem. Until recently the only practical solution to the above problem was to increase the number of cylinders to six. The motion of the pistons in a six-cylinder engine is such that it is in perfect mechanical balance. This solution is an excellent one, as has been proved by the success of the six-cylinder car, but it involves some increase in mechanical complication. Another solution in the form of the Lanchester anti-vibrator has just been brought out. This device consists of two reverse rotating balance weights which exert forces which tend to cancel out the unbalanced forces in a four-cylinder engine. The device is extremely simple in design and, it is stated, is capable of being applied with little, if any, structural alteration.

Since the eight-cylinder V-type is really two four-cylinder engines placed at an angle of 90 degrees, it possesses the same defect of not being in perfect mechanical balance. The Lanchester anti-vibrator can also be applied to this type of engine.

---

PRODUCTION is being pushed almost everywhere in the United States to meet the enormous demand for cars. While strikes have interfered, nevertheless production is increasing at a rapid rate. In Indianapolis, for example, manufacturers are doing everything possible to increase production, and according to recent reports nearly every maker in this city has improvements under way or is planning improvements which will mean greater production.

The Nordyke & Marmon Co. is planning a production of 5000 cars. To accomplish this two new buildings are being constructed that will give an increased working space of 350,000 square feet. This is in addition to the unit constructed for the manufacture of Liberty engines, which is now available for automobile making.

At the plant of the Cole Motor Co. it is stated that 6500 cars will be produced in 1920. The National Motor Car & Vehicle Corp. plans to build 6000 of the new Sextet model during 1920. The William Small Co., manufacturer of the Monroe car, expects to build a new factory in the spring, which will permit a production of 10,000 cars. The Stutz Motor Car Co. will double its production, and the Premier, under its new direction, will build between 4000 and 5000 cars.

The foregoing is merely an example of how production is being increased in one city. Similar activity is to be found in most of the other large manufacturing centers throughout the United States. It will thus be seen that the recent appeal of the Council of National Defense for increased production is already being met by the automobile industry.

---

THAT CONSERVATION must be practiced to avoid a shortage of gasoline and oil within a very few years, is emphasized by Van H. Manning, director of the Bureau of Mines, Department of Interior, who says in part:—

"There are no known commercial substitutes for gasoline or lubricating oils. The domestic output of these does not meet the present consumption. Of the original available petroleum supplies under ground, we have consumed 40 per cent.

"It is true that there are vast oil resources in foreign countries which can probably meet demands for the next 10 years. Predictions beyond that period are not safe. Our efforts must be turned toward obtaining perfection in processes and mechanical equipment. In 1918 the value of the output of crude oil and refined products in the United States was $2,500,000,000, and certainly the petroleum industry can afford to spend more than has been spent heretofore in research to discover new methods and perfect those now in use to make the recovery of oil and its utilization more efficient."

# A Woman's Reason

Women also, like the Columbia Six.

They like it because it is really a handsome car—beautiful in lines, finish and in those niceties of equipment and furnishings which mean so much to the feminine mind.

They enjoy having their car admired—enjoy the ease with which it is handled and the supreme riding comfort accomplished by the non-synchronizing spring suspension.

Because women, in so many cases, have the final word in the purchase of a car—Columbia dealers find the warm friendship between women and the Columbia Six a big sales asset.

The Columbia Motors Company is always glad to talk to capable dealers.

BROWN-LIPE
GEAR
TRANSMISSIONS

# Exaggerated?—Yes

But a gear that is heated and suddenly quenched **will warp**—unless special pains are taken to prevent it.

Brown-Lipe Gears are quenched in a special machine that holds them **absolutely true** under great pressure.

This directly affects the car- or truck-owner. It increases the dependability of his gears.

**BROWN-LIPE-CHAPIN CO.**
DIFFERENTIALS

**BROWN-LIPE GEAR CO.**
TRANSMISSIONS

**Both at SYRACUSE, N. Y.**

# Westinghouse

STARTING, LIGHTING & IGNITION EQUIPMENT

W WESTINGHOUSE ELECTRIC

## Proof of Pre-Eminence

**Forty-three leading makes of motor cars carry Westinghouse Equipment though it costs more.**

Check up the row of high grade cars parked at Chevy Chase, Brae Burn, Nassau Country Club—at these or other clubs where quality is characteristic—and you'll discover that Westinghouse Equipment is found oftener in the *finest* makes of cars than any other. Also that the greater a car's *reputation for quality*, the greater the likelihood that it is Westinghouse Equipped.

Go where you will—in the clubs of Greater New York's countryside, around Boston, Washington, Philadelphia or San Francisco—the result is always the same.

That such cars as Pierce-Arrow, Locomobile, Revere, Dorris, Cunningham, Mercer, McFarlan, Porter and others as well known use Westinghouse Equipment, is indisputable proof of its pre-eminence.

WESTINGHOUSE ELECTRIC & MANUFACTURING CO.
*Automobile Equipment Department*
*General Sales Office*, New York City: 110-114 W. 42nd Street
*Branch Sales Offices*, Cleveland, Ohio: 1900 Euclid Building.
Indianapolis, Ind.: City Trust Bldg.
Detroit, Mich.: Kresge Bldg. Chicago, Ill.: Conway Bldg.

# PIERCE GOVERNORS

## Just as Important as Steel Springs or Rubber Tires

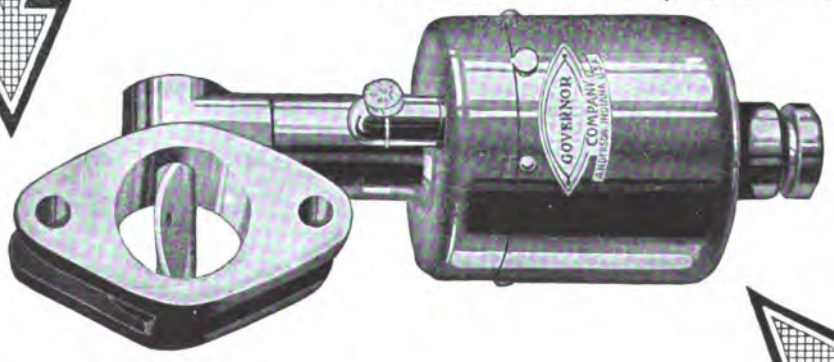
The purpose of springs, rubber tires and governors is to avoid vibration — the most destructive element known in mechanics.

Fast driving of trucks, with their stiff springs and solid tires, is just as disastrous as driving at the proper speed without springs or tires. Furthermore, speeding is the cause of 76 per cent of all truck accidents.

Pierce Governors positively stop this abuse, increasing the life and efficiency of any truck and cutting maintenance costs in half.

That's only ONE of the reasons why 93 truck manufacturers have made Pierce Governors standard equipment.

## The Pierce Governor Company
## Anderson, Indiana



*World's Largest Governor Builders*

### Bearings Company of America to Build New Factory

At a recent meeting of the Board of Directors of The Bearings Company of America, Lancaster, Pa., it was decided to increase the thrust bearing factory facilities of the company. A new building of the latest type of construction is to be erected in the immediate future, which will give approximately 60,000 additional square feet floor space when it is completed.

### Outlook Co. Establishes New York Office

The Outlook Co., Cleveland, Ohio, has established a sales office at 250 West 54th Street, New York City. This will be known as the eastern and export sales branch, and will take charge of all business in the New England states and in the eastern and southern states as far as Tennessee. It will also look after the company's growing export business throughout the world.

### Radoye Made Director of Haynes

Gilbert U. Radoye has been made director of advertising of the Haynes Automobile Co., Kokomo, Ind. Mr. Radoye for the past year, in the capacity of advertising manager, conducted the successful world-wide advertising campaign to merchandise Haynes cars. This advertising program was the biggest every attempted during the twenty-six years' history of the Haynes company.

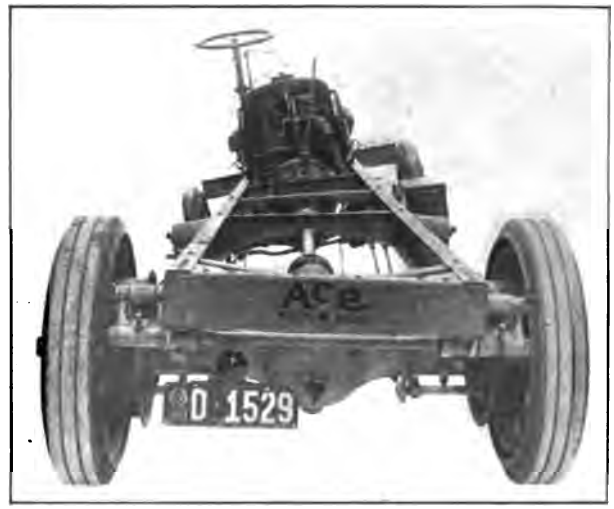
### H. F. Carter Appointed Manager of Buick Chicago Branch

Horace F. Carter has been appointed Chicago branch manager of the Buick Motor Co., succeeding D. A. Burke, who has accepted a higher executive position in another division of the General Motors Corp.

### 1½ and 2½-Ton Ace Trucks

Ace trucks are being manufactured in two models by the American Motor Truck Co., Newark, Ohio. These are of 1½ and 2½ tons capacity, and

embody up-to-date design throughout. They are being marketed completely equipped with all-weather steel cabs, electric starting and lighting systems, odometers and trailer connections. The trucks are made up of standard units, including Buda engines, Brown-Lipe clutches and gearsets, and Stan-Par worm drive rear axles. The engine of the smaller model has a bore of 3¾ inches on a stroke of 5⅛ inches, and is of the L-head type with the cylinders cast in block. Three-point suspension is used, the rear engine supports resting on complete universal joints protecting the engine legs against breakage. A force feed oiling system is used and water is circulated by the thermo-syphon system. Ignition is furnished by an Exide battery, Atwater-Kent distributor and Westinghouse generator. The starter is also Westinghouse, and is connected to the engine through the Burdix system of drive. About 30 horsepower is developed at a



governed speed of 1200 r. p. m. The engine of the larger truck is similar to that of the smaller model, except that the cylinder dimensions are 4¼ x 5½ inches and cooling is by centrifugal pump circulation. This engine develops 36 horsepower at a governed speed of 1100 r. p. m. The transmission is placed amidships in the larger truck, instead of being in a unit with the engine. The smaller truck has a wheelbase of 144 inches, and is provided with 34 x 3½-inch solid tires in front and 36 x 7-inch solid in the rear.

Rapid service by means of the unit replacement system is to be furnished by the company. Instead of laying up a truck for repairs, any unit will be replaced by a new one of the same kind, which will be furnished at a fixed price at service stations.

### New Plant for Stevens-Duryea

Stevens-Duryea Co., Chicopee Falls, Mass., has purchased from B. Haarmann Company 43 acres of land in Willimansett, known as the Willimansett Driving Park, Springfield, Mass. The management of the company states that it will immediately let a contract for a thoroughly modern motorcar plant of the single story saw-tooth roof type construction that will have a floor space of approximately 15 acres, to be built on this property. Work is to begin at once and the contract stipulates that the plant must be ready for occupancy by Jan. 1.

The present plant at Chicopee Falls will be occupied to capacity and it is not planned at this time to move any part of the Chicopee Falls plant to Willimansett. The company is at present producing Stevens-Duryea cars, which it is stated are of the same high character and quality as formerly produced by the old company, which discontinued manufacturing new cars in January, 1915. The combined plants will produce 2500 cars per year, and will employ approximately 1000 men. The new models will be exhibited at the New York and Chicago shows in January.

and investment house of Cleveland, will be
urer, and Norman Elliott of the former Con-
ated Top Co., treasurer.
e product of the General Top Co. is known
e Artcraft top. It is said to be altogether
e the common car top, and, although having
of the advantages offered by "closed body"
ruction, it is different in many particulars.

### Changes in Dearborn Truck Organization

e Dearborn Truck Co. announces that George
ailey, general manager, will assume the active
management of the business.
e increase in Dearborn business since the an-
cement of their two-ton worm-driven Model
truck, has made it necessary also to divide the
try territorially.
O. Nerad, who since his return from service
eas has been service manager for the com-
, has been appointed sales manager of all the
tory west of the Mississippi river. L. W. Coul-
advertising manager, has been appointed sales
ager of the territory east of the Mississippi
.
arles E. Salter, well known throughout the
rn part of the United States for his long con-
ons with the Dearborn Truck Co., has been
inted export manager, and R. J. Macdonald,
er head of the Macdonald Motor Co. of At-
, Georgia, has been appointed southern sales
esentative. F. G. Bailey, in assuming charge
ales, relinquishes his duties as purchasing
t, which has been assumed by C. B. Blair.

### nerman Becomes President of Supreme Motors

bert H. Zimmerman, who for 14 years has
ted the destinies of the Continental Motor Co.
etroit, has severed his connection with that
oration and has associated himself with the
eme Motors Co. of Warren, O., in the capacity
ice-president, treasurer and general manager.

### Albertson & Co. Bring Out New Booklet

he A-B-C of Ford Motor Repairing" is the
of a booklet brought out by Albertson & Co.,
k City, Ia. The booklet tells how to regrind,
e and reseat the valves and seats of the Ford
e.

### Indiana Tractor Is Ready

The Indiana Silo and Tractor Co., Anderson, Ind., has reached quantity production at the factory at Findlay, Ohio, and is making distributor connections for the purpose of covering the entire country with an aggressive campaign during the coming year on Indiana tractors.

The following distributer connections recently have been made: Indiana Tractor Co., Los Angeles, Cal.; Southeast Indiana Tractor Co., Atlanta, Ga.; Fulton Motor Truck & Service Co., Baltimore, Md.; Tractor Distributing Co., Albany, N. Y., and Richardson Manufacturing Co., Worcester, Mass.

### Winther Will Build Milwaukee Plant

The Winther Motor Truck Co., Kenosha, Wis., has made public the fact that it has signed an option for a site in Milwaukee, upon which it expects to erect a new plant costing $250,000. The present large factory in Kenosha will be continued in full operation and general officers will remain in Kenosha.

### U. S. L. Convention

The accompanying photograph was taken recently at Niagara Falls, New York, and shows the majority of the central service station representatives of the U. S. L. Storage Battery Co.

During the convention a unique contest was held,

SERVICE STATION REPRESENTATIVES AT U. S. L. CONVENTION

with five prizes, consisting of trips by aeroplane over Niagara Falls, the gorge and rapids.

The meeting adjourned with a banquet at the Clifton Hotel on the Canadian side of the Falls.

### Body Company Sold

The Bennett-Sustrich Co., Detroit, has purchased the body manufacturing business of the Southwick-Pom Co., and will continue it. James J. Bennett, who formerly was superintendent of the Southwick-Pom Co., is president of the new organization, with James S. Southwick as treasurer.

### Will Make Automobile Parts

The Machine Specialty Co., Ann Arbor, Mich., which recently increased its capital stock from $10,000 to $135,000, and which has increased its production facilities, will also expand its field of activities and become a manufacturer of automobile parts. The company, it is said, will specialize in piston pins.

### Racine Starts Housing Development

Two hundred modern houses will be built by the Racine Rubber Co. for the employes of its factories at Racine, Wisconsin.

# TRADE GOSSIP

Arthur J. Slade, consulting engineer on motor transportation, has resumed his practice at 1790 Broadway, New York City, after serving two years in the army as lieutenant-colonel, organizing and directing the engineering division of the Motor Transport Corps.

---

Joseph E. Otis, vice-president of the Central Trust Co. of Illinois, has been elected a director of the Stewart-Warner Speedometer Corp., Chicago.

---

J. Fletcher Farrell was elected a director of the Briscoe Motor Corp., Jackson, Mich., at a meeting of the board of directors.

---

Russell Munroe has resigned as assistant advertising manager of the Ford Motor Co., to become assistant sales manager of the newly-organized Ford Motor Co. branch in Paris, France. Munroe has been with the Ford organization for several years.

---

Alwin A. Gloetzner, formerly vice-president in charge of sales and engineering of the Covert Gear Co., Inc., Lockport, N. Y., has been appointed president and general manager of the company, succeeding P. A. Clum.

---

Dr. George C. Barlow has resigned as president of the U. S. Tractor Co., Menasha, Wis., because of ill health, and is succeeded by Joseph G. Sailor, whose place as vice-president is filled by E. M. McGillan, mayor of Menasha.

---

Theodore T. Lane, until recently a lieutenant in the United States Air Service, has been appointed director of purchases for Briscoe & Stahl, Detroit, American representative of Bollanger Freres.

---

Hi Sibley, for two years a member of the Packard Motor Car Co.'s advertising staff, has resigned and will make his home in California.

---

W. Carl Parker has been appointed to the managership of the Lansing branch of the Reo Motor Car Co., Lansing, Mich., to succeed Clarence Triphagen, who recently assumed the position of manager of the newly-established Reo Detroit branch.

---

Walter K. Towers, who until a short time ago served with the A. E. F. as publicity director for Europe for the United War Work campaign and later with the Motor Transport Corp., has succeeded W. Carl Parker at the Reo Motor Car Co., Lansing, Mich.

The Goodyear Tire & Rubber Co., Akron, Ohio, has appointed A. F. Osterloh, secretary of the company, vice-president and general manager of the Goodyear Tire & Rubber Co. of California.

---

Floyd Smith has been appointed manager of purchases of the Pierce-Arrow Motor Car Co., Cleveland, and Otto Utz, assistant manager. Smith was formerly assistant purchasing agent of the Maxwell Motor Co. and later director of purchases of the Wright-Martin Aircraft Corp.

---

Frank Kane, for three years with the advertising department of the Packard Motor Car Co., has joined the staff of Erwin & Wasey, advertising agents, Chicago.

---

Jay V. Hall, formerly general sales manager of the Olds Motor Works, who resigned that position some time ago, is now with the new Willys Corp. and is located at the Duesenberg plant, where he is in charge.

---

V. L. Curran has resigned as purchasing agent of the Sparks-Withington Co., Jackson, Mich., and has acquired an interest in the Jackson Screw Products Co.

---

Victor Greiff, a lieutenant in the Bureau of Steam Engineering, Naval Reserve Force, has been appointed research engineer for the American Bosch Magneto Corp., Springfield, Mass. His previous connections have been with the Covic Electrical Co., the New York Edison Co. and the General Electric Co.

---

Harry J. Lindsley, who has been western sales manager for the past seven years for the Bound Brook Oil-less Bearing Co., Bound Brook, N. J., and William F. Jennings, eastern sales manager for the company for the past five years, have been made vice-presidents of the concern.

---

A. L. Tisch, advertising manager of the Paige-Detroit Motor Car Co., Detroit, for six years, has resigned. He is going into the retail business, and has made connections with the Robb Motor Car Co., Chicago, in an executive capacity.

---

Parke Ross, who has been in charge of sales for the Elgin Motor Car Corp., Argo, Illinois, for more than a year, will hereafter be connected with the Dupont Motor Manufacturing Corp., Wilmington. Mr. Ross will be treasurer of the company and will also have direct supervision of sales.

# MANUFACTURERS' NOTES

The Automotive Corp., Toledo, has purchased a site and will build a factory at once for the manufacture of farm tractors. The company plans to begin work on a building, 90 x 300 ft., shortly. Officers of the company are: President, A. H. Wyatt; vice-president, George G. King; secretary and treasurer, William Hulin.

---

Henry Ford & Son have purchased the factory of the Dunbar Manufacturing Co. at Northville, Mich., and will convert it into a plant for the making of tractor parts.

---

The Briggs & Stratton Co., Milwaukee, Wis., manufacturers of ignition specialties and automotive equipment, are breaking ground for a five-story manufacturing addition, L-shaped, 62 x 172 and 62 x 155 ft., at Teutonia Avenue and Center Street, which will increase the capacity more than 100 per cent.

---

The Brown Auto Carriage Co., Cleveland, has been reorganized as the Brown Body Corp., with a capitalization of $1,000,000, for the exclusive manufacture of automobile bodies. A 3½-acre site has been purchased. Work will start immediately upon the first unit of a plant costing approximately $500,000, the units to contain a total floor space of 200,000 square feet.

---

A building is being constructed for the International India Rubber Corp., South Bend, Ind., for storage purposes. Plans are also nearly completed for a factory building which will increase the capacity from 500 tires a day to a daily capacity of more than 1000 tires and tubes.

---

The Reliance Wheel Co. will erect a new factory at Youngstown, Ohio, on a tract of land recently purchased, which is on the main line of the Erie and New York Central lines. The company makes double disk wheels for automobiles, trucks and airplanes.

---

The Oshkosh Motor Truck Co., Oshkosh, Wis., has purchased a site at High and Forest Streets for its proposed new works, the first unit of which will be 150 x 300 ft.

---

The general offices of the Black & Decker Mfg. Co., Baltimore, Md., have been moved from 105 South Calvert St. to Towson Heights.

The offices of the Service Motor Truck Co. of Wabash, Ind., have been moved from the building which they have occupied for the last ten years into a new brick and reinforced concrete administration building three stories high, which has just been completed at a cost of $150,000.

---

The Beverly Co., Louisville, Ky., has become Kentucky distributor for the Rubber Products Co.

---

The C. A. Finch Lumber Co., which operates many yards and retail establishments through North and South Dakota, has taken the Rubber Products Co.'s line for distribution in that territory.

---

The Stronghold Tire Co., Pittsburgh, has taken over the Rubber Products Co.'s line for western Pennsylvania.

---

The Sumner Iron Works, Everett, Wash., makers of logging, lumbering and highway construction equipment on the Pacific Coast, is planning to add a complete tractor factory to the plant and expect to arrange with the Topp-Stewart Tractor Co. of Clintonville, Wis., for the right to build the Topp-Stewart, a four-wheel-drive design, on a royalty basis. Meantime the Sumner company is the exclusive distributer for the Topp-Stewart concern in the coast territory.

---

The J. W. Murray Manufacturing Co. of Detroit, a $3,000,000 corporation making automobile sheet metal products, soon will open a branch factory in Cleveland.

---

Work has been started on a new $100,000 plant for the Lewis Steel Products Co., Toledo, Ohio, valve manufacturer, on a site just purchased between Clifford and Adrian Streets on lower Summit Street. The main buildings will consist of a foundry, 80 x 300 feet; a machine shop of the same dimensions, and a two-story office building. The plant is expected to be completed by January 1. The present plant at 4080 Detroit Avenue will be abandoned as soon as the new factory is completed.

---

H. J. Boudreux and Joseph H. Loeb, both of Morgan City, La., have established a small manufacturing plant for the construction of a patented automobile wheel to do away with pneumatic tires. Steel springs are used on the spokes, which are set at a tangent.

### Lafayette Motors Co. Organized

The Lafayette Motors Co. of Indianapolis, headed by Charles W. Nash, D. McCall White and E. C. Howard, all prominent figures in motor car design and manufacturing, is the latest important factor to enter the automobile market.

It has been known for several weeks that D. McCall White and E. C. Howard were preparing to manufacture a high-grade car of Mr. White's design in a plant which they recently purchased in Indianapolis, and much interest has been displayed regarding the name and personnel of the organization. The articles of incorporation, just fiied, have answered both questions, and give the capitalization of the company as $6,000,000.

The basic organization is complete. Charles W. Nash, president of the Nash Motors Co., Kenosha, Wis., is president; D. McCall White and E. C. Howard are vice-presidents, in active charge, and James J. Storrow of Boston will act as chairman of the board of directors.

Mr. Howard was formerly general sales manager of the Cadillac Motor Car Co. in Detroit. Mr. White is perhaps best known for his successes as designer of the English Daimler and Napier engines and the Cadillac eight in this country. Until recently he was vice-president of the Cadillac company.

The car will have many advanced features, and it is the present intention of the company eventually to produce all the chassis units in the Lafayette plant. It is predicted that a Lafayette car will be displayed during the national shows in January. Officials of the company hope to be able to produce cars in quantity early next summer.

### Robert A. Shearer Dies Suddenly

Mr. Robert A. Shearer, traveling representative of N. A. Petry Co., Inc., of Philadelphia, died suddenly of heart failure on the train on his way north from Alabama. He was buried with Masonic rites from his home at Berryville, Va. Mr. Shearer's genial presence and charming personality will be greatly missed by his company and his many business friends.

### Changes in Firestone Personnel

Several changes have taken place in the personnel of the Firestone Tire & Rubber Co., Akron, Ohio. The company has enlarged its Newark, N. J., force by the addition of G. C. Buchanon as solid tire salesman and C. A. Woodruff as pneumatic tire salesman. C. D Hague has been appointed special giant pneumatic salesman for the Cleveland branch Aubrey H. Boyce and George A. Knerr at Buffalo on solids. G. W. Buck, formerly of the Grand Rapids branch, has been rewarded by an appointment to travel Oakland, Genesee and Lapeer counties, Michigan. Two New England appointments have also been made. George M. Powell has been created territory salesman out of Springfield, and Hilding W. Nelson has been assigned to pneumatic sales in Hartford territory.

W. H. Knapp has joined the organization, covering Calhoun, Jackson and Washtenow counties, Michigan. A. B. Storey, until recently on the force of the Grand Rapids branch, is taking over the territory in Van Buren, Cass, St. Joseph, Kalamazoo and Allegan counties, Michigan.

### No New Packard Model

The Packard Motor Car Co., Detroit, announces that its production for the calendar year of 1920 will more than double that for the year of 1919.

While there may be some minor changes in seating arrangements, there will be no so-called 1920 models. This is in line with the Packard policy of adhering to certain principles of engine and body design. The engine of the present Packard Twin Six is practically identical with the first one which was produced, April 1, 1916.

### Boyce Buys Erwin Patent

Negotiations have recently been completed whereby Harrison H. Boyce of the Moto-Meter Co., Inc., Long Island City, N. Y., becomes sole owner of the fundamental Erwin Patent, recognized in the fire extinguisher field as basically covering automatic means of extinguishing fires under the engine hood of passenger cars, trucks and tractors.

It is reported that Mr. Boyce is contemplating forming a new company for the exploitation of this invention.

### Kenworthy to Be President of New Motor Corporation

C. Y. Kenworthy, having sold his interest, has resigned as vice-president and general manager of the Roamer Car Company, and has accepted the presidency of the Kenworthy Motors Corporation, which is being organized under the laws of the State of Illinois. Men prominent in the industrial and financial world are associated with Mr. Kenworthy, who is to be president and general manager of the company.

### East Palestine Rubber Elects Officers

At the adjourned annual meeting of the stockholders of The East Palestine Rubber Company, held at the office of the company at East Palestine, Ohio, recently, an entire new board of directors consisting of C. F. Adamson, J. F. Stoddard, J. H. Whittenberger, Wm. G. Morris, C. F. Woods, S. B. McClure and P. H. Murphy, all East Palestine business men, was elected.

The board of directors organized by the election of C. F. Adamson, president and treasurer; S. B. McClure, vice-president; J. F. Stoddard, secretary.

The company's new plant, which has been standing idle for the past two years, will be put in immediate operation.

### Puritan Buys Elgin Tractor Service

The Puritan Machine Co., Lafayette, Blvd., at Tenth Street, Detroit, announces the purchase of the service repair business of the Elgin Tractor Co. of Piqua, O.

All service repair parts, tools, blue prints, jigs, dies, etc., needed in the continuation of service to Elgin tractor owners are being moved to the Detroit plant of the Puritan Machine Co., from which point Elgin tractor owners will be able to secure service repair parts in the future.

### Eveready Plans Big Christmas Sales

The American Eveready Works of Long Island City, N. Y., will conclude this year's program of sales drives by staging next month a campaign to boost the Daylo flashlight as the ideal Christmas gift.

# FYRAC

## *SPARK PLUGS*

## *Durable*

To the dealer, the durability and saleability of a spark plug are the two important considerations.

Durability guarantees satisfied customers, which means more business. Every Fyrac spark plug is carefully tested for quality of materials and construction before shipment. They are durable. Fyrac's saleability and turnover is guaranteed by the National advertising, and Fyrac's "*one inch of firing surface*" makes them mechanically efficient.

*Order from your jobber*

# This Welded 2-inch Pipe Stopped a Flood-Driven Barge

## —*And Never Sprung a Leak!*

**TO MEET a temporary situation, the load from a 6-inch high pressure gas main was put through this welded 2-inch pipe line, laid on temporary piling across a river.**

**Floods came, washed away the false structure of a new bridge, tore a barge loose from its moorings and hurled the entire mass down on this slender 2-inch pipe.**

**It held them all. Not a single leak developed.**

**Wherever strength, permanence and tightness are essential you will find joints are being *welded*—joined together "for keeps", using**

**Prest-O-Lite**
**DISSOLVED ACETYLENE**

**Nation-wide Prest-O-Lite Service brings straight to the user's hands a single cylinder of highest temperature gas—or hundreds of them.**

**Forty plants and warehouses insure Prest-O-Lite users prompt and adequate service; wherever located, there is an efficient Prest-O-lite *producing* plant near.**

1219

**THE PREST-O-LITE COMPANY, Inc., General Offices: 30 East 42nd Street, New York**
***Kohl Building, San Francisco***

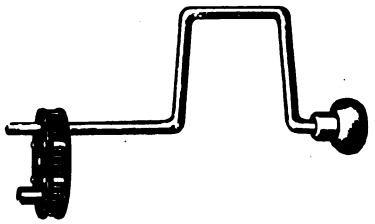
### Parker Metal Punch

improved sheet metal punch has just been ht out by the Parker Supply Co., 785 East Street, New York City. A feature of this is the combined front pointer and side gage, eliminates the necessity for center punching

istering the center of the punch by looking ıe throat. The side gage also acts as a wrench e removal of punches and as a screwdriver e replacing of disc. The punch is known as OX, and is made of forged steel, heat treated, he working parts hardened and tempered. length overall is 8 in., weight, 2⅝ lbs., and pth of the throat to the center of the punch in. Standard size dies are made ranging ⅛ in. to 17-64 in., claimed to punch holes in ;e steel.

### Universal Offset Wrench

bolt holding the fourth cylinder connecting aring of the Ford car is very difficult to reach n ordinary wrench. Realizing this, the Saw-les Co., Lincoln, Neb., has brought out the ·sal offset speed wrench, which is especially ed for this purpose.



offset is 4¾ inches long, having a 3-inch dis-between the socket and the brace rod. This ample distance to place the wrench in the case and have the socket fit up directly on t of the fourth connecting rod of the crank-

brace is one-half inch steel rod, with a 10-wing, thereby giving sufficient leverage to e the very tightest nuts.
wrench is 17 inches over all and weighs four 3.

### Hart's Locking Device

The accompanying illustration shows Hart's locking device for Ford cars installed on the gas and spark levels, locking them in a retarded position. The design of the locking device combines

simplicity and efficiency so that it can be sold at a modern price.

The device, which is being placed on the market by Hart & Co., 3 Appleton Street, Boston, Mass., is made of heavy, cold, rolled steel and is so adjusted to the steering column that its removal by a thief by means of cutting, sawing or filing is not possible because the length of time required to do so would cause his detection.

The locks are heavily nickel-plated and are packed in attractive boxes (containing twenty-four devices in separate cartons) for counter display. Padlocks are supplied by the company when desired.

### New Am-Pe-Co. Cutout

The "New Am-Pe-Co." muffler cutout for Ford cars is being placed on the market by the American Machine Products Co., Marshalltown, Ia. This cutout is simple in design, embodying but three

principle castings securely assembled. The edges of the valve seat are beveled so as to secure a tight seat when the valve is closed. Instead of a large spring, small high tension springs are used to close the valve. A pedal consisting of two parts working on a fulcrum is supplied with the outfit. Sizes range from 1½ x 2 in. to 2¼ x 2¼ in.

### Auto Spark Light Cigar Lighter

The Auto Spark Light cigar lighter is being placed on the market by the J. C. McAdams Sales Co., 51 East 42nd St., New York City. The lighter operates by igniting a gasoline soaked wick from a spark taken from one of the spark plug circuits of

the engine. When the tube with its gasoline saturated wick is placed in the opening of the lighter, a fine, hot spark is produced between the terminal points—lighting the wick. This, of course, does not stop the action of the spark plug with which the lighter is wired, as it is simply like introducing a spark gap. The lighter is attached to the instrument board and a wire which originally ran to one of the spark plugs is attached to one terminal of the lighter. Another wire is then run from the other terminal of the lighter to the spark plug. This lighter presents an attractive appearance when attached to the instrument board.

---

### Bilt-Wood Wheels

Bilt-Wood wheels are made in disk form of multiply veneered wood. Flexibility and durability are combined in these wheels, according to the New

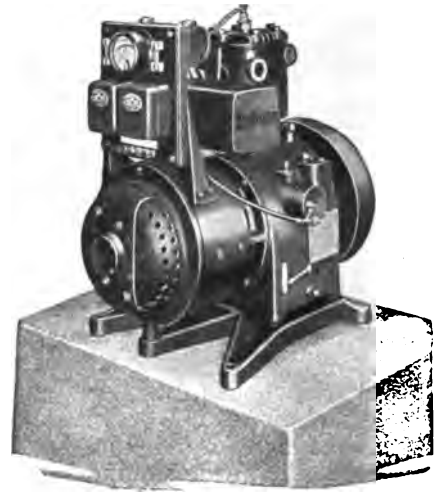
York Veneer Products Co., 2844 Woolsworth Bldg., New York City, the manufacturer.

They can be installed on any motor-propelled vehicle, without changing the Standard equipment of the hubs, brake-drums, bearings, rims, demountables, tires and "spare" equipment and without affecting the production or assembly facilities of the automobile or accessories manufacturers. They are as readily applicable to old cars already in service as to new cars under construction in the factory.

### Perfection Direct Connected Light Plant

A new direct connected unit light and power plant has just been brought out by the Perfection Storage Battery Co., Chicago, Ill. It is intended for farm homes and isolated plant work. A 3-horsepower engine is used which has a bore and stroke of 3¼ inches, and a normal speed of 1150 r. p. m. The engine turns a 1200-Watt generator, which is directly connected to the crankshaft. The switchboard is bolted to the top of the generator and is made of slate. Perfection sealed plate batteries are used.

Closing starting switch starts the engine electrically. When the generator gets up to speed, the battery charges automatically. Opening switch stops the engine. High starting torque enables the engine to be cranked electrically while battery is in



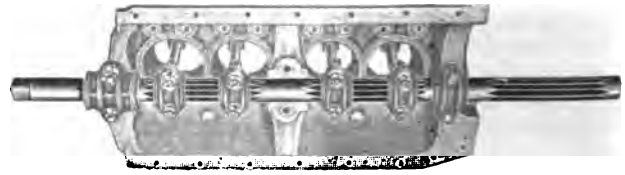
low state of charge. An automatic electric stop positively stops the engine when the battery is fully charged; also stops it if the battery is charged at a high, injurious rate.

In case the battery is discharged too low to crank the engine electrically, the battery spark is available so the engine can be cranked by hand. The engine will charge the battery and supply current for lighting and motors, and deliver belt power at same time.

---

### Lewis Combination Reamer

The Lewis combination reamer is being placed on the market by the Lewis Tool Co., 915 Washington Avenue, Minneapolis, Minn. This reamer is designed to ream the connecting rod and main bearings of the Ford car, and it is stated that the work can be done in one and a half hours, as compared with eight hours by hand. A skilled mechanic is



not required to operate the device and a better and more lasting job is obtained, it is stated. Special sizes for use on other makes of cars can be furnished to order by the company.

Digitized by Google

### Bradney Jack Screw

The chief feature of the Bradney jack screw, which is being placed on the market by the Bradney Machine Co., Inc., Middletown, N. Y., is that the supporting ram does not revolve. This eliminates the necessity of a swiveled cap, which, it is stated, is a constant source of trouble and wear.

This ram moves up and down in a square space extending to one inch below the top, leaving nothing to wear but steel case-hardened nut.

The load moves constantly upward and away from the operating lever, thus preventing possible injury to the hands, sometimes caused by the load following the operating lever and collapsing.

Another feature of this device is that the ram cannot possibly be raised out of the body while lifting a load, but when necessary the ram can be removed by taking out a locking pin placed there for that purpose.

The standard sizes of these jack screws range from 5 to 30 tons.

### Marathon Mats

Marathon mats, manufactured by the Marathon Tire & Rubber Co., Cuyahoga Falls, when placed on the running-board in front of each door prevent mud, dirt, and grease from being tracked into the car and ruining the floor carpet. They also prevent unsightly holes being worn in the running-board.

A small accelerator mat is also offered by this company, which covers holes made in the floor covering by the heel, and insures a non-slipping rest for the heel.

### Marathon Cord and Fabric Tires

A special feature of both the Marathon cord and fabric tires made by the Marathon Tire & Rubber Co., Cuyahoga Falls, Ohio, is that the same tough, wear-resisting stock which is used in the tread is

extended down over the side walls to the bead. This prevents chafing and scuffing off of the side walls when the tire is driven over rough, rutty, or frozen roads. Consequently, sand and water cannot get into the carcass and ruin it, it is stated.

### Genco Distilled Water Bottle

The Genco distilled water bottle and storage battery filler is made of glass, holds a half-gallon of water, and has a dial on top to show last date battery was filled; while through the fiber cap, and down into the bottle, is a Hydrometer Syringe,

which is used for transferring the water from bottle to storage battery cells, and testing the strength of the solution.

The old method of filling storage cells with distilled water, by pouring the water through a funnel, subjects the water to contamination from two sources: First, through contact with a metal funnel; second, through contact with dirt, dust and grease that have accumulated in the funnel.

With the Genco arrangement, the water comes in contact with no metal, and it is impossible for dirt, dust or grease to be injected into the cells.

The outfit is made by the General Scientific Equipment Co., 2718 West Lehigh Ave., Philadelphia, Pa.

THE ELECTRIC STORAGE BATTERY CO.

# "Exide" Starting & Lighting Battery

## *The Battery with the Trade-mark that means something*

All over the country the "Exide" battery is known as the "Giant that Lives in a Box."

This title has been earned by this battery's sturdy dependable performance in the automobiles of thousands upon thousands of motorists, practically ever since the first electrical starter was put on a car.

"Exide" is the battery that experienced motorists *want*, because they know it is the battery that is *right* in every inch and detail.

It is the battery that experienced dealers like to *sell*, because they know it is the battery that makes satisfied and enthusiastic customers.

## Dependable Priming Plugs

## Equip Your Engine So It Sure-Fires When Cold

CHAMPION Dependable Priming Plugs sure-fire cold motors because, with the priming cup right in the plug, the gasoline trickles down the core of the plug and drips from the sparking point where the spark jumps and is the hottest.

They are imperative in cold weather for the hundreds of thousands of cars that do not have priming cups, and are infinitely better for those that do, because priming cups let the gas in too far from the spark plug. Every car can be easily equipped with these plugs in a few minutes.

Now is the time for dealers to order.

**Champion Spark Plug Company, Toledo, Ohio**

# EVEREADY
# Christmas Tree Outfits

WHAT a Christmas this will be! Every family is going to blow itself to a good old-fashioned Christmas this year and celebrate the coming of peace, the return of their boys and the prosperity of the times.

This means a big market for Christmas Tree Lighting Outfits. Each year more and more people are learning the lesson of fire prevention and discard candles in favor of the safe electric lighting outfits.

When you stock the Eveready Outfits, you cash in on the national reputation of a widely known manufacturer, and on the confidence of the public in Eveready products and on the tremendous advertising of Eveready Daylo, Tungsten Batteries, Storage Batteries, etc.

Eveready Christmas Tree Outfits are made up of MAZDA lamps exclusively. They consist of 8, 15, 24, or 32 lights of assorted colors, with 8 foot leads, green composition sockets, porcelain junction boxes, and Benjamin attachment plugs.

Supplied with mercerized cotton or silk covered wires; different styles for use on 110 volt and 32 volt lighting circuits, or with dry cell or storage batteries.

Ask us for illustrated price list.

# Ward Leonard

# Universal Rheostat

**(Fool-proof, Type URK)**

# Protects Batteries and Circuit

This rheostat is a standard Ward Leonard Universal Rheostat with an interlocking overload and underload release circuit breaking as a part of it.

The overload circuit breaker protects the rheostat, battery and the entire circuit against excessive current. The underload circuit breaker prevents the battery from discharging back into the line.

The rheostat lever and the circuit breaker are so interlocked that when the circuit breaker is open it is necessary to move the rheostat to the position of minimum charging rate in order to close the circuit. The circuit breaker is entirely enclosed, so that it cannot be tampered with by the operator.

This overload circuit breaker will not open at any current less than the maximum charging rate of the rheostat.

Made in four capacities for charging current of ten, twenty, forty and sixty amperes. Also made for use with low voltage (30 to 60 volts) generators or supply. Ask for Bulletin H.

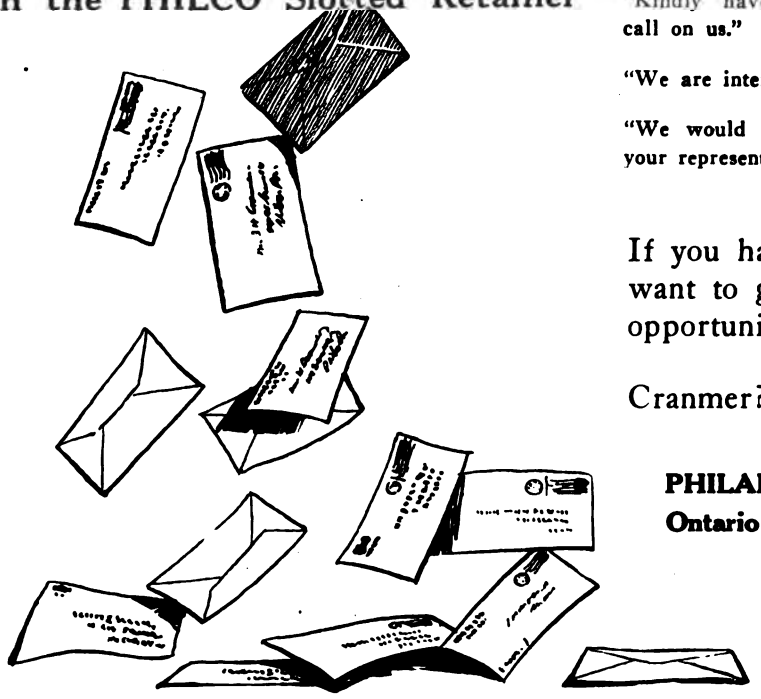
# SOME LETTERS That Cranmer Gets

THE NEW

**PHILADELPHIA DIAMOND GRID BATTERY**

With the PHILCO Slotted Retainer



EVER since the "Cord Tire" battery was first announced, Cranmer has been besieged with letters from dealers.

We quote here merely a few of them, but they are enough to show, perhaps, how thoroughly worth while our proposition to dealers is.

## Read Them

"Your proposition looks very good and will be pleased to have your salesman call to give us the final information wanted."

"Send that salesman along. I want to talk with him."

"Kindly have your salesman call on us."

"We are interested."

"We would be glad to have your representative call on us."

"Send us your distributors' contract on Diamond Grid Batteries."

"Please let us have your latest price list for agency in this district."

"The first time your salesman is in this territory, please have him call."

"Would like to inquire if you have a representative in this part of the country."

"We will be pleased to have your salesman call."

"Have your salesman call."

If you haven't heard from Cranmer, and you want to get in touch with the biggest battery opportunity on the boards—drop him a line.

Cranmer? Oh, he's the sales manager for

# An Ideal Battery Charger for Alternating Current

The 6-amp., 75 volt Tungar Rectifier will charge any combination of 3, 4, 5, 6 up to 30 cells at 6 or 7 amperes or less from alternating current.

It is a practical device demonstrated by actual service. It equips the garage for efficient battery charging at a much lower cost than any other reliable device of similar capacity. The Tungar Rectifier allows a good profit on battery charging.

The Tungar fastens to the wall thus taking up no floor space. It uses alternating current at a cost of but six cents an hour for ten 3-cell batteries. It is self-starting, requiring no attendant.

Fool proof, trouble proof and simple to operate, the Tungar Rectifier charges all sizes of storage batteries up to thirty cells.

# A Double Service for Motorists and Garagemen at these Branches

Every Branch and Authorized Distributor of United Motor Service Inc. performs a double function—the distribution of genuine service parts and the making of necessary repairs and adjustments.

The complete stocks of parts carried in every Branch, and by our Authorized Distributors have been passed by the manufacturers of Delco, Klaxon and Remy electrical equipments. They are *genuine* in every sense of the word.

The service rendered in the form of repairs and adjustments is given by men trained in the factories of the Dayton Engineering Laboratories Co., the Remy Electric Company, and the Klaxon Company.

And you are accorded a prompt, courteous and highly efficient service.

*Send for Our Latest Organization List Which Will Give You Addresses of Our Authorized Distributors*

# The Spike Test Battery *vs.* A Cold Morning

## The Mac-Lar Battery Fuses Steel in a Few Seconds

Demonstrate this fact in your own garage with the "Spike" Test.

Two pliers and two 20-penny spikes are the only tools required. Hold a spike to each of the terminals by means of the pliers. Short circuit the battery by touching the free ends of the spikes. Instantly the spikes turn red. A few seconds more and they are literally burning up.

## Our 18 months' written guarantee protects you.

Three advantages, combined exclusively in the Mac-Lar, insure this strength and durability. First, extremely hard plates make for long life. Second, it has 25% extra capacity for the same plate area, and a higher momentary discharge rate than any soft plate battery. Third, its recharging efficiency is unusually high.

***Mac-Lar fits 99 automobiles out of every hundred.***

***It replaces more than 51 combinations and shapes of other batteries.***

**Four standard models, built in 6 and 12-volt shapes, make possible this universal replacement.**
**The 6-volt Mac-Lar sells for $25; the 12-volt for $36.**

The Mac-Lar Master Storage Battery is built complete in our own factory by men with years of experience in the manufacture and merchandising of automobile storage batteries. The Mac-Lar is built for you—**A Dependable Replacement Battery.**

**Your territory may still be open. Our sales plan will appeal to you. Write or wire for our dealer proposition.**

**MAC-LAR BATTERY COMPANY, INC., Detroit, U. S. A.**

# Do You Want

## A BETTER BATTERY AT A BETTER PRICE

*How many times have you heard the expression:*

*"Take it from me, Bill, they don't make good batteries any more"?*

*Fundamentally, there are three reasons for this condition:*

*1st. The car manufacturer, as a rule, does not allow enough space to carry a battery of sufficient size and power.*

*2nd. The average battery manufacturer wants the car manufacturer's business—price talks—result, the average battery.*

*3rd. Various batteries are made and assembled by piece work.*

Our new service plan enables you to buy M & M Storage Batteries at a discount of

## 50%–10%–5%

**A REAL GUARANTEE**

If an M. & M. battery fails to develop at least 80% of its efficiency at the end of one year, said battery will be restored to at least 80% of its original capacity.

In building an M. & M. battery, the best obtainable material is used irregardless of cost. This material is then assembled by mechanics paid by the hour and not by the piece. This method produces the old-time battery that will stand up from two to four years.

Wherever it is possible we are using an oversized battery that carries a plate 5/8 of an inch higher, thus insuring the car owner a better bet for his money.

### Willys Corporation Acquires More Land

John N. Willys, president of the Willys Corp., has made public further plans for the expansion of the plant at Elizabeth, N. J., where the corporation's new six-cylinder car is being manufactured.

"With the acquisition of the tract of land immediately adjoining our other property, formerly that of the Duesenberg Motor Corp., all the ground required for our additional factory buildings has been obtained," said Mr. Willys. "The work of construction will be launched immediately.

"The outlined plans provide for new buildings and equipment, which will make this plant one of the largest in the industry. These plans will necessitate an expenditure of many millions.

"One of the several additions, plans for which have already been drawn, will be 1800 feet long and four stories high. This will be utilized for final assembly.

"There will be a second large building several hundred feet in length and three stories high, and nineteen smaller buildings of two floors.

"All buildings will be constructed of concrete and brick, and will be of the latest modern industrial architecture. These will be absolutely fireproof, and will be in keeping with the general appearance of the present buildings, which were erected at a large cost.

"On the newly-acquired plot of ground, an assembly hall and recreation center for our employees will be erected. The hall will contain a miniature theater and a recreation floor, and will provide forms of recreation which will make it an ideal club house. Here also will be installed a cafeteria, in which meals will be served the factory workers.

"The buildings will be so placed as to provide for the latest methods in progressive assembly. The material will be moved from building to building as manufacturing process requires, by means of chains and rollers. Beginning in the department where it is received, consecutive operations will carry the material through to the loading platforms, a finished car.

"The work of construction will be completed as rapidly as possible. Installation of machinery will follow immediately."

### Changes in the Personnel of Timken

The newly-organized section of the sales department of the Timken Roller Bearing Co., at Canton, has been put under the management of Fred A. Cornell. This section is the Machinery and Industrial Appliance Division. Mr. Cornell has been Eastern Representative with headquarters at Buffalo for the past three years.

Judd W. Spray, former Western Representative, has been transferred to Detroit as Central Representative, with offices at 701 Book Bldg.

Richard Creifelds, Jr., is now Western Representative, with headquarters at Timken offices in Peoples Gas Bldg., Chicago.

### Metz to Represent Burd in Iowa

W. H. Metz, former representative of the Burd High Compression Ring Co., in the Detroit district, but for the past year and a half in the government service, has been appointed district agent for the state of Iowa with headquarters at 704 Park Bldg., Des Moines.

### Will Make 20,000 Cars at St. Louis

The St. Louis Car Co., St. Louis, Mo., has just closed contracts to manufacture 20,000 motor cars for the Skelton Motor Corp., a company recently organized by Dr. L. S. Skelton. Production will start at once. The car company will convert for automobile manufacture its facilities that have been used for munitions and other war work. The new car will be of the light 4-cylinder type and will be designed to compete with the popular-priced standard cars.

### J & D Tire Now McClaren Rubber

The name of the J & D Tire Co., Charlotte, N. C., has been changed to McClaren Rubber Co., manufacturers of McClaren tires, with H. L. McClaren, former president and general manager of the Racine & Ajax Rubber Companies, as president and treasurer of the corporation. This move has been looked for ever since McClaren took active charge of the J & D organization some time ago.

Simultaneously with this announcement comes word also that the McClaren Rubber Co. will at once broaden out its manufacturing and sales policies in order to provide for increased business. Additions will immediately be made to the factory to take care of greater production and the sales organization is now laying the foundation for a sweeping distribution policy which will cover the entire United States.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, etc., required by the Act of Congress of August 24, 1912, of MOTOR RECORD, published monthly at New York, N. Y., for October 1, 1919.

State of New York } ss.:
County of New York }

Before me, a Commissioner of Deeds, in and for the State and city aforesaid, personally appeared Arthur D. Ferguson, who, having been duly sworn according to law, deposes and says that he is the President and General Manager of the Ferguson Publishing Company (Publishers of MOTOR RECORD), and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are: Publisher, The Ferguson Publishing Company, 90 West Street, New York, N. Y.; Editor, Edward G. Ingram, Nyack, N. Y.; Managing Editor, H. S. D. Ferguson, 452 State Street, Flushing, N. Y.; Business Manager, Arthur D. Ferguson, 244 Park Hill Avenue, Yonkers, N. Y.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.) Ferguson Publishing Company, 90 West Street, New York, N. Y.; Arthur D. Ferguson, 244 Park Hill Avenue, Yonkers, N. Y.; George Reith, 74 Broadway, New York, N. Y.; Trygve Barth, 74 Broadway, New York, N. Y.; Norwegian-American Securities Corp., 74 Broadway, New York, N. Y. The stockholders of the Norwegian-American Securities Corporation are: Trygve Barth, 74 Broadway, New York, N. Y.; Lief H. Strom, 74 Broadway, New York, N. Y.; Bjarne Kroeplien, 74 Broadway, New York, N. Y.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: Norwegian-American Securities Corporation, 74 Broadway, New York, N. Y.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is..... (This information is required from daily publications only.)

ARTHUR D. FERGUSON,
President and General Manager.

Sworn to and subscribed before me this 30th day of September, 1919.

[Seal.] ROSANNA H. FOSTER,
Commissioner of Deeds.

City of New York, residing in Kings County. Kings County Clerk, No. 83: Register No. 1012. New York County Clerk, No. 41: Register No. 21021. (My commission expires March 18, 1921.)

# Battery Life Depends upon INSULATION

1

There's only one sure-fire preventive against aging on the shelf—that is to store the batteries in true bone-dry condition, which is possible only with the Willard Battery containing Threaded Rubber Insulation.

2

The life of the battery is largely up to the man in the car, but Threaded Rubber Insulation adds greatly to its chance of long service, because it removes one of the commonest causes of battery trouble—breaking down of the insulation.

3

Nearly every battery with *ordinary* insulation has to be re-insulated at least once during its lifetime. Willard Threaded Rubber Insulation never has to be replaced.

Threaded Rubber Insulation has these three distinct advantages over any other:

### 1. Threaded Rubber Insulation eliminates depreciation in the dealer's stock.

Willard Batteries with Threaded Rubber Insulation, since they have no wood insulation in any form, can be shipped and stored bone dry—since neither plates nor insulation in the battery have ever been wet.

The storage battery with wood insulation in any form can not be kept in a dealer's stock without depreciation, because wood insulation must be put into the battery wet at the factory, and, once the insulation is wet, a continuous chemical action begins; and furthermore, the insulation can not be allowed to be dried out, as it would become damaged. Hence the battery must soon be filled.

### 2. Threaded Rubber Insulation returns bigger dividends to the user.

Threaded Rubber Insulation is a manufactured product held to rigid uniformity, more durable and long-lived than any wood can be. The car owner is not wholly relieved of caring for his battery, but the battery will stand more abuse, and function at high efficiency for a much longer time.

### 3. Threaded Rubber Insulation makes reinsulation unnecessary.

When installed in the car no one can say just how soon wood insulation will begin to break down, on account of the impossibility of securing absolute uniformity in wood, since it is the product of nature, not of scientific manufacture. During this period even careful driving and faithful attention to battery care will not absolutely insure long life.

Re-insulation—at considerable expense—is almost certain to come before the ordinary battery is worn out, and the life of any battery after re-insulation is uncertain.

*Threaded Rubber Insulation outlasts the plates and re-insulation is, therefore, unnecessary.*

# ist Price of Storage Batteries for Cars From 1912 to 1919

## REVISED MONTHLY

**O USE THIS TABLE.**—These prices are consumers prices of standard batteries, F.O.B. Home Office. Freight or express charges will have to be added. Weight of battery is given purpose. Look in Electrical Specifications Department for name and year and model of car: Find the serial number under the battery desired; look in this table for that serial and you will find the battery that will fit that car. Be sure and give the type number and order, or part number, in ordering. Do not pay any attention to serial number, as reated by us to enable you to find the right battery quickly Prices here given are taken from the latest price lists we have been able to obtain from manufacturers, and will itted to manufacturers each month for revision. This compilation is for the benefit of the trade. We have used every care to give the latest, authentic information, but we uarantee the correctness of these prices and cannot be held liable for same.

Nearly 2300 USL Service Stations and Dealers. A nation-wide service.

# You are protected by USL Service Station Standards

USL Service Stations do more than merely examine your battery-connections, take hydrometer readings and add water if needed.

These Stations everywhere are governed by the USL high standards of practice.

If you need a new battery, any USL Service Station will sell you a *USL "Dry-Charged" battery* whose life begins the day it goes into your car. It will be neither shelf-worn nor shop-worn. It will contain the *exclusive USL machine-pasted plates* making it possible to sell the battery on the guaranteed adjustment plan.

You can depend upon any USL Service Station and dealers in your own town, and in nearly 2300 others throughout the land.

THESE ARE OUR INSTRUCTIONS TO USL SERVICE STATIONS

Do not sell a *new* battery if you can give the owner better value by repairing his *old* one.

Give an eight months' guarantee covering every repair.

If a repair cannot be guaranteed, do not make it and show the owner why.

Supply for replacement the exact size and type of battery designed to go in the car.

Before making a repair or placing a new battery in a car, check up the operation of the other electrical units. You are responsible to the owner for satisfactory operation of the battery regardless of conditions outside of it.

Remember that your job is to render *dependable service*, and that "the longer you can make the *old* battery last, the surer you are of eventually selling the owner a *new* one."

**U. S. Light & Heat Corporation, Niagara Falls, N. Y.**

USL TRADE MARK
U.S. LIGHT & HEAT CORPORATION

FREE *Our 50-cent Battery Book* [illegible] *every battery question. It's a book you can't afford to be without if you own or drive an automobile. It's free if you mention the make and model of your car.*

### Trucks to Run on Railroads

The Four Wheel Auto Co. of Cliftonville, Wis., manufacturer of the FWD truck, is testing out a new type of motor vehicle designed for use on railroad tracks. The new design so far has exceeded expectations as to performance and utility and is attracting wide attention among railroad officials. The experimental car is a standard 3½-ton FWD chassis, with flanged wheels and having regulation automatic couplers at front and rear.

### Must Mark Rebuilt Tires

Selling rebuilt or reconstructed motor car tires without "plainly and prominently indicating on the tire" that it is rebuilt or reconstructed, has been found unfair competition in violation of the law. The Federal Trade Commission has ordered the Akron Tire Co., Long Island City, N. Y., to discontinue the practice.

### Packard Opens Service Station

The Packard Motor Car Co. has commenced construction of a two-floor service building at Thirty-seventh Street and Princeton Avenue, Chicago, Ill., which will have a total of 167,000 square feet of floor space. It will be the largest and best equipped service station in that city. Construction work will be finished early in the spring.

J. F. Page has been appointed general manager, service division of the local Packard branch, succeeding W. A. Turgeon, who resigned to engage in other work. Page was until recently a major in the personnel division of the army. Turgeon was one of the oldest Packard employes, having been with the organization since its early days.

To simplify and facilitate the distribution of Veedol motor oil and Tydol gasoline, the Tide Water Oil Co., New York City, has decided to have these sold through a strictly marketing company. With this in view, the Tide Water Oil Sales Corp., 11 Broadway, New York City, has been organized to handle these products throughout the United States and Canada.

## AUTOMOBILE CALENDAR

NEW YORK CITY—Automobile Salon, Hotel Commodore; November 16-23.

NEW YORK CITY—Automobile Show, auspices National Automobile Chamber of Commerce; S. A. Miles, Manager; Grand Central Palace; January 3-10.

NEW YORK CITY—Commercial Car and Accessory Show, Eighth Coast Artillery Armory; January 3-10.

CLEVELAND, OHIO—Nineteenth Annual Show, Cleveland Automobile Mfrs. and Dealers' Assn.; Wigmore Coliseum; January 17-24.

CHICAGO, ILL.—Automobile Show, auspices National Automobile Chamber of Commerce, Coliseum; S. A. Miles, Manager; January 24-31.

CHICAGO, ILL.—Truck Show, auspices National Automobile Chamber of Commerce, Drexel Pavilion; S. A. Miles, Manager; January 24-31.

DEADWOOD, S. D.—Automobile Show, Deadwood Business Club; F. R. Baldwin, Manager; February.

KANSAS CITY, MO.—Fifth Annual Tractor Show, Kansas City Tractor Club; Guy H. Hall, Manager; February.

WICHITA, KAN.—Tractor and Farm Machinery Show, Forum, Wichita Thresher-Tractor Club; February 9-11.

NASHVILLE, TENN.—Automobile Show, auspices Nashville Automobile Trade Assn.; February 9-14.

LOUISVILLE, KY.—Twelfth Annual Exhibition Louisville Automobile Dealers' Assn., First Regiment Armory; February 23-28.

### Carolina Dealers Form Organization

The Carolinas Automotive Dealers Association was formally organized at Charlotte, N. C., recently. Automobile dealers from all parts of the two Carolinas adopted the report of a nominating committee as to officers for the new association. The conference also formulated the principles that will be embodied in the by-laws and constitution.

The officers elected for the new association were: President, Lee A. Folger of Charlotte; vice-president, A. M. Gibbes, Columbia, S. C.; second vice-president, H. S. Dowling, Charlotte. The secretary-treasurer will be named by the directors.

### St. Louis Tire Men Organize

Permanent organization of the St. Louis Tire Dealers' Association, St. Louis, Mo., has been effected by the adoption of the constitution and by-laws and the election of the following officers: President, Joseph Roberts, Roberts Tire Co.; vice-president, Maurice Altheimer, Hirsch-Altheimer Tire Co.; treasurer, E. G. Hefter, Great Western Tire Corp.; secretary, Robert E. Lee; sergeant-at-arms, Arthur Fishell, Fishell Tire Service Co.; directors, Joseph Sacks, Reliable Auto Tire Co.; Art B. Mooney, Art B. Mooney Tire Co.; I. Reifler, Independent Tire Co., and J. P. Hartmann, Hartmann Tire Service Co.

# List-Prices of all Makes of Tires and Tubes

## REVISED MONTHLY

EXPLANATION:—Under each size we have placed the list price of not only Casings, but also Tubes. The letters to the left of the line show the Type of Tread and Color of Tubes. P means Plain Tread; N. S. Non-Skid; G. T Gray Tubes; B. T., Brown Tubes; R. T., Red Tubes; When price is given without letter or sign it means that the tire is manufactured in Clincher, Quick Detachable Clincher, and Straight Side or Dunlop types. When a C appears with the price it means that the tire is made in Clincher type only; when Q, in Quick Detachable only; when D, in Dunlop or Straight Side only; when †, in both Clincher and Quick Detachable; when *, in both Quick Detachable and Dunlop or Straight Side; when §, in both Clincher and Dunlop or Straight Side.

This compilation is for the benefit of the trade. We have used every care to give the latest authentic information, but we do not guarantee the absolute correctness of these prices and cannot be held liable for same. The Ferguson Publishing Co.

# High Mileage Assured

DEPENDABLE tire service is something more than mileage records. It must have quality as well as quantity—give you same confidence in your tires as you have in your motor.

That is exactly the service a McGraw Tire yields. Its mileage is not only high, it is *assured*, as far as humanly possible. There are no weak spots in construction to bring the McGraw to an untimely end. The Duplex Method, a McGraw process of vulcanization, safeguards a flawless build of the tire. Each fabric layer "sets" smooth and even. Mold pinches and fabric buckles are avoided. The tire comes out of the curing molds a perfect structure.

The McGraw Dealers' Franchise Offers an exceptional opportunity for profitable business. Write for details.

***Cords, 8000 Miles*** ***Fabrics, 6000 Miles***

# FEDERAL

## Accessories and Repair Materials

*Ford Fan Belt*

*Repair Gum*

*Safety Step Mat*

THE Federal line of automobile accessories and repair materials is unusual for its high quality, completeness and long service.

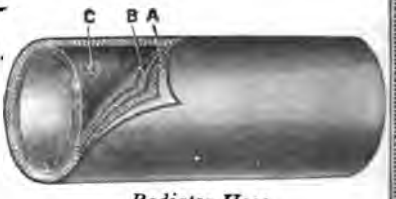
It is, therefore, a representative, highly desirable and profitable line for dealers to handle.

Only a few of the items comprising the entire line are shown here, but we shall be pleased to send complete catalog, prices and discounts to the trade on application.

*Combination Hook-On-Lace-On Boot*

*Retiner*

*Inside Sleeve*



*Radiator Hose*

*Ford Mat*

*Para-tite Repair Material*

*Sealtite Repair Material*

**THE FEDERAL RUBBER COMPANY**
**OF ILLINOIS**
**Factories, Cudahy, Wisconsin**

Manufacturers of Federal Automobile Tires, Tubes and Sundries, Motorcycle, Bicycle and Carriage Tires, Rubber Heels, Fibre Soles, Horse Shoe Pads, Rubber Matting and Mechanical Rubber Goods

Digitized by Google

THERE is about as much metal in a nickel as there is in a five-dollar gold piece—and there is about the same amount of material in the ordinary tire as there is in a Kelly. But when it comes to spending the nickel, or trying to get Kelly mileage out of low-priced tires, the difference becomes apparent.

# BILTWELL TIRES

## "MASTER OF THE ROAD"

### LONG SERVICE
of
### BILTWELL TIRES
**Lies in**

— the rich quality of materials used.

— the expert workmanship incorporated in their manufacture.

— the fact that they are extra well reinforced where stresses are applied.

— and the fact that the last word in rubber-making machinery is used in their construction.

*Some attractive territory is still available for the man who wants the best.*

**THE BILTWELL TIRE & RUBBER CO.**

**MADE AT AKRON**

# GLOBE CORDS

## GUARANTEED 8000 MILES

**FABRIC TIRES 6000 MILES**

# Economy through Quality

Hand-made Globe Tires—Cord or fabric—cost about 10% more to make than ordinary tires, but they give the user about 50% more miles. Figured on a mileage basis, Globe Tires are the most economical of all.

*To responsible dealers only: If Globe Tires are not represented in your city or town, write us promptly for our exclusive proposition.*

### Special Motor-Driven Drag for Hauling Paper

One solution of the trucking problem has been made by the Drayage Corporation, 324 Pearl St., New York City. This corporation was organized in March, 1918, and shortly following, trucks were built after the plans formulated by E. O. Dorman, who is secretary-treasurer of this organization.

These trucks are constructed differently from the usual truck to meet the specific requirements of the paper merchants. According to Mr. Dorman, the advantages of these trucks are as follows:—

"Because of the fact that the trailers of the trucks are built near the ground, there is no danger of breakage when the paper is being unloaded. Moreover, because of this same fact, that the trailers are only three feet from the ground, it is possible to pull the truck up to a warehouse door and unload easily and quickly. The trucks are of 10-ton capacity, and we have found that our trucking costs are cheaper than that done by any trucking company in this city.

"Moreover," Mr. Dorman continued, "the traffic condition in New York City is such that there is no advantage of having a light truck, as far as speed in transportation is concerned, because the delays are due chiefly to congestion of traffic which hold up a small truck as long as a large one."

These trucks are thirty feet long, of the trailer type. There are two wheels in front which are driven by electricity by a controller like a trolley car. This electric control does not entail a change of gears as is needed in ordinary trucks, which prolongs the life of the tires. The trailer wheels are forty-two inches in diameter and ten inches wide. The body of the truck was built by the Shadbolt Manufacturing Company of Brooklyn.

According to Mr. H. J. Wareing of the Drayage Corporation, it is possible to clean up the average car of forty tons within two or three hours with these trucks. Three such trucks are owned by the corporation at present, and at the July meeting of the directors of the company it was decided to build three more, which is an excellent proof of the efficiency of these vehicles.—From *The Paper Mill.*

### Northern Wheel Factory

The Northern Wheel Co., Alma, Mich., has let the contract for the first unit of its $1,000,000 factory and work will start at once. The plant will be in operation December 1. It will be constructed of brick and concrete and will be 80 x 304 ft.

### McCord Issues New Catalog

The McCord Manufacturing Company of Detroit has published a catalog completely describing and giving the specifications for all the various copper-asbestos gaskets which it manufactures. Included are spark plug gaskets, exhaust and flange type gaskets, exhaust manifold gaskets, cylinder head gaskets for passenger cars, cylinder head gaskets for trucks, valve plate gaskets and Ford gaskets. An assortment of shim stock is also shown as well as miscellaneous gaskets of open and closed types.

### Will Test Storage Battery of Ex-German Submarine

Under advice from the Navy Department, Bureau of Steam Engineering, the Prest-O-Lite laboratories at Indianapolis are making a series of tests on German submarine batteries.

### Stutz Sales Pass $3,000,000

Net sales of the Stutz Motor Co. of Indianapolis for the first six months ending June 30, 1919, are reported to have been $3,674,848. On this basis it is estimated that the total for this year will exceed $7,000,000.

### Knox Motors Plant Sold

Announcement is made of the sale of the plant of the Knox Motors Co., Springfield, Mass., to Neil R. Sinclair of New York, president of the Militor Motors Corp.

In disposing of the plant, the Knox Motors Co. reserves the right to use a part of the buildings for its needs for a period of two years.

The Knox Motors Co. has been identified with the motor industry since its infancy, and will continue the manufacture of its present products, as well as parts for its former models at the Springfield plant. It is understood that the company has plans under consideration which will increase and round out its present lines.

### Puritan Machine Company Takes Over Weston-Mott Axle Service

The Puritan Machine Co., Lafayette Blvd. and Tenth Street, Detroit, has acquired from the General Motors Corp. the axle business of the Weston-Mott Co., Flint, Mich.,—one of the General Motors subsidiary plants.

The Puritan Co. is moving the stock to its main plant at Detroit, from which point they will distribute service repair parts for Weston-Mott axles.

The Victor Rubber Co., Springfield, Ohio, is erecting a plant which will permit double production. The first building of the new program was completed early in the year. The cord tire department is just being moved into the second building, and a vulcanizing addition is under construction. For the past several months the plant has been operating at capacity of 23 hours per day, with three shifts.

Edward V. Hartford, Inc., is moving to a new factory at Jersey City, N. J., with increased facilities which will permit the company to double production. The company will open offices at 35 Warren Street, New York City.

Work is being rushed on the new plant of the Kelly-Springfield Tire Co. at Cumberland, Md., and operation will get under way early in 1920. This plant will treble the present capacity.

The Kardell Tractor & Truck Co., St. Louis, a $1,000,000 Delaware corporation, has commenced the manufacture of farm tractors, occupying the plant formerly owned by the Whitman Agricultural Co. at 6900 South Broadway, which has 175,000 square feet of floor space.

The Transport Truck Co., Mt. Pleasant, Mich., has moved into its new plant, which covers a 21-acre tract. The company is planning an immediate production of ten trucks daily of its three models, a 1-ton, 1½-ton and a 2-ton job. The selling range is from $1650 to $2585. The company proposes to double its output within six months.

### Tax on Tractors in Illinois

According to the new automobile laws passed recently in Illinois, which becomes effective Jan. 1, 1920, a tax of $25 a year will be imposed on tractors, traction engines or similar devices.

### Waterloo Has New General Manager

Allen H. Head has been appointed general manager of the Waterloo Gasoline Engine Co., Waterloo, Iowa. He succeeds J. E. Johnson, who requested relief from his responsibilities some months ago in order that he might give his attention to private interests.

### Deere Factory Makes Changes

The John Deere Plow Works, Moline, Ill., has just announced four important changes in its personnel. H. B. Dinneen, former manager of the Moline plant, has been made assistant to R. W. Lea, vice-president of the Moline Plow Co. He has been succeeded by B. J. Kough, who was manager of the Marseilles plant. Mr. Kough entered the service of the company as a helper in the blacksmith shop in 1904. In 1917 he became manager of the Marseilles plant. C. H. Gamble, formerly superintendent of the plow works, has been made Mr. Kough's successor and is now manager of the Marseilles plant. He began work with the company in the experimental department in 1906 and became superintendent of the plow factory in 1918. L. A. Rowland has been promoted from assistant superintendent of the plow works to superintendent. F. M. Humanson has succeeded to the assistant superintendency of the plow works. He has had seventeen years of service at the factory.

### Enlarge Branch for Fordson Tractor

Plans for the enlargement of the Milwaukee plant of the Ford Motor Co., at an estimated cost of $1,000,000, largely for the purpose of handling the work of assembling and distributing the Fordson tractor in the Wisconsin and upper Michigan territory, have been made public. According to A. W. L. Gilpin, manager of the Milwaukee branch of the Ford, the Fordson organization will undergo a change on August 1, 1920, by which the established local branches will relieve the main works at Detroit of final assembling as well as marketing processes. The present Milwaukee plant will be duplicated in size by construction on adjoining acreage originally acquired.

### M. A. M. A. Sanctions Boston Show

The Motor and Accessories Manufacturers' Association, New York City, has issued a sanction for the Boston Show. This organization participates in the New York and Chicago shows, but does not have anything to do with any others, except the Boston exhibit. In past years Boston used to have a M. A. M. A. sanction, and then for a number of years operated without one, but later secured a sanction, which since then has been consecutively granted.

### Set Limit on Car Sales

Government owned cars which are being sold at public auction cannot be sold to persons who, as officers, or agents of the government, were in any way connected with the purchase of the automobiles, or are connected with their sale, according to a ruling by the secretary of war.

### Case and Wallis Tractors Combine

The J. I. Case Plow Works and the Wallis Tractor Co., both of Racine, Wis., have consolidated under the name of the J. I. Case Plow Works Co., with capitalization of $10,000,000. With the additional capital, factory space will be enlarged and production increased.

H. M. Wallis will head the concern, with H. M. Wallis, Jr., as his assistant. Other officers are: Vice-president, L. N. Burns; treasurer, W. M. LaVenture; secretary, M. E. Erskine; auditor, G. A. Filer; cashier, G. H. Bolton, and assistant secretary, Charles E. Pain, Jr. The officers and C. F. Glore, Henry R. Platt, William A. Tilden and W. C. Quarles complete the board of directors.

### Harris and Armstrong Join Cleveland Rubber

Archer H. Harris, formerly with several of the large rubber and tire factories of Akron and Youngstown, has joined the Cleveland Rubber Corporation Co. Mr. Harris has been connected with the Firestone Tire & Rubber Co., B. F. Goodrich Co., Goodyear Tire & Rubber Co. and Republic Rubber Co. With the Republic Rubber Co. he was director and general superintendent for a number of years. E. A. Armstrong has also joined the company.

### Vim Tractor Expanding

The Vim Tractor Co. at Schleisingerville, Wis., which was organized some time ago out of the former Standard Machinery Co., manufacturer of gas engines, will start work soon on a large machine shop and assembling floor costing about $75,000, to provide an increase of 50 to 75 per cent in the existing capacity.

The Dominion Tire Co., 149 Strange Street, Kitchener, Ont., will erect a $150,000 addition to its factory.

### Lines Manages Gordon Sales

Mr. M. S. Lines, who for the past two years has been special sales representative in the eastern states for the Gordon Tire & Rubber Company, Canton, Ohio, has been moved up to the management of sales for that company, succeeding A. W. Senz, who has resigned to become associated with The L. & M. Rubber Co.

Mr. Lines, previous to his association with the Gordon Tire & Rubber Co., was for seven years connected with the Michelin Tire Co. in the sales department.

### Haynes Company Promotes J. A. Benell

J. A. Benell, formerly special representative of the Haynes Automobile Co., Kokomo, Ind., is now assistant general manager. Soon after Mr. Benell was called from the road to assume duties at the Haynes factory he was made assistant to A. G. Seiberling, vice-president and general manager of the company. Because of his wide experience in the manufacturing business and thorough knowledge of efficient factory and office methods, he was quickly promoted to the office of assistant general manager.

### Issues Bulletin on Single-Phase Motors

A bulletin on single-phase motors has just been issued by the Wagner Electric Mfg. Co., St. Louis, Mo.

# BEARING DATA SECTION

this section we have published the type number of both Ball and Roller Bearings used in about 3,000 models of Passenger Cars and Trucks from 1909 to 1919. Where Bearings are used by the number of the bearing is given. Where Roller Bearings are used both the name of the bearing and the number are given.

## EQUIVALENT TABLE OF ANNULAR BEARINGS

Annular Ball Bearings are interchangeable. Below is a table showing the type number of each manufacturer equivalent to numbers we have used, which appear in the column.

FF—Reverse Idler Gear.

**FAN BEARINGS**
GG—Hub Bearing.
HH—Water Pump Shaft Bearing.
JJ—Air Pump Shaft Bearing.

**STEERING POST**
KK—Thrust Upper.
LL—Thrust Lower.

TO USE THIS TABLE—Look in the key for the particular bearing you desire; note the letters in front of the bearing; find the car the ediately follows the name of the car, follow it until you find the letters shown in the key—the number immediately following is the key the bearing that we have used, turn to the equivalent table at beginning of Bearing Section; the key number is in the first column; by cross you can obtain the type number of any manufacturer you desire. Ball bearings of all makes are interchangeable—we, therefore, give mber. In some instances you will find as follows: 307 x 1 *Y*″; this means, 307 bearing with a special width, namely, 1 *Y*″ wide instead of width employed. Where the letters B, C, N, D or T appear after the bearing, that letter must be used in ordering, as it is part of the manu- lesignation number.

ller Bearings, we give the name of the manufacturer, followed by the number, as (Hy. 16727) meaning, Hyatt bearing No. 16727. Timken n be supplied in parts, being composed of cone and cup. The numbers given show the cone first, as (5351-5320), 5351 being the cone and 5320 Where Timken Bearings immediately follow name of car and model, and before any letter is used, it means that all bearings mentioned in are Timken Rollers.

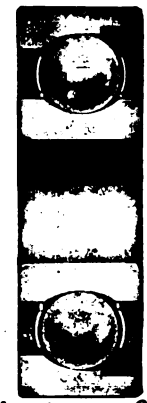
# FAFNIR

*Single Row Radial (Medium) 200 Series*

*Double Row Radial (Medium) 6300N Series*

*Double Row Radio Thrust (Medium) 8300 Series*



*Magneto or Open Type (Extra Light) 5100 Series*

## Fafnir Single Row Bearings Series 200, 300, 400.

Complete factory stock carried. These interchange with single row series of all standard makes.

## Fafnir Double Row Bearings Series 6200N, 6300N, 6400N.

Stocks carried of all most called for sizes. These bearings interchange with American width double row bearings.

## Fafnir Double Row Angular Contact Bearings 8200, 8300, 8400

These bearings have same dimensions as 6000N Series. They are designed to take exceptionally heavy thrust loads in addition to radial loads.

## Fafnir Magneto Type Bearings 5100, 5200, 5300 Series.

These bearings are largely used in magnetos and starting and lighting units.

### *Largest Assortment of Types and Sizes in America*

*Following is a list of distributors of Fafnir Ball Bearings. Substantial stocks are carried by all distributors and prompt and efficient service will be rendered by them on receipt of orders and inquiries.*

# BY HYATT

## Also Authorized by Timken and New Departure

The Hyatt Roller Bearing Company of Newark, N. J., has only one authorized service organization and this is the Bearings Service Company with 26 branches and over 900 Authorized Distributors.

You may rest assured that the service rendered by the Bearings Service Company is official; that the Hyatt Bearings you receive from this Company are genuine.

This is the only authorized service organization for the manufacturers of Timken, Hyatt and New Departure Bearings.

## BEARINGS SERVICE COMPANY

*General Offices:* Detroit, Michigan

*Branches in:*

San Francisco
Indianapolis

## *The* DOUBLE ROW *Type.*

HERE, at last, is a bearing for resisting thrust stresses as well as radial loads, which is entirely free from destructive or deterrent effects in either theory or practice.

We have shown how other types of bearings develop tendencies which interfere with the primary function of reducing friction between moving parts.

Due to the angular contact of ball with race, this bearing takes radial loads and thrusts in any combination, and yet the balls always roll freely and in their natural paths. This is because the pressure is always "end-on," perpendicular to the axis of rotation.

*No wedging, no binding, no cramping.*

THE NEW DEPARTURE MFG. CO.,
Bristol, Conn. 464 Detroit, Mich.

MARLIN

# Production Multiplied Over Seven Times

SRB

Single Row Double Row

## ANNULAR BALL BEARINGS

BY January, 1920, capacity of production of S. R. B. Ball Bearings will be seven times as great as in January, 1919, at which time production had been already restored to a normal and satisfactory basis after the curtailment of manufacture during the war.

STEP by step in anticipation of the fast mounting requirements of automobile, truck, tractor and other industries, S. R. B. production has been and is being aggressivly brought up, as results of improved facilities, plant extensions and increased equipment. All this with every care to maintain the quality which has made S. R. B. Bearings integral parts of those passenger and commercial vehicles and tractors whose names are instantly thought of as leaders in their respective fields.

IN view of the great proportions which the manufacture and sales of S. R. B. Bearings are assuming, it has been determined to combine the various properties engaged therein into a new company to be known as Standard Steel and Bearings Incorporated. This company consolidates into one operating unit the Braeburn Steel Company, Pittsburg, where all the High-Chrome-High-Carbon Steel for S. R. B. Bearings is made; the Standard Roller Bearing Company, Philadelphia, and the Plainville and other New England plants which are producing and being brought into production on S. R. B. Bearings.

**STANDARD STEEL AND BEARINGS Incorporated**

Standard Roller Bearing Company — Braeburn Steel Company

Owned and Operated by

**MARLIN-ROCKWELL CORPORATION**

Executive Offices:

# Simplicity

Gurney Ball Bearings simplify machine design because both radial and thrust loads are carried on a single bearing, on a single row of balls.

The ability of Gurney Ball Bearings to carry loads up to 40 tons or speeds up to 40,000 R. P. M. (but not, of necessity, on the same bearing!) has been amply demonstrated.

They do it by reason of certain inherent qualities, the greatest number of balls of maximum size, and raceways properly fitted to the character of the service required.

Our Engineering Service Department, with its vast store of data, and its seventeen years of experience in the adaptation of ball bearings to a multitude of conditions, is at your service.
